MY22 - Changes & Model Overview

MY22 Changes	
Engines	Carry-over from MY21
Models	Carry-over from MY21
Now Standard	ED4 standard for all CA CV PV (change implemented in MY21 already) EW6 Pre-installation for Mercedes me remote services
Packages	X05 Package discontinued (S23 available as option, Y2A discontinued) C02/CA2 - ordering might be partially restricted due to semi-conductor shortage
RV Bundles	2 RV Bundles are now available for Cargo and CC 6cyl Diesel models
Optional Features	Suspension Offerings updated (see suspension matrix for comprehensive overview)
	S23 now available as standalone option (X05 package discontinued)
	E3M JK5 JB4 now available outside of C02/CA2 - ordering might be partially restricted due to semi-conductor shortage
	E1G replaced with EY2 - same functionality (available in package only)
	X2R available for all diesel CA/CC; not available for 3500/3500XD/4500 144" wheelbase
	B01 available for all engines on CA/CV/CC; not available for 3500/3500XD/4500 144" wheelbase
	CB4 available for all 6cyl diesel CA/CC models
	New options shown in DOG but SOP pending:
	E1X MBUX 6-hour runtime
	E1R Additional Fuses (40/80/150/100 Ampere)
	E1Y Additional Fuses (40/80/80/100 Ampere)
Others	Updated Suspension Matrix and product detail RV Bundles

Suspension Details

Standard Suspensions and Options			
Code	Title	Details	
A50	Front axle reinforced	Includes an increased load capacity of the front axle, where heavier bodies and equipment can be fitted. The higher capacity front axle caters to heavier cabs and heavier special equipment (e.g. for fire-fighting vehicles and ambulances).	
No Factory Code	Base Standard Factory Suspension	Description	Ride comfort due to reduced roll stabilization.
		Benefit	The Base Standard Factory suspension, has an adapted front suspension for a lower and more comfortable entry. With the removal of the rear stabilization bar it allows for an overall comfortable ride with reduced roll.
CB7	Stabilization Level I	Description	Roll Stabilization with height body damping
		Benefit	CB7 compensates for rolling behavior due to higher center of gravity of loads or bodies. Torsion bars with an increased diameter are added to the front and rear axels. Furthermore, shock absorbers with an adapted characteristic are installed.
CB8	Stabilization Level II	Description	Enhanced roll stabilization with higher body damping compared to CB7
		Benefit	Additional roll stabilization and body damping compared to CB7. Increases torsion bar diameters at the front and rear axles and provides an adapted shock absorber characteristic. Furthermore, rear axle springs with increased rigidity are installed.
CB4	Stabilization Level III	Description	Designed for vans with a intense rolling behavior due to a much heavier load and higher center of gravity. (i.e. recreational vehicles)
		Benefit	CB4 comes with larger diameter stabilizers, shock absorbers and with characteristics that are adapted for an increased rebound and compression curve. Furthermore, the leaf springs are increased in rigidity.
CB1	Suspension for comfort and load protection	Enhanced comfort due to adapted damper characteristics and the use of progressive spring characteristics.	
CT1	Rear spring vibration absorbers	Includes vibration absorbers fitted on the left and right rear spring and lowers the resonant vibrations of the rear springs, thus hindering noise development.	

Specialized Suspension Options			
Code	Title	Explanation	
CE8	Raised rear body mounts	Raised body on rear axle (35mm/1.4")	
B01	ESP for increased Center of Gravity	Description	Adjusted braking and handling characteristics for vehicles with increased center of gravity.
		Benefit	With code B01, the ESP® is optimized to reduce the vehicles tilt tendency with a total center of gravity of <u>more than 1000 mm (39,4 inches)</u> . It is essential to ensure that the vehicle is equipped with the right suspension and tires. With B01 it is required to also add CB8 or CB4.
X2R	Conversion to RV requirement	MBUX Timed Switch-off extended to 6 hours and B01 is automatically added to this code.	

Rear view camera/head unit plausibility

Cargo Van Floor Variations

Standard	V93	Without factory installed flooring
Options	V43	Wood floor with 6 D-rings
	VK8	Floor covering, plastic

Note: see restrictions in combination with metallic paint

Special Rule for cargo vans with metallic paint

Paint Code	5890/7755/7992/9197/9775	
Must have one of	V43	Wood floor with 6 D-rings
	VK8	Floor covering, plastic
	ZZ9	No floor covering; requires customer floor installation <i>Package contains:</i> V93 - No factory installed flooring VL4 - Metallic painted floor

Note: Fleet only

Additional comments ZZ9 Package

While applying the required clear coat layer to the metallic painted cargo floor, imperfections could occur. Therefore, we strongly recommend to install flooring in the cargo area for vehicles with a metallic paint.

Please be aware that potential paint appearance, contamination or imperfections of the uncovered cargo floor are not considered a defect and are therefore not reimbursable for repairs.

Tire & Wheel Overview

		1500/2500 Models		
		Standard Tire	RH8	Single tire
		Standard Wheel	RS3	Steel
		Optional Wheel	RL5	Alloy

RF1	Continental	O	O	
RH0	Kumho	n/a	n/a	

To order any of the tire brands above code RM9 has to be added to order.

Hermes Module for Government contracts

Note: municipal and county business is still

Please note that all Sprinter vehicles with the code **JH3** (*communications module LTE – standard equipment for all Sprinter*) are no longer eligible for tenders, sales, and lease or rental contracts with U.S. federal institutions, such as U.S. governmental bodies, U.S. authorities, U.S. embassies and diplomatic missions as well as U.S. armed forces worldwide.

The background is a new U.S. provision that prohibits the U.S. federal government from entering into, extending, or renewing contracts with any entity that uses any equipment, system, or service that uses telecommunication equipment incorporating certain Chinese technology (Interim rule to Section 889(a)(1)(B) of the John S. McCain National Defense Authorization Act for Fiscal Year 2019, published in the U.S. Federal Register on July 14, 2020).

Since Mercedes-Benz Vans vehicles currently do incorporate such covered technology (code JH3), business with U.S. federal contractor is no longer possible. The new rule applies to contracts entered into after **August 13, 2020** or contracts entered into before **August 13, 2020** of which the supply of vehicles takes place after that date.

Ordering

If you are planning to supply a customer out of the above listed groups with Sprinter vans, please be aware that JH3 is standard for all Sprinter models. Therefore, a special ordering process is required. For details, please reach out to your responsible RSM.

Removal of JH3 from stock vehicles

The Hermes Module can be removed from vehicles. Please contact Service & Parts for details.

M40	Alternator 14 V / 200 A	S	S
MG3	2.0L 4-cylinder diesel engine	S	S
MH8	SULEV emissions	S	S
Equipment			
A50	Front axle reinforced	S	S
AR3	Axle ratio 4.182	S	S
BA3	Active Brake Assist	S	S
BH1	Hold Function	S	S
C6L	Multifunction steering wheel	S	S
CB8	Stabilization Level II	S	S
CL1	Adjustable steering wheel (angle)	S	S
D03	High roof	-	S
D93	Omission bulkhead	S	S
E07	Hill Start Assist	S	S
E10	Standard radio	S	S
E1U	USB-C socket, 5 V	S	S
E30	Starter battery disconnect	S	S
E3J	Pre-installation for switch panel	S	S
E40	Trailer hitch prep. wiring	S	S
ED8	Preinstallation PSM	S	S
EE5	Ultracapacitor discharge module	S	S
EK1	Body Builder Connector	S	S
ES0	Jump start terminal	S	S
EW6	Pre-installation for Mercedes me Remote Services	S	S
EY5	Emergency Call System	S	S
EY6	Breakdown management	S	S
F68	Heated & electrically adjustable exterior mirrors	S	S
FF5	Shelf above windshield	S	S
FG8	Cupholder front	S	S
FI1	Remote key (315 mhz) w/central locking	S	S
FJ4	Storage compartment underneath cockpit	S	S
FR3	Rear view camera (rear-view mirror display)	S	S
H21	Windshield with filter band	S	S
HH2	Heater, auxiliary electric hot air	S	S
HH9	Air Condition, Front	S	S
IH7	Head Unit, North America	S	S
J11	Speedometer, miles and km/h	S	S
J55	Seat belt warning for co-driver seat	S	S
J58	Seat belt reminder driver	S	S
J65	Outside temperature gauge	S	S
JA8	Crosswind Assist	S	S
JH3	Communication module (LTE) for dig. services	S	S
JI9	Service interval 20.000 miles	S	S
K56	Red diesel filler cap	S	S
K60	Exhaust straight to rear	S	S
KB7	24.5 gallon fuel tank	S	S
KL1	Aux fuel sending unit w/ fuel tap	S	S
KL5	Fuel filter with water separator	S	S
KP6	3rd generation SCR emission control system	S	S
L65	Interior lights, cargo compartment	S	S
L94	Parking lights deletion	S	S
LA2	Headlight assistant	S	S
LB5	3rd brake light	S	S

"Incomplete Vehicle" Packages - Fleet Only

If any of the below packages are ordered, vehicle will become an "incomplete vehicle"! In this case an upfitter will become the final stage manufacturer. Please note that the involvement of an upfitter is required to register the vehicle. We recommend working with one of our ExpertSolutions Partners.

For questions or further assistance please reach out to: vaninfo@mbusa.com

"RV Bundles" for Cargo and Cab Chassis Models

RV0 and RV1 are bundling essential product features specifically for RV upfits. MBUSA Product Management suggests that these bundles are added to any vehicle that will receive an RV-type upfit in order to allow an easier upfit process, enhanced technical usability as well as an improved driving performance tailored to RV vehicle characteristics.

Ordering Information

U-Codes can be added to the Purchase Order via the VII screen in NetStar OR by emailing the request to MBUSA Van Distribution (vandistribution@mbusa.com)

Don't forget to place your upfit order with the upfitter after you add the U-Code

U-Codes can be added/changed through D40 status. No changes permitted after D41 status

U-Codes will carry over for dealer traded vehicles

Any requests to remove a U-Code must be approved by the Van Distribution & Upfitter Management Departments

**For more information on U-codes, please reach out to the Upfitter Management team:
upfitterinfo@mbusa.com**

All information contained in this Reference Guide is based on the latest product information available at the time of publication. Mercedes-Benz USA, LLC and Daimler Vans USA, LLC reserve the right to make changes at any time, without notice, in colors, materials, equipment, specifications and models.
Prices are manufacturer suggested retail prices and are subject to change.

MY22 Equipment Book

The Sprinter – US Version

©2022 Mercedes-Benz USA, LLC

MY22 Equipment Book - Important Considerations

- Please note that not all codes in this equipment book are necessarily offered for sale in MY22. For details on the latest offered product portfolio and options, please see the DOG or NetStar.
- This equipment book does not contain package code designations (C02, C03 etc.) but rather package code components. When referencing from the MY22 Dealer Ordering Guide, please identify the individual option code in a package, which is explained in the equipment book.
- For a better understanding of the various suspension options and features offered on the Sprinter, please reference the 'Suspension Matrix' in the MY22 Dealer Ordering Guide.

A50	Front Axle Reinforced	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code A50 includes an increased load capacity of the front axle, allowing for heavier bodies and equipment to be upfitted. The higher-capacity front axle caters to heavier cabs and heavy special equipment that is installed

On all 3500 vehicles with gross vehicle weight rating (GVWR) of 9,990 pounds (9,900 lbs for Canada) and 11,030 pounds, the front gross axle weight rating (GAWR) is increased from the standard 4,081 lbs. to 4,409 lbs. On the 4500 vehicles with gross vehicle weight rating (GVWR) of 12,125 pounds the front axle weight rating (GAWR) is increased to 4,630 pounds and A50 is standard

Benefits:

Allows for heavier equipment installation that impose a greater load on the front axle. Front cab can be made heavier and optioned with special equipment.

AP2	Protective U-bar for driveshaft/exhaust extension	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code AP2 includes one safety U-bar for each segment of the power train shaft and for an extended exhaust system to comply with the legal requirements of buses used for commercial passenger transport. This equipment is standard on Passenger vans and an option on Cargo vans.

AR2	Axle Ratio 3.923	Compared to Sprinter 906		
		Carry Over	Advanced	New

Each vehicle is specified with an appropriate final-drive ratio, which depends on model/engine version. The standard final-drive ratio is matched to the particular model version, taking in to account fuel economy, exhaust emissions, torque and maximum speed. However, depending on the actual operating profile, another ratio may be more appropriate.

Benefits:

- Matching of tractive force and top speed to the appropriate application
- Optimization of fuel consumption based on configuration of the drive train, vehicle application and operating rate as well as the topography of transport routes

A lower final-drive ratio provides more torque at the wheels and is recommended e.g., for frequent hill climbing or if the vehicle will be regularly used with a trailer. Although a higher final-drive ratio provides less torque, it offers a higher top speed and is recommended, for example, for constant-speed motorway driving in flat terrain.

AR3	Axle Ratio 4.182	Compared to Sprinter 906		
		Carry Over	Advanced	New

Each vehicle is specified with an appropriate final-drive ratio, which depends on model/engine version. The standard final-drive ratio is matched to the particular model version, taking in to account fuel economy, exhaust emissions, torque and maximum speed. However, depending on the actual operating profile, another ratio may be more appropriate. Benefits:

- Matching of tractive force and top speed to the appropriate application
- Optimization of fuel consumption based on configuration of the drive train, vehicle application and operating rate as well as the topography of transport routes

A lower final-drive ratio provides more torque at the wheels and is recommended e.g., for frequent hill climbing or if the vehicle will be regularly used with a trailer. Although a higher final-drive ratio provides less torque, it offers a higher top speed and is recommended, for example, for constant-speed motorway driving in flat terrain.

B01	ESP for increased Center of Gravity above 39.4"	Compared to Sprinter 906		
		Carry Over	Advanced	New

Ensuring safety and driving comfort with vehicles experiencing a high center of gravity (above 39.4" from the ground). Vehicles with a raised center of gravity due to installed bodies or larger modifications can still enjoy safety and comfort on the road in many different driving situations.

This option will ensure an optimum combination of tires, suspension, Electronic Stability Programme® (ESP9i) and assistance system settings for these vehicles. This is not available on the 3500XD/4500 144" wheelbase cargo and cab chassis.

B25	Electric Parking Brake	Compared to Sprinter 906		
		Carry Over	Advanced	New

The electric parking brake makes it possible to hold the vehicle at a standstill on gradients even without a driver present. The Electronic Stability Program (ESP) activates the left and right rear actuator motor. Activation takes place manually via the electric parking brake switch or automatically when engine is running, driver's seat occupied, gear in position "D" or "R", accelerator pedal depressed or gear lever is moved from position "P"/"D" or "R".

The electric parking brake consists of the following sub functions:

Automatically release parking brake

The release automatic parking brake function is performed as soon as a sufficient level of driving torque is applied to the wheels on the front or rear axles to enable the vehicle to drive off. If the electric parking brake switch is operated and held when driving, the ESP unit recognizes a braking request which results in braking via a service brake. The instrument cluster displays a message and a warning tone is sounded.

Child safety lock

With circuit 15ROFF, operating the electric parking brake switch does not lead to actuation of the parking brake. This should prevent unintended deactivation of the electric parking brake and, as such, serves as an additional protection against the vehicle rolling away on slopes or inclines.

BA3	Active Brake Assist	Compared to Sprinter 906		
		Carry Over	Advanced	New

The Active Brake Assist with cross traffic function continuously checks for a safe distance of the vehicle in front and warns the driver both optically and acoustically of potential collisions (e.g. rear-end collision) with other vehicles, significantly reducing the risk of accident.

In an imminent collision situation, the Active Brake Assist may initiate autonomous braking. To do this, the controller unit evaluates the traffic situation in front of the vehicle. Respective warnings are issued starting from vehicle speed of 4 mph (7 km/h). If the driver reacts to the acoustic warning and brakes, they will be assisted by the Brake Assist. This calculates the required brake force amplification according to the situation. Autonomous partial braking is also initiated if there is no reaction from the driver to the warnings. The system also recognizes pedestrians who are in the hazard area of the vehicle in speed range of 4 mph (7 km/h) to 37 mph (60 km/h).

The assistance system is operated via the multifunctional steering wheel and if ordered, via the multimedia system. The driver may choose from three sensitivity/warning settings: “early”, “medium”, and “late”. The system is automatically set to “medium” with every vehicle start. The assistance system can also be deactivated, which results in the corresponding warning symbol lighting up in the multifunctional.

BA9	Pre-Installation for Rail Vehicle/ Vehicle with Inter-Axle Lock	Compared to Sprinter 906		
		Carry Over	Advanced	New

The pre-installation includes a wiring harness with the possibility to connect e.g. the signal of active longitudinal lock. This allows a temporarily deactivation of the Electronic stability program (ESP®).

BE2	Handbrake Lever, Folding	Compared to Sprinter 906		
		Carry Over	Advanced	New

Installation of an adjustable parking brake lever. This parking brake lever can be lowered even when the parking brake is on.

Benefits:

Allows a driver’s seat to be swiveled when the parking brake is engaged.

BH1	Hold Function	Compared to Sprinter 906		
		Carry Over	Advanced	New

The HOLD function assists the driver during waiting times in traffic or when starting off on a hill. The HOLD function is activated by quickly pressing down hard on the actuated brake pedal after coming to a standstill. Successful activation of the HOLD function is indicated in the instrument cluster. This is standard across all models.

The HOLD function can be activated when:

- The vehicle is stationary
- The selector lever is not in the “P” position
- The engine is running
- Active Distance Assist DISTRONIC is not activated
- The electric parking brake is not applied or it is in the process of being applied
- There is no shutoff in the standstill control
- The vehicle is not sliding

The HOLD function is deactivated automatically if:

- The accelerator pedal is operated (except in the “N” position)
- The selector lever is set to position “P”
- The brake pedal is depressed again with a certain pressure until the “HOLD” status disappears in the instrument cluster
- Active Distance Assist DISTRONIC is activated
- The brake pedal is depressed and the vehicle is sliding

C6L	Multifunction Steering Wheel	Compared to Sprinter 906		
		Carry Over	Advanced	New

The multifunctional steering wheel allows for the driver to operate the on-board computer, vehicle functions, and multimedia systems without taking their hands off the steering wheel. This is done via touch-control and push buttons.

Touch-control buttons are small touch pads which – depending on equipment installed- are split amongst the left and right side of the steering wheel.

The upper left touch pad is used to control the multifunctional display of the instrument cluster, and the lower left controls the assistance systems. The top right touch pad operates the menu of the multimedia system, and the lower right controls the voice control, list of favorites, volume and telephone.

The multifunctional steering wheel is a

technical requirement for the following equipment:

- Code CL3, Leather steering wheel
- Code E3M, MBUX Multimedia system with 7-inch Touchscreen
- Code E4M, MBUX Multimedia system with 10.25-inch Touchscreen
- Code ET4, Active Distance Assist DISTRONIC
- Code JB4, Active Lane Keeping Assist
- Code JK5, Instrument Cluster with Color Display
- Code MS1, Cruise Control

C72	Bumpers Front/Rear Primed	Compared to Sprinter 906		
		Carry Over	Advanced	New

The entire bumper is painted pure white (MB 9678). This coating makes it possible to apply a topcoat in any desired color.

Benefits:

Allows subsequent painting to match a desired color scheme. The bumpers can be painted in a different shade.

Note: Not available with step bumper W73. Side moldings can also be ordered primed (sales code CM9).

Note: Parking package with 360° camera (JB6) or Parking package with rear view camera (JB7) parking sensors are also installed in the color pure white (MB9678), which cannot be painted. Please refer to Mercedes-Benz Body and Equipment Guidelines available on www.upfitterportal.com for more information.

CB1	Suspension for Comfort and Load Protection	Compared to Sprinter 906		
		Carry Over	Advanced	New

This includes shock absorbers tuned specifically for passenger transport as well as additional springs and rubber bearings compared to the base suspension. It additionally has an application of double-leaf parabolic springs with progressive spring characteristic which increase the driving comfort in unloaded vehicles. The spring is designed to be “soft” under low applied force, and becomes “firmer” when the vehicle is loaded, ensuring suitably firm

suspension properties.

Note: Depending on the model this code can be combined with code CB7, Stabilization Stage I.

CB7	Stabilization Level I	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code CB7 provides enhanced roll stabilization, particularly when carrying heavier loads. Compared to the base suspension, a stiffer spring is added on to the front axle and a ride height increase of 0.5”/12.5mm is seen. A torsion bar is also added to the rear axle. In addition, shock absorbers that have adapted characteristic are mounted.

For a better understanding of the various suspension options and features offered on the Sprinter, please reference the ‘Suspension Matrix’ in the MY22 Dealer Ordering Guide.

CB8	Stabilization Level II	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code CB8 provides enhanced roll stabilization and body damping compared to the CB7 (stabilization stage I). Torsion bars in this package come with larger diameters that are mounted to the front and rear axle. In addition, the shock absorbers come with adapted characteristic (compression and rebound) which are mounted on front and rear axle. The leaf springs have an increased rigidity which are mounted on the rear axle.

For a better understanding of the various suspension options and features offered on the Sprinter, please reference the ‘Suspension Matrix’ in the MY22 Dealer Ordering Guide.

CB4	Stabilization Level III	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code CB4 provides enhanced roll stabilization and body damping compared to the CB8 (stabilization stage II). Front axle torsion bar has a larger diameter (1.02” compared to 0.9” with CB8). The overall vehicle stiffness increase by 22% compared to CB8. In addition, the shock absorbers come with adapted characteristic (compression and rebound) which are mounted on front and rear axle. It also comes with additional bump stops in both front and rear axles.

For a better understanding of the various suspension options and features offered on the Sprinter, please reference the 'Suspension Matrix' in the MY22 Dealer Ordering Guide.

CE8	Raised Rear Body Mounts	Compared to Sprinter 906		
		Carry Over	Advanced	New

The vehicle is raised by 1.38” (35 mm), where spacers are fitted on the driver and passenger side between the rear springs (center) and the axle spring saddle. Balances the vehicle when a particularly heavy rear upfit is installed. The length of the shock absorbers is adapted accordingly so that the vehicle has the same spring travel as the standard suspension

Benefits:

- More space between frame and road
- Improved departure angle
- Provides more space under the frame for fitting special attachments and improve vehicle rear ramp angle

CL1	Adjustable Steering Wheel (Angle)	Compared to Sprinter 906		
		Carry Over	Advanced	New

The steering wheel is manually adjustable for tilt and height. To provide a large adjustment range, the wheel can be tilted at a vertical angle between 28 and 32 degrees and adjustable axially by 2.36” (60 mm) and 1.96” (50 mm) in height. The adjustment is performed by a lever on the steering column.

Benefits:

- An ergonomic seating position
- More comfortable seating posture

CL3	Leather Steering Wheel	Compared to Sprinter 906		
		Carry Over	Advanced	New

The leather steering wheel, comes with a 3-spoke design and is lined with 'nappa' leather and a perforated grip area. The standard matt black steering wheel cover is replaced by a silver chrome version.

CM0	Painted Metallic Front & Rear Bumper	Compared to Sprinter 906		
		Carry Over	Advanced	New

Paint colors offered with the code CM0 are:

- MB 7755 Tenorit grey metallic
- MB 9197 Obsidian black metallic
- MB 9775 Iridium silver

In addition, the front and rear bumpers are equipped with one of the following:

- Code JA7, Blind Spot Assist
- Code JB6, Parking Package with 360° Camera
- Code JB7, Parking Package with Reversing Camera

CM0 is not available on Sprinter Cab Chassis (3500XD/4500).

CN2, 'Radiator Grille Frame in Vehicle Color', is automatically added when code CM0 is chosen.

Note: W73, Rear Door Step, will not be painted with the code CM0.

CM2	Bumpers/Detachable Body Parts Painted Body Color	Compared to Sprinter 906		
		Carry Over	Advanced	New

The front bumper and the door side rub panels can be painted in one of the following vehicle colors:

- MB 7755 Tenorite grey metallic
- MB 9147 Arctic white
- MB 9197 Obsidian black metallic
- MB 9775 Iridium silver

CM9	Primed Side Moldings	Compared to Sprinter 906		
		Carry Over	Advanced	New

The side plastic molding panels are primed in a white base coat, allowing for painting with aftermarket paint.

Benefits:

Allows subsequent painting in a desired custom color scheme e.g. fleet purposes.

CN2	Radiator Grille Frame in Vehicle Color	Compared to Sprinter 906		
		Carry Over	Advanced	New

The radiator grille frame is ordered in vehicle color. CN2 is required when ordering one of the following equipment:

- Code C72, Bumpers and corner bumpers, paintable
- Code CM0, Painted bumper
- Code FK3, Chrome-Plated radiator grille

This increases the appeal of the van allowing for a sleeker and upscale look.

CT1	Rear Spring Vibration Absorbers	Compared to Sprinter 906		
		Carry Over	Advanced	New

Installation of two vibration dampers each on the left and right rear spring. Rubber absorbers providing optimal vibration damping and reducing noise levels in the vehicle

D03	High Roof	Compared to Sprinter 906		
		Carry Over	Advanced	New

Standard roof

High roof

The high roof includes high sidewalls and higher rear doors, giving an interior height in the load/passenger compartment of approximately 79.5" (2020 mm) (144" wheelbase approx. 79.1" (2010 mm)). Compared to the standard roof, this is approximately 11.5" (292) mm higher. This provides increased load space and room for stand up. The door apertures are higher on both rear and sliding compartment doors. The maximum load capacity is 330 lbs (150 kg) evenly distributed over the whole area of the high roof, compared to 660 lbs (300 kg) on the standard roof.

The High roof must be ordered when ordering one of the following equipment:

- Code FF4, Shelf above roof trim
- Code HK4, High-performance roof-mounted air conditioning system
- Code VA5, Full paneling, hinged rear doors
- Code V4A, Full paneling, right-hand load comp. sliding door

Benefits:

- Increased load space

- Taller door apertures
- Room to stand upright in the load compartment

D13	Mounting Rails for Roof Rack	Compared to Sprinter 906		
		Carry Over	Advanced	New

Two C-channel rails made of aluminium are permanently mounted in the lengthwise grooves on the vehicle roof. Maximum roof load (including basic carrier bars) 110 lbs. (50 kg) per crossbar. Maximum roof load for the standard roof is 660 lbs (300 kg) (six cross-bars) and 330 lbs (150 kg) for the high roof (code D03) (three cross bars).

Benefits:

Allows roof carriers to be fitted. The roof rails allow roof racks, roof boxes and other accessories to be fitted.

D17	Interior Roof-Rack	Compared to Sprinter 906		
		Carry Over	Advanced	New

The roof rack is attached to the vehicle roof on the inside and serves to secure loaded goods. The system consists of the following components:

- Two rails permanently fixed to the vehicle roof, one on the left and one to the right.
- Two carrier rails are mounted perpendicular to the roof rails and can be moved back and forth along the length of the fixed rails.
- One pair of glides per carrier rail, and a belt for fastening of loaded goods.
- Two head lashings for additional load securing measures.

The inside roof rack is constructed so that the carrier rails can be moved to any position along the fixed rails which reach almost across the entire length of the load compartment. That way, the fastening system can be adapted to the individual length of the loaded goods. For repositioning, the carrier rails can be quickly released and fastened again by loosening and tightening of the clamp nuts. The two gliders can be individually repositioned along the carrier rails allowing goods with different widths and diameters to be secured.

For repositioning of the gliders, the ring must be pulled and released again once the glider is in the desired position. The length of the belts attached to the gliders can be adjusted. Fixing the gliders in the required position and strapping the loaded goods down, will safely retain them in position. The head lashings further help to secure the load in longitudinal direction, e.g. when braking or accelerating. They are hooked into the glider rings with two hooks each.

Note:

- The interior roof rack may carry a load of no more than 110 lbs (50 kg)
- High point loads on the belts and gliders may result in the belt tearing and the gliders breaking off the carrier rails. The load must be distributed evenly. The overall center of gravity is positioned between the fixed roof rails and the carrier rails as centrally as possible.
- When loading or unloading, the area directly below the loaded goods must be clear of persons in order to prevent injury.

D22	Fixed Sunroof (Rear Roof Section)	Compared to Sprinter 906		
		Carry Over	Advanced	New

The 144" WB vehicles are with two fixed sunroofs that are installed in the front and rear sections of the load compartment. The dimensions of each sunroof are about 32.68" x 15.75" (830 x 400 mm). The 170" WB vehicles and 170" WB Ext. vehicles are fitted with the two sunroofs mentioned above, and two additional fixed sunroofs in the rear section of the roof (dimension approx. 6.69" x 20.47" (170 x 520 mm))

Benefits:

- Load compartment experiences increased light, for easier working, etc.
- Greater amount of daylight entering the load compartment provides better working conditions, e.g., in mobile workshops and parcel delivery vehicles.

D50	Cargo Partition	Compared to Sprinter 906		
		Carry Over	Advanced	New

The full width sheet metal (steel) partition D50 located on the B-pillar is designed as one-piece for standard height roofs and two-pieces for high roof versions. These two options now have a 0.59" (15 mm) deeper contouring at backrest height. This allows for the front seats to be better adjusted to the driver and co-driver's comfort and provides a solid barrier for cargo, noise and dirt.

Benefits:

- Serves to secure load, in conjunction with floor mounted lashing D-rings
- Meets the requirements of ISO 27956 standard for the simultaneous transport of passengers and cargo
- In cold temperatures, the driver's cabin can be heated quickly.

Note: Before driving, always make sure to secure your cargo using the tie down system standard in all Sprints.

D51	Cargo Partition with 1 Window	Compared to Sprinter 906		
		Carry Over	Advanced	New

The full width sheet metal partition D51 with one plastic window located on the B-pillar is designed as one-piece for standard height roofs and two-pieces for high roof versions. These options now have a 0.59" (15 mm) deeper contouring at backrest height. This allows the front seats to be better adjusted to the driver and co-driver's comfort. The window dimension is 51.2" x 13.4" (1300 mm x 340 mm) and is glued to the partition wall.

Benefits:

- Serves to secure load, in conjunction with floor mounted lashing D-rings
- Meets the requirements of ISO 27956 standard for the simultaneous transport of passengers and cargo
- In cold temperatures, the driver's cabin can be heated quickly.
- Provides a visual of the cargo area
- Provides view of rear traffic if windows are fitted in the rear doors (W61, W78)

Note: Before driving, always make sure to secure your cargo using the tie down system standard in all Sprinters.

D64	Bulkhead with sliding door	Compared to Sprinter 906		
		Carry Over	Advanced	New

The partition with sliding door is situated in the B-pillar area and fitted with a door lock and locking cylinder. From the driver's side, the sliding door can be opened by four separate keys and from the load compartment side, by a lever on the door lock. The open sliding door is held in place at the end by a retainer. When the sliding door is closed, it is not possible to see the cargo area. The aluminum sliding door is 22.72" (577 mm) x 69.88" (1775 mm) x 0.67" (17 mm) (wide x high x deep). A grab handle (code T77) is fitted on the right-hand side, in the entrance area of the sliding load-compartment door.

A passenger jump seat with a head restraint mounted to the partition (code S20) is also included with this.

Benefits:

- Serves to secure load, in conjunction with floor mounted lashing D-rings
- Meets the requirements of ISO 27956 standard for the simultaneous transport of passengers and cargo
- In cold temperatures, the driver's cabin can be heated quickly.

D93	Omission Bulkhead	Compared to Sprinter 906		
		Carry Over	Advanced	New

No partition is installed on cargo vans. B-pillar is wrapped but the retrofit of a bulkhead is still possible.

Benefits:

- Unimpeded access to load compartment
- Allows special bodies and attachments to be fitted

Provides unimpeded access to the load compartment and allows extra-long objects such as carpet rolls to be placed right through to the passenger's seat base. Also makes it easier for body manufacturers to fit special bodies and attachments.

Note: When retrofitting, modifying or attaching any type of partition, ensure that compliance to ISO 27956 is met, specifically when transporting goods/cargo.

E07	Hill Start Assist	Compared to Sprinter 906		
		Carry Over	Advanced	New

After the service brake has been released, the applied brake pressure continues to be provided by Start-Off Assist (AAS) for approximately 0.8 seconds. AAS automatically activates on gradients of approximately 4% or more, when a gear is selected (forward or reverse). If the direction of travel is downhill, AAS is not activated. AAS is also not activated if the parking brake is engaged.

Benefits:

- Easier hill starts
- Temporarily prevents the vehicle from rolling away

This is standard on all Sprinter vehicles.

E1B	Tray for Smartphones incl. Wireless Charging	Compared to Sprinter 906		
		Carry Over	Advanced	New

The smartphone tray is located in the center of the cockpit and it enables wireless charging of mobile phones of up to 6.7" (170 mm) in size. Wireless charging is possible for all mobile devices that support Qi Standard V1.2.

Near Field Communication (NFC)

The Near Field Communication is an international transmission standard for the wireless exchange of data via radio technology over very short distances of a few centimeters. Mobile phones that are placed on the tray and that support the NFC standard can be connected easily and quickly the multimedia system via Bluetooth®.

USB-Port Overview

*Smartphone Integration (Apple Car Play/Android Auto)

E1E	Navigation	Compared to Sprinter 906		
		Carry Over	Advanced	New

With this, the MBUX multimedia system with 7" touch display (code E3M) becomes a full-fledged navigation system including free map data updates for 3 years. It can be operated either via touch screen, the buttons on the control unit below the touch screen, or via touch-control buttons to the right of the multi-functional steering wheel. Navigation can be displayed both on the display of the multimedia systems and the instrument cluster. This is not available on the 10" MBUX multimedia system

(code E4M).

Additional functions:

- Mercedes me connect
- LINGUATRONIC voice control
- WLAN-Hotspot
- Multimedia interface with an additional USB-C interface
- Improved hands-free function
- Center-fill loudspeaker for an improved sound quality and voice output
- Digital operator's manual
- Dual phones use

USB-Port Overview

Radio/Head Unit	Code	USB-C port amount	Location	Function		
				Charging	Data Transfer	Intelligent*

*Smartphone Integration (Apple Car Play/Android Auto)

E10	Standard Radio	Compared to Sprinter 906		
		Carry Over	Advanced	New

The 1-DIN radio with FM/AM reception comes with an LCD display and an integrated USB-C port. The radio can be operated exclusively via the device itself and not via the optional multifunctional steering wheel.

Radio stations can be individually saved while the dual tuner ensures the best possible reception via the antenna on the vehicle.

The standard-Bluetooth® installation allows the customer to use the hands-free telephone system as well as accessing the list of contacts saved on the mobile phone. The quality of the telephone connection is dependent on the mobile phone's reception, as phone calls via Bluetooth® do not require the vehicle antenna.

When calling or receiving a call the radio volume is automatically reduced (mute function). The communication occurs via loud speakers and a microphone integrated in the vehicle. In addition, it is possible to stream audio files from mobile audio devices to the radio via Bluetooth®, given that the device supports the usual formats. When playing music via Bluetooth®, vehicle speakers are used allowing the user to toggle through songs via a pre-selected playlist. It is not possible to browse using the 1-DIN radio through folders on the mobile device.

E1S	Sirius XM, Satellite Radio	Compared to Sprinter 906		
		Carry Over	Advanced	New

The head unit enables the reception of stations from provider Sirius XM® and offers more than 160 channels of music, talk, sports, news and other programs. The Satellite Digital Audio Radio Service (SDARS) information is shown on the Audio display. The Sirius satellite radio signal is broadcast 3 times to achieve a diversity of channels (using two satellites and one terrestrial transmitter). All three channels are received by the SDARS antenna placed on the roof next to the B-pillar (on cargo vans) and on the roof in front of

the B-pillar on cab chassis.

Sirius XM® radio is already activated from factory and includes a free trial period. For more information, please refer to Sirius XM®.

E1R	Additional Fuses (40/80/150/100 Amps)	Compared to Sprinter 906		
		Carry Over	Advanced	New

The main fuse box now contains 4 additional fuses (40/80/150/100 Amps) that are not utilized by the Sprinter and are dedicated fuses for electrical consumers on upfitted vehicles. Please look at the Sprinter operator's manual for more information on fuse locations.

Main fuse locations	Current (A)
F8	100
F9	150
F10	80
F12	40

E1U	USB-C Socket, 5V	Compared to Sprinter 906		
		Carry Over	Advanced	New

The 5-Volt USB-C power socket is located centrally in the lower part of the cockpit, below the center cup holder and next to the standard 12-Volt socket. Allows for these options to be within easy reach of driver and passenger.

USB-Port Overview

Radio/Head Unit	Code	USB-C port amount	Location	Function		
				Charging	Data Transfer	Intelligent*

*Smartphone Integration (Apple Car Play/Android Auto)

E1X	MBUX multimedia 6-hour runtime	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code E1X extends, depending on the battery charge level, the MBUX multimedia radio operating time up to 6 hours (without automatically shutting down). Full charging of the starter battery is recommended for an optimum radio operating time. For the use of the MBUX multimedia systems while stationary, an external power supply with a power feed to the starter battery of at least 140 W is required.

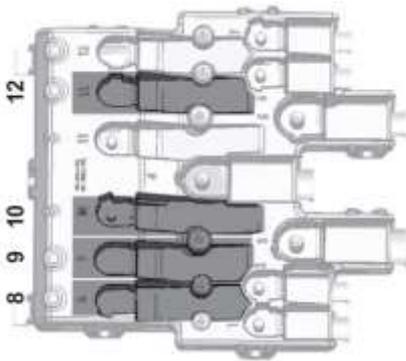

This is automatically configured in with code X2R - Requirement for conversion to RV (where applicable).

E1Y	Additional Fuses (40/80/80/100 Amps)	Compared to Sprinter 906		
		Carry Over	Advanced	New

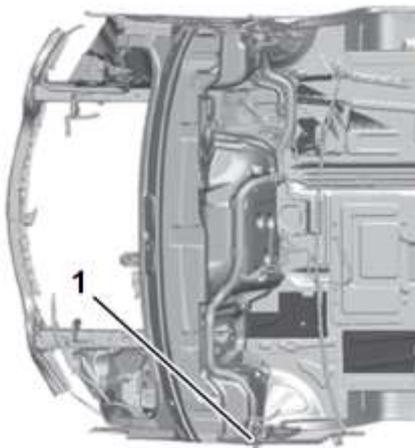

The main fuse box now contains 4 additional fuses (40/80/80/100 Amps) that are not utilized by the Sprinter and are dedicated fuses for electrical consumers on upfitted vehicles. Please look at the Sprinter operator's manual for more information on fuse locations.

Main fuse locations	Current (A)
F8	100
F9	80
F10	80
F12	40

E2A	Access Point for BB Special Signals in Cockpit	Compared to Sprinter 906		
		Carry Over	Advanced	New

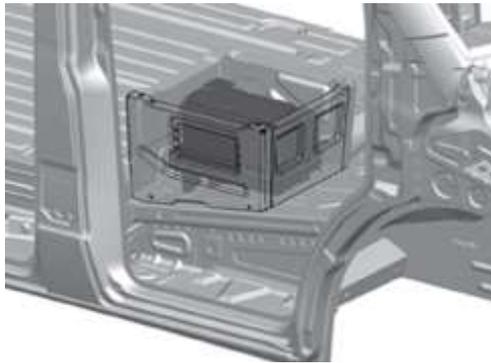

This pre-installation is a standardized interface located in the driver's side A-pillar to easily connect predefined electrical vehicle functions to upfitter devices. It includes 12 upfitter special signals:

- Additional terminal 15 (ignition on, 5 A)
- Terminal 30T (battery voltage behind the switch for the deep discharge protection, 7.5 A)
- Terminal 31 (ground, battery, 25 A)
- Terminal 58D (lighting instrument cluster, 1 A)
- Turn indicator left (21 W, 2 A)
- Turn indicator right (21 W, 2 A)
- Reversing lamps (2 x 21 W, 2 x 2 A)
- 5 additional freely assignable signals between the instrument panel and the seat base (7.5 A)

Note: A Parameterizable Special Module (PSM), Code ED5, is not necessarily required. If a PSM is not included, the speed and hand brake signal, terminal 30, and D+ cannot be used.

E2I	Additional battery for retrofit consumers, driver seat base	Compared to Sprinter 906		
		Carry Over	Advanced	New

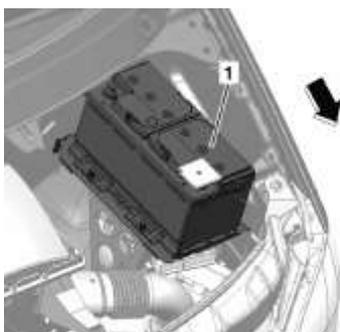

When ordering this, an absorbed glass mat (AGM) battery 12 V/92 Ah 850 A is installed into the passenger' seat frame. If an installation in the passenger's seat frame is not possible due to upfit restrictions, an additional 12 V / 70 Ah 720 A, AGM battery can be ordered into the engine compartment on the left hand side in driving direction, via code E2M. The battery is ideal for powering additional electrical consumers without putting a load on the starter battery.

From factory, the following equipment is connected directly to the additional battery:

- Code E46, Power socket in cab
- Code EE3, 115 V Socket
- Code ES2, 12 V Plug socket in trunk / load compartment
- Code ES5, Charging package, dashboard
- Code V85, Smoker package
- Code E1U, USB-C Socket, 5 V

A cut-off relay (E36) must be ordered with an additional battery. The relays is positioned in the charging circuit of the additional battery. It separates the load of the starter battery from the additional battery, in order to prevent the started battery from discharging. When the engine is running, the relay allows both batteries to be charged or discharged simultaneously.

E2M	Additional battery for retrofit consumers, engine Compartment	Compared to Sprinter 906		
		Carry Over	Advanced	New

If an installation in the passenger's seat frame is not possible due to upfit restrictions, an additional 12 V / 70 Ah 720 A, AGM battery can be ordered into the engine compartment on the left hand side in driving direction, via code E2M. The battery is ideal for powering additional electrical consumers without putting a load on the starter battery. A cut-off relay (E36) must be ordered with an additional battery.

E30	Starter battery disconnect	Compared to Sprinter 906		
		Carry Over	Advanced	New

The battery quick-disconnect unplugs the battery ground connection and switches off all electrical consumers. It is located in the driver's foot well, to the right of the accelerator pedal. To disconnect, the connector has to be removed from the ground post. See owner's manual. It must be ensured that the

battery master switch is only disconnected when the vehicle key in ignition is in position 0, otherwise there is a risk of damaging other components in the electrical system. The battery quick-disconnect is standard on all Sprinters.

Benefits:

- Prevents uncontrolled battery discharge
- Work on the electrical system can be carried out more quickly

The battery quick-disconnect prevents uncontrolled discharging of the battery due to standby current consumption. It is recommended that vehicles with extended down time be disconnected (three weeks or longer). The battery quick-disconnect also allows work on the electrical system to be carried out more quickly, since it is not necessary to disconnect the battery pole.

E36	Cutoff relay for additional battery	Compared to Sprinter 906		
		Carry Over	Advanced	New

The relay is installed on the charge line to the auxiliary battery. It separates the starter battery consumers from the auxiliary battery consumers. When the engine is running, the relay allows both batteries to be charged (by the alternator) or discharged simultaneously.

Benefits:

Starter battery cannot be discharged by auxiliary consumers. The cutout relay prevents the starter battery from being drained by consumers connected to the auxiliary battery. It also prevents the auxiliary battery from being drained by the standard consumers such as the starter or fan.

E3J	Pre-Installation for switch panel	Compared to Sprinter 906		
		Carry Over	Advanced	New

This pre-installation includes two additional switch panels below the steering wheel with a total of eight possible switches, where two switches are located to the left and six switches are located to the right. The covers can be exchanged in the future to functioning switches for retrofitting purposes.

E3M	MBUX Multimedia System with 7" Touchscreen	Compared to Sprinter 906		
		Carry Over	Advanced	New

- High-resolution 7"/17.8 cm touch screen (960 x 540 pixel)
- AM/FM Radio with dual tuner
- Bluetooth® connectivity with audio streaming
- Hands-free functionality
- Smartphone integration via Android Auto or Apple CarPlay
- Multimedia interface with USB-C port
- 2-Way loudspeakers front, 4 x 25 W power output, sound settings, separate volume settings for audio and telephone

If E3M is ordered, the standard rear view camera (FR3) is replaced with FR8, which then is displayed in the touchscreen. For cab chassis with E3M the pre-installation (FR7) for a digital rear view camera is recommended.

USB-Port Overview

Radio/Head Unit	Code	USB-C port amount	Location	Function		
				Charging	Data Transfer	Intelligent*
Standard USB-socket	E1U	1	Lower Center Console	X		
Standard Radio	E10	1	Integrated in Standard Radio	X	X	
7" Screen	E3M	1	Center Dash Board	X	X	X
7" Screen with Wireless Charging	E3M + E1B	1	Center Dash Board	X	X	X
		1	Center Dash Board	X	X

Charging Package	ES5	1	Center Dash Board	X		
		1	also includes a 12V socket in center dash board			
Rear Ports PV	V21	4-5	Rear Paneling	X		

*Smartphone Integration (Apple Car Play/Android Auto)

E40	Trailer Hitch Prep. Wiring	Compared to Sprinter 906		
		Carry Over	Advanced	New

Wiring for trailer hitch that runs along the inside left frame. E40 includes a seven-pin connector and provides power for trailer lightning systems (tail lights, brake lights, direction indicators, rear fog lights and reversing light) and allows electrical operation. The trailer wiring is bundled up and temporarily attached to the frame during transport. This allows for installation of an authorized accessory trailer hitch by the body builder.

Benefits:

Connects the trailer lights to the Sprinter. It is installed with the corresponding wire harness and trailer control unit, but no trailer hitch is installed.

E46	12 V Power Outlet, Driver Seat Base	Compared to Sprinter 906		
		Carry Over	Advanced	New

A 12 V / 15 A socket with a maximum power consumption of 180 W is installed on inner side of the driver ´s seat frame. The socket is supplied with power by the starter battery, except if code E2I/E2M is ordered, and then it is supplied by the auxiliary battery. In this case, power can be drawn regardless of ignition status.

Benefits:

Can be used to power additional electrical consumers. The socket can be used to power electrical consumers such as a fan, TV or cooler

E4A	Antenna Interface for Radio, Navi., Mobile Phone	Compared to Sprinter 906		
		Carry Over	Advanced	New

Upfitters can install their own antenna and use the antenna interface to connect the telematics. This enables exchange of analogue and digital radio signals as well as GNSS and GSM signals and therefore the use of Mercedes-Benz radios or multimedia systems in the vehicle. The antenna interface is located in the driver’s seat box and its cable reaches to the DIN-slot in the center console.

Note: this will remove the standard antenna (ED3) from the Sprinter vehicle.

E4M	MBUX Multimedia System with 10.25” Touchscreen	Compared to Sprinter 906		
		Carry Over	Advanced	New

Contains the following in addition to the 7” system (Code E3M):

- High-resolution 10.25”/26 cm touch screen (1.920 x 720 pixel)
- Hard disk navigation incl. free map data updates for 3 years
- Mercedes me connect
- LINGUATRONIC voice control
- WLAN-Hotspot
- Multimedia interface with two USB-C ports
- Air vents lined in matt silver
- Improved hands-free function
- Center fill loudspeaker for an improved sound quality and voice output
- Digital operator’s manual
- High gloss optic

E4M has a standard rear view camera (FR8) and replaces the standard rear view camera (FR3). For cab chassis with E4M the pre-installation (FR7) for a digital rear view camera is recommended.

Internet in the Car

The Wi-Fi Hotspot enables wireless use of the internet with mobile devices inside the vehicle. The head unit acts as a Wireless Access-Point (WAP) and exchanges Wi-Fi data with mobile devices via the antenna and routes the signals to the internet. To connect the mobile device, the user must search for networks (Wireless Local Area Network) on the mobile device and select the head unit network. Several devices can be connected simultaneously.

Conditions for using Wi-Fi:

- The Wi-Fi function on the head unit is active
- The head unit is connected to the internet
- Wi-Fi capable mobile device is available
- A contract must be made with T-Mobile in order to access data services, and this contract can be made via T-Mobile or infotainment system

Internet Access – General Information

The head unit controls the internet connection. The communication module for digital services is used as a modem. In the interest of data security, SSL encryption (Secure Socket Layer) is used.

The internet can be used in the vehicle in the following ways:

- Use of Mercedes me connect services such as weather forecast, special destinations, and searching for and loading of trip routes
- Unrestricted surfing (vehicle is stationary)

LINGUATRONIC voice control

The voice control system recognizes coherent commands that can be spoken by any person without the need for teach-in. If the spoken command is not clearly identified, a query is made by the voice control system.

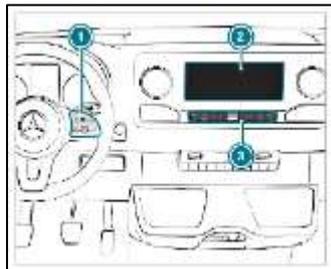

Voice control allows for access to and operation of a numerous functions of the driver information system such as:

- Navigation
- Radio and other media sources
- Telephone
- Vehicle menu

When in standby mode, LINGUATRONIC can be activated via the corresponding button on the multifunctional steering wheel or by using a code word (“Hey Mercedes”). Voice input takes place via the driver hands-free system microphone.

Telephone

Up to 15 mobile phones can be authorized/registered on the multimedia system. Up to two phones can be used at the same time in combination with the Navigation or the Multimedia system with a 10.25” touch screen. However, the second phone can only process incoming calls, and text messages. The user is able to receive, send and manage text messages. The system can read out text messages.

The MBUX system can be operated via:

- Touch control on the multifunctional steering wheel
- Touch control on the multimedia system display
- Buttons on the control panel below the display
- LINGUATRONIC voice control

USB-Port Overview

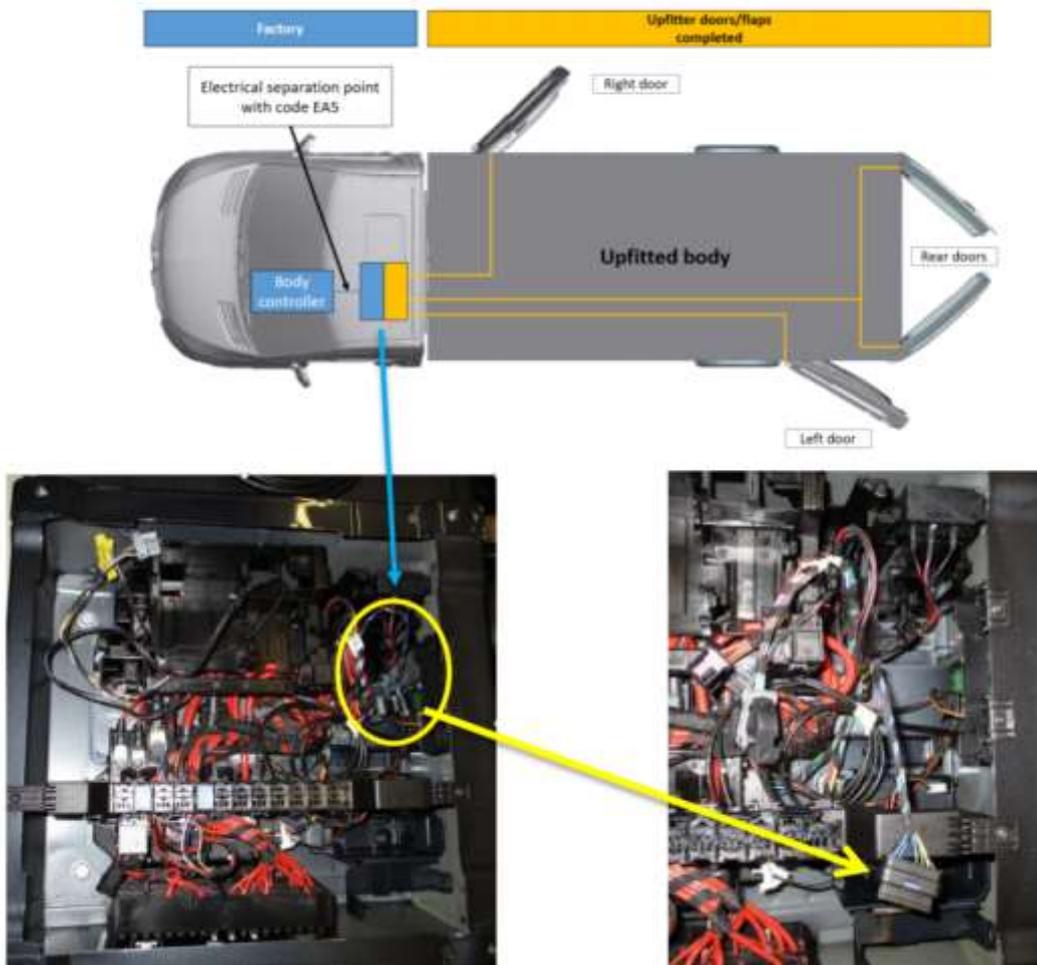

Radio/Head Unit	Code	USB-C port amount	Location	Function

Rear Ports PV	V21	4-5	Rear Paneling	X		

*Smartphone Integration (Apple Car Play/Android Auto)

E5M	Extension of PSM Standard Contact	Compared to Sprinter 906		
		Carry Over	Advanced	New

This code involves connection of a defined cable set to the PSM including a 21-pole socket for outlets and an 18-pole socket for inlets. This facilitates connection of retrofitted components. The corresponding plugs with part number A0285453628 (PSM-outlet) and A0265459428 (PSM-inlet) can be ordered through your nearest authorized Mercedes-Benz dealer.

EA5	Pre-wiring central locking (upfitter doors rear)	Compared to Sprinter 906		
		Carry Over	Advanced	New

Pre-installation kit includes a wiring harness that gives cab chassis customers a chance to add additional aftermarket doors that use the same Mercedes-Benz key fob signal for unlocking and locking the doors and will also indicate door lock status in the instrument cluster.

Please refer to the technical bulletin available on www.upfitterportal.com titled “Sprinter MY2019+ Preinstallation for Central Locking on Body” for more information.

ED1	AGM Battery 12V 70AH	Compared to Sprinter 906		
		Carry Over	Advanced	New

AGM technology (Absorbent Glass Mat) and its fixed electrolytes allow better utilization of the cell volume for higher cold-starting power and extreme vibration resistance. The higher-capacity AGM battery provides a reliable power supply for numerous optional items of electrical equipment with higher power consumption and is resistant to cycling, safe against deep discharge and maintenance-free. The standard battery for all cargo vans and cab chassis comes via code ED1 as 12V 70 Ah 720 A variant and can be upgraded via code ED4 to the 12 V 92 Ah 850 A variant.

ED3	Antenna for Mobile Phone	Compared to Sprinter 906		
		Carry Over	Advanced	New

The antenna receives radio, telephone (up to 4G mobile phone signals), navigation signals and allows navigation and telematics systems to be fitted. If necessary, the aerial rod can be unscrewed when going through car washes. The number of available signals depends on the equipment installed in the vehicle – without telematics equipment or in conjunction with radio preparation (ERO) all 3 signals are available. In conjunction with MB audio system (E10) the radio signal is already assigned. The aerial is grounded via the metal roof, a ground connection is not possible if the vehicle is fitted out with a plastic roof

ED4	AGM Battery 12 V 92 Ah 850A	Compared to Sprinter 906		
		Carry Over	Advanced	New

A heavy-duty 12 V/92 Ah AGM (Absorbent Glass Mat) starter battery is fitted instead of the standard starter battery. The AGM battery is smaller and lighter than common batteries, because the energy density is increased.

The heavy-duty Battery 12 V 92 Ah 850 A is required when ordering one of the following equipment:

- Code F49, Windscreen, heated
- Code H12, Auxiliary hot-water heater
- Code H88, Adaption fittings for aux. heat exchanger

Benefits:

- Resistant to exhaustive discharge
- Deep-cycle resistant
- Maintenance-free
- Increase in power enables electrical system to cope with higher loads
- More reliable starting in winter

The AGM battery is designed for heavier-duty requirements resulting from frequent starting in short-distance operation (deep-cycle resistant) or from supplying a large number of high-consumption electrical special equipment items. It is also recommended for operation in extreme climates, e.g., when the high-performance air conditioning in the passenger compartment is used.

ED5	Parametric Special Module (PSM)	Compared to Sprinter 906		
		Carry Over	Advanced	New

The parameterizable special module (PSM) gives upfitters access to individual types of CAN bus data. The PSM is able to read messages of the various bus data and then, for example, translate them into switching signals at the outputs provided or PWM signals or forward those to a specific body manufacturer upfitter CAN. The installed electronics then have access to the necessary signals.

Vehicle information can be accessed via the 20 outputs or the ABH CAN (bodybuilder CAN) interface of the PSM. For more information, please refer to the PSM bulletin available on www.upfitterportal.com.

Note: PSM is required with the following equipment:

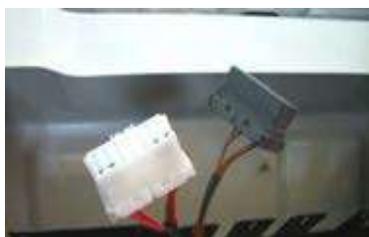

- Code E5M, Extension of PSM Standard Contact
- Code T57, Electr. step, load compartment sliding door, right

Parametrization of the control unit PSM is carried out using the XENTRY Diagnostic tool. The upfitter is responsible for the PSM programming that is installed on the vehicle.

Benefits:

The Sprinter is networked with several bus systems and the PSM was developed to give upfitters access to individual types of CAN bus data. The PSM is the gateway to the CAN bus and can be used to read vehicle information and control vehicle functions (e.g., the central locking).

ED8	Pre-Installation PSM	Compared to Sprinter 906		
		Carry Over	Advanced	New

The pre-installation includes the electric wiring up to the driver's seat base frame.

Benefits:

Allows easy retrofitting of the parametric special module. Access to the vehicle electronics system is now only possible/permissible via one defined interface. This improves protection of the vehicle's basic functional integrity.

EE3	115 V Socket	Compared to Sprinter 906		
		Carry Over	Advanced	New

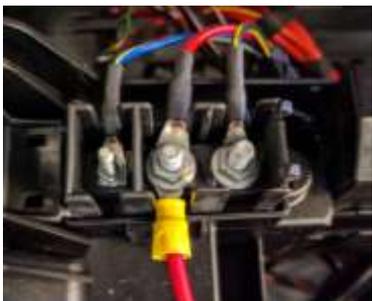

The 115-V socket is located in the lower part of the center console and serves to power small electrical devices with an output of up to 150 W, such as mobile phones, cordless electric screwdrivers, laptops, or flashing lights. The system is comprised of a DC/AC-converter with surge protection and a power socket. The socket is only supplied with power if a plug is recognized. For vehicles without additional battery, the power socket is functional via the KEYLESS-START power supply when the ignition is set to position 1. Vehicles with an additional battery have a run-on function that allows for devices to be charged for up to four hours after the engine has been turned off. A light on the socket indicates when it is operating.

EE5	Super-capacitor discharge module	Compared to Sprinter 906		
		Carry Over	Advanced	New

This code is a super capacitor module that is utilized when the main battery switch is disconnected; to power the internal CAN bus system during extended periods of vehicle downtime. It avoids the complete discharge of the main or emergency battery (if equipped) which would cause lasting damage.

Standard across all Sprinter models.

EK 1	Body Builder Connector	Compared to Sprinter 906		
		Carry Over	Advanced	New

The terminal strip is installed inside the driver seat frame, allows easy integration of additional electrical consumers into the existing network, and offers three connectors:

- Terminal (engine running) D+ 12 V / 10 A (120W)
- Terminal 30 12 V / 25 A (300W)
- Terminal 15 12 V / 15 A (180W)

Benefits:

Supplies additional consumers with power options. The blank switch panel below the steering wheel, allows the integration of additional switches for the operation of body/conversion systems installed by upfitters or vehicle operators.

EL9	Audio Systems Speakers, 5 Front, 8 Rear	Compared to Sprinter 906		
		Carry Over	Advanced	New

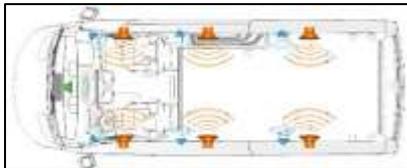

2 tweeters are fitted on the outside. Depending on the configuration, an additional speaker is fitted in the centre of the instrument panel, 4 more speakers are located in the side trim of the passenger or cargo compartment. 6 bass/mid-range speakers are fitted in the driver's and co-driver's door as well as in the left and right side trim in the rear.

Benefits:

- Excellent sound quality due to 13 speakers
- Improved listening pleasure in passenger compartment

Offers excellent sound quality, due to separate tweeters and mid-range woofers, and improved listening pleasure for passengers, wherever they happen to be sitting.

EP7	Basic Electric Fitting for Rear Loudspeakers	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code EP7 adds a pre-wiring for a later installation of rear loudspeakers.

ER0	Pre-Installation for Radio	Compared to Sprinter 906		
		Carry Over	Advanced	New

The radio fittings provide an AM/FM antenna, a 12 V power source and the interface for 2-way loudspeakers in the front. A single DIN slot is provided in the center of the cockpit for retrofitting a radio. The pre-installation for radio does not support CAN technology. Without CAN e.g. the control of the radio via the multi-function steering wheel and display of radio information in the instrument cluster are not supported.

ES0	Jump Start Terminal	Compared to Sprinter 906		
		Carry Over	Advanced	New

A jump-starting connection point is located on the air filter box in the engine compartment and allows easier jump starting or charging of the starter battery. The terminal can be accessed by pushing back the red protective cap for the positive terminal and a brass rod on the inner left fender for ground.

ES2	12 V Power Outlet, Rear Compartment	Compared to Sprinter 906		
		Carry Over	Advanced	New

A 12-volt socket is located in the left-hand D-pillar trim of the passenger/cargo Van. The passenger Van also has a 12-volt socket in the right-hand D-pillar trim. Both sockets have a maximum power rating of 180 watts. Power can be drawn regardless of ignition key position. The sockets are supplied with power by the starter battery, except if code E21/E2M is specified, in which case it is supplied by the auxiliary battery.

Benefits:

Connection point for electrical accessories. The socket can be used to power accessories such as a cool box, vacuum cleaner, electric air pump or other electrical equipment, without the need for long cables.

ES5	Charging Package, Dashboard	Compared to Sprinter 906		
		Carry Over	Advanced	New

The charging package expands the charging facilities in the cockpit to two 5 V USB-C ports and one 12 V power socket. One of the USB ports as well as the 12 V socket are located in the center storage recess of the instrument panel. Another USB port is located in the lower part of the center console. This allows for charging of electric devices such as mobile phone within the driver's and co-driver's reach.

Note: In combination with code E1B, Tray for Smartphones incl. Wireless Charging, the upper USB interface also allows for connecting of mobile devices to the multimedia system.

USB-Port Overview

Radio/Head Unit	Code	USB-C port amount	Location	Function		
				Charging	Data Transfer	Intelligent*
Standard USB-socket	E1U	1	Lower Center Console	X		
Standard Radio	E1O	1	Integrated in Standard Radio	X	X	
7" Screen	E3M	1	Center Dash Board	X	X	X
7" Screen with Wireless Charging	E3M + E1B	1	Center Dash Board	X	X	X
		1	Center Dash Board	X	X

ET4	Active Distance Assist DISTRONIC	Compared to Sprinter 906		
		Carry Over	Advanced	New

target speed.

DISTRONIC regulates the speed and the distance of the vehicle with a short and long range sensor located in the front bumper. The system regulates automatically according to the specification set by driver; it brakes when necessary and accelerates again when possible. In slow moving or stop and go traffic, the DISTRONIC brakes the vehicle automatically (if necessary to a standstill). Once the traffic situation allows moving again, the DISTRONIC accelerates the vehicle automatically up to the set

The vehicle speed can be set in a range of 15 mph (24 km/h) and the vehicle's top speed. If the system recognizes that strong braking is necessary, the DISTRONIC warning lamp in the instrument cluster lights up and an intermittent alarm tone sounds to notify the driver to proceed with increased caution and to possibly brake themselves. If the driver reacts to the acoustic warning and brakes, they will be also assisted by the Brake Assist function. If the driver fails to respond to the acoustic warning, the Brake Assist initiates (in addition to the visual and acoustic warning) partial and then maximum full-stop braking. If the vehicle was brought to a full stop, the assistance system must be reactivated using the control device on the left side of the multifunctional steering wheel.

The vehicle speed and distance can be set on the left panel on the multifunction steering wheel.

Note: If DISTRONIC is switched off and the Brake Assist is not deactivated, the situation in front of the vehicle continues to be monitored and evaluated. In dangerous situations, either warnings are given, as described above, or autonomous braking occurs.

EX9	Free Map Data Updates for 3 Years	Compared to Sprinter 906		
		Carry Over	Advanced	New

This code gives customers access to free map updates for three years after first vehicles registration. Updates are available by Mercedes-Benz service or online via Mercedes Benz PRO.

EW6	Pre-installation for Mercedes me remote services	Compared to Sprinter 906		
		Carry Over	Advanced	New

Vehicle setup:

- Remote view of vehicle status
- Remote door locking and unlocking
- Programming auxiliary heating (H12 required)

Vehicle monitoring:

- Vehicle GPS tracker
- Geo-fencing
- Speed regulating
- Valet parking and curfew timer
- Parked vehicle locator
- Remote vehicle finder

To use these services, please register on the Mercedes me portal and accept the Terms of Use for the Mercedes me services. In addition, the respective vehicle must be paired with the user account. After the initial term expires, the services can be renewed for a fee. Refer to the Mercedes Me Connect section at the end for more information.

EY2	Intelligent navigation	Compared to Sprinter 906		
		Carry Over	Advanced	New

This replaces the previous generation ‘Intelligent Navigation’ (E1G). The communication module forwards the real-time traffic data to the head unit and receives position data from the head unit at regular intervals in the opposite direction. The position data is sent to the service provider. The HERMES control unit therefore contributes to collecting the traffic information from

which the map navigation then benefits. This service need to be activated via Mercedes me and is free of use in the first 36 months.

This is added automatically when ordering code JH3 and one of the following equipment:

- Code E1E, Navigation
- Code E4M, MBUX Multimedia system with 10.25” touch screen

F1K	Coat Hooks in Driver Cabin	Compared to Sprinter 906		
		Carry Over	Advanced	New

The two coat hooks in the cab are available for the cargo van and mounted above the head restraints on the partition wall inside of the driver’s and co-driver’s seats.

F28	Roof and Rear Wall Deletion	Compared to Sprinter 906		
		Carry Over	Advanced	New

Chassis without rear wall and roof, but including seat bases. A cover (code P08) is supplied for transport purposes.

Benefits:

Allows body manufacturers to produce special body designs, e.g., camper bodies, which also include the roof over the cab.

F35	Window in Cab Rear Wall	Compared to Sprinter 906		
		Carry Over	Advanced	New

The Cab Chassis rear wall is fitted with a window of single-layer safety glass, size 52.4”x14.2” (1330 x 360 mm)

Benefits:

- Improved rearward visibility
- Allows visual checking of cargo

The window allows more light into the cab. It provides rearward visibility, for easier reversing. In the case of vehicles with box bodies, it allows the driver to keep an eye on the cargo.

F3W	Omission of Storage	Compared to Sprinter 906		
		Carry Over	Advanced	New

The open storage compartment (FJ4) can be optionally deleted via code F3W.

F43	Laminated Glass Rear	Compared to Sprinter 906		
		Carry Over	Advanced	New

Laminated glass is installed for the side windows behind the driver/passenger and –if applicable- behind the last seat row. It is a legal requirement (FMVSS 226) for vehicles with a gross vehicle weight rating (GVWR) of up to 10,000 lbs. without a partition wall and this is met.

Benefits:

- Reduce the risk of complete ejections of occupants through the side windows during rollovers or side impact collisions.
- Reduce the risk of partial ejections of occupants through the side windows during rollovers or side impact collisions.

The safety effect of laminated glass is based on the high tear strength of the intermediate layer and its great adhesion to the glass. In the case of mechanical overloading, the glass breaks, but the fragments remain attached to the uninjured intermediate layer.

Note: The laminated glass is only available as a black-tinted variant, code W70.

F49	Electrically Heated Windshield	Compared to Sprinter 906		
		Carry Over	Advanced	New

A heated laminated windshield is mounted onto the vehicle. The heating consists of thin, wavy, vertically aligned heating filaments embedded within the laminated glass and is controlled by a rocker switch with an indicator light on the center console. Heating the windshield is only possible while the engine is running. In the event of high outside temperatures, the windscreen heater may not turn on.

It automatically switches itself off after approximately five minutes – or can be switched off manually by pressing the rocker switch again.

Benefits:

Prevents fogging. The heated windshield helps, e.g., to keep the windshield free from fogging, snow or ice in winter.

F50	Cowl platform	Compared to Sprinter 906		
		Carry Over	Advanced	New

The cowl platform, is based on the cab chassis but without a windshield, roof frame, rear wall and doors. This type of vehicle provides upfitters a basis for fitting fully integrated superstructures e.g. campers or special-purpose solutions. The cowl version comes always without a driver and co-driver's airbag. Comfort seats with swivel base for driver and passenger are part of the vehicle configuration.

F61	Interior Rear View Mirror	Compared to Sprinter 906		
		Carry Over	Advanced	New

An interior mirror is attached to the front windshield to provide rearward visibility.

Benefits:

- Manually adjustable for day and night
- Enhances safety

The interior mirror is particularly useful when reversing and when maneuvering at loading ramps. Allows the driver to keep an eye on the cargo compartment/passenger compartment.

F64	Electrically Folding Exterior Mirrors	Compared to Sprinter 906		
		Carry Over	Advanced	New

The electrically foldable mirrors, are only available in conjunction with the adjustable and heated exterior mirrors (F68) for vehicles up to 10,000 lbs. They can be operated using the button located in the control panel on the driver’s door. The side mirrors can be conveniently folded when parking, and driving through a narrow road or car wash facility preventing any potential damage.

The code F64 is required for:

- Code JB6, Parking package with 360° camera
- Code JB7, Parking package with reversing camera

F68	Heated and Electrically Adjustable Exterior Mirrors	Compared to Sprinter 906		
		Carry Over	Advanced	New

The exterior rear view mirrors and the wide-angle mirrors are heated and electrically adjustable. The mirrors can be adjusted to the optimal position for the driver’s visibility. Each mirror can be adjusted with switches located on the driver’s door control panel. These switches allow for right-hand or left-hand exterior mirror adjustments. The heating for the mirror is regulated dependent on the exterior temperature, for temperatures below 59°F the heating is activated, and at 66°F it is deactivated again. This can be activated by another switch located on

the control panel.

Benefits:

- Rapid mirror adjustment following a change of driver
- Helps to prevent mirrors misting up or frosting over
- Allows quick and easy adjustment of the exterior mirrors following a change of driver. Also reduces misting or frosting over of the rear view mirror, and wide-angle mirror in cold or damp weather.

FA1	Lowered Cab Roof	Compared to Sprinter 906		
		Carry Over	Advanced	New

In the case of a cab chassis without a rear wall and roof (code F28), the door portals and remaining roof structure are trimmed. A square tube construction is bolted in, providing both provisional rigidity and an attachment surface. This provisional structural rigidity must be accounted for in dimensional terms when planning and designing alcove based bodies. The auxiliary roof frame allows for mounting of additional roof structures such as alcoves. The maximum dynamic support load is 220 lbs. / 100 kg. The top of the auxiliary roof frame is about 2.36” (60 mm) lower than that of the standard cowl and doors, code F28.

The lowered version is also painted in the body shop following modification. The standard-specification sun visors and grab handles are mounted. The roof paneling can be attached to the established securing points, but must be trimmed individually by the body manufacturer and adapted to the interior equipment. Alternatively, an upfitter can install their own construction if this has a rigidity equivalent to that of the original design.

Benefits:

- Caters to special body designs
- Allows a lower overall vehicle height
- Roof variant specially aligned with the requirements of camper van body manufacturers

This makes it possible to produce an alcove variant more closely aligned with the requirements of camper van manufacturers compared with the standard chassis. Thanks to pre-installation in the body shop, the overall vehicle height can be reduced – particularly for camper vans. A clearly defined attachment level is available to the body manufacturer – complex body shop modifications are not necessary.

FE9	Additional DIN-Slot	Compared to Sprinter 906		
		Carry Over	Advanced	New

When ordering code FE9 a 1-DIN slot is included underneath the dashboard on the co-driver's side. This slot can be used for additional electronic devices. It comes with a cover for delivery and includes a cable set which reaches into the slot and offers the following connections:

- Terminal 15, Ignition
- Terminal 30, Battery plus
- Terminal 58d, Instrument lighting
- Terminal 31, Battery ground

FF0	Coat Hooks	Compared to Sprinter 906		
		Carry Over	Advanced	New

The clothes hook in passenger compartment are within reach of the passengers on the restraint of the benches. Depending on the vehicle configuration:

- 1 coat hook at the back of the driver's seat
- 1 coat hook at the back of the passenger's seat, 2 hooks in conjunction with twin passenger seat (S23)
- 2 hooks at the back of the twin passenger benches in the passenger compartment
- 3 hooks at the back of the 3-seat benches in the passenger compartment

Benefits:

Safe storage of clothing items.

FF3	Cupholder Rear Compartment	Compared to Sprinter 906		
		Carry Over	Advanced	New

Cup holders are mounted between the rear seats on each bench. One cup holder can carry two cups or bottles with a diameter of up to 3.3" (84 mm). The cup holders can be ejected individually by pushing on its flap.

Benefits:

Allows drink containers to be put down safely in the passenger compartment.

FF4	Storage Compartment above Cabin	Compared to Sprinter 906		
		Carry Over	Advanced	New

The storage compartment above the roof paneling uses the space between the headliner of the cab and the vehicle's high roof (D03) as an additional storage facility. The compartment is accessible from the loading area and can support a load up to 77 lbs. (35 kg).

Aperture of the storage compartment: approx. 51.97 x 7.09" (1320 x 180 mm) with a depth of approx. 21.65 in (550 mm).

FF5	Shelf above Windshield	Compared to Sprinter 906		
		Carry Over	Advanced	New

The vehicles are fitted with storage plastic shelves for the driver and co-driver above the windshield. Openings in the storage shelves allow the occupants to easily see any stowed items from their seats. Each shelf has a dimension of 22.83 X 10.63" (580 mm X 270 mm) and has a carry capacity per shelf of approximately 5.50 lbs. (2.5 kg). A raised lip around the edge prevents stowed items from falling out. The side grab handles for the driver and co-driver are an integral part of the storage facility.

Benefits:

- Additional storage facility
- Additional grab handles for a safe hold

The storage compartment provides additional space for tidy storage of papers, documents or objects. The two grab handles also provide another option for holding on.

FF8	Overhead Storage Slot, Front Center	Compared to Sprinter 906		
		Carry Over	Advanced	New

An opening (1 DIN slot) is centrally located in the headliner above the windshield. This slot can be used for additional electronic devices. It comes with a cover for delivery and includes a cable set which reaches into the slot and offer the following connections:

- Terminal 15, Ignition
- Terminal 30, Battery plus
- Terminal 58d, Instrument lighting
- Terminal 31, Battery ground

Benefits:

Can accommodate 1-DIN-sized equipment. The slot can be used for installing 1-DIN-sized equipment (e.g., CB radio).

FG8	Cupholder Front	Compared to Sprinter 906		
		Carry Over	Advanced	New

With code FG8, a total of four-cup holders are included in the center console. The cup holders are suited for holding cans, cups or bottles up to 16 oz./500 ml. For cleaning, the cup holders can be removed.

FJ1	Hinged Lid for Storage Compartment	Compared to Sprinter 906		
		Carry Over	Advanced	New

This equipment allows the customer to store items out of sight allowing for a tidy atmosphere. The center storage compartment on the instrument panel may be fitted with a hinged lid via code FJ1. Complementary to this code, FJ5 offers two hinged lids for storage compartments on the left and right side. The cup holders on the left and right outside are then omitted.

The hinged lids can be opened using the corresponding buttons and remain in position when opened. All compartments with lids are fitted with rubber inlays.

The Hinged lid for storage compartment, code FJ1, is required for the following option codes:

- Code E1B, Tray for smartphones incl. wireless charging
- Code FJ5, Hinged lid for storage compartments left and right
- Code HH4, Thermotronic automatic climate control

Benefits:

The storage compartment with hinged lid allows items such as a clipboard, personal items, documents (e.g., freight papers), maps, etc., to be stored safely out of sight and within easy reach.

FJ4	Storage compartment underneath cockpit	Compared to Sprinter 906		
		Carry Over	Advanced	New

An open storage compartment is included on the co-driver's side. The dimensions of the storage compartment are 18.9 x 3.94 x 6.3" (480 x 100 x 160 mm) (Width x Height x Depth). FJ4 replaces the former lockable glove compartment.

FJ5	Hinged lid for storage compartments left and right	Compared to Sprinter 906		
		Carry Over	Advanced	New

This equipment allows the customer to store items out of sight and secure. The center storage compartment on the instrument panel may be fitted with a hinged lid via code FJ1. Complementary to this code, FJ5 includes two hinged lids for storage compartments on the left and right side. The cup holders on the left and right outside are then omitted. The hinged lids can be opened using the corresponding buttons and remain in position when opened. All compartments with lids are fitted with rubber inlays.

FJ6	Central Area with 2 DIN Storage Comp. + Air Vents	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code FJ6 includes two DIN storage compartments and two additional air vents in the upper central area of the instrument panel. Each air vent can be individually adjusted. This layout of the central area is standard for vehicles without pre-installation for radio or multimedia system. The dimensions of the storage compartments are 3.94 x 1.77 x 3.94" (100 x 45 x 100 mm) (Width x Height x Depth).

FJ7	Central Area with Storage Compartment	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code FJ7 includes a large storage compartment in the upper central area of the instrument panel and is only available when the air conditioning system code HH4/HH9 is omitted. The dimensions of this storage compartment are 18.11 x 3.94 x 4.72” (460 x 100 x 120 mm) (Width x Height x Depth).

FK3	Chrome Plated Radiator Grille	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code FK3 includes five chrome trim strips applied to the radiator grille and the grille frame comes always in the ordered vehicle color. The chromed radiator grille enhances the appearance of the vehicle.

FM3	Wet Wiper System	Compared to Sprinter 906		
		Carry Over	Advanced	New

The adaptive wind-screen wiper system provides the driver with an ideal view - even during the cleaning process. The cleaning fluid is sprayed directly in front of the wiper blades through its small nozzles and is wiped away immediately. In result of the directed distribution, the amount of cleaning fluid needed can be reduced by up to 50 % while still obtaining ideal cleaning results.

FQ6	Lockable Storage Compartment above Windshield	Compared to Sprinter 906		
		Carry Over	Advanced	New

The lockable compartment, code FQ6, is placed on the driver´s side above the windshield and complements a shelf. The hatch (approx. 13” x 3” (330 x 77 mm) opens upwards and remains in position. It can be locked using the emergency key attached to the key fob. The maximum dimensions of the lockable unit correspond to the size of the shelf is approx. 22.83” x 10.63” (580 x 270 mm).

FR3	Rear View Camera (Rear-View Mirror Display)	Compared to Sprinter 906		
		Carry Over	Advanced	New

For passenger, cargo and crew vans with the standard radio E10, the rear view camera FR3 is standard. This camera will display the area behind the vehicle, with the image appearing in the rear view mirror. This allows the vehicle to display areas that are not commonly visible to the driver. The image appears in the rear view mirror when shifting to reverse gear. The reversing camera switches off automatically

when the vehicle is driven in forward direction.

FR7	Pre-Wiring Rear View Camera (Head Unit Display)	Compared to Sprinter 906		
		Carry Over	Advanced	New

This code is only available for the cab chassis ordered with the MBUX multimedia system and includes the wiring harness located in the driver's seat frame. This allows the retrofitting of a Mercedes-Benz digital reversing camera. The wiring harness is already connected to the MBUX multimedia system and the reversing area is shown in the multimedia display.

Note: The MBUX multimedia system is only compatible with the original digital Mercedes Benz camera.

FR8	Rear View Camera (Head Unit Display)	Compared to Sprinter 906		
		Carry Over	Advanced	New

The reversing camera makes the rear area with an angle of 195° visible. When selecting the reverse gear the camera is activated and its picture displayed on the media system. The reversing camera switches off once the vehicle is driven forward at speeds > 10 mph (16 km/h). Yellow guide lines are displayed when reverse gear is engaged. They indicate the path which the vehicle would follow with the current steering wheel angle. The yellow guide lines are automatically adapted as the steering wheel angle changes. The outer guide lines symbolize the vehicle width including the outside mirrors.

Via a switch on the media system, the reversing camera can also manually be activated when driving in forward direction at speeds of up to 18 mph (29 km/h). The camera can remain active even when the rear doors are open. In the media system the driver can choose different perspectives for viewing the rear area:

- Rear view
- Wide-angle mode:

The wide-angle mode provides assistance when reversing into traffic areas that are not clearly visible. The reversing area is shown as a three-part view. This provides a clear view into a traversing road in good time, e.g. when reversing out of a narrow lane.

Trailer mode supports the driver when reversing to a trailer by zooming to the trailer hitch. To do so, special guide lines are shown in the display in addition to the pictures recorded by the reversing camera.

For additional safety, the rear view camera is activated when the rear doors are opened even if the van is not in reverse gear.

The reversing camera will be added with the multimedia system code E3M/E4M and replaces the standard camera FR3.

FS1	Mirror Holder for Vehicle Width 2150 up to 2300mm	Compared to Sprinter 906		
		Carry Over	Advanced	New

The exterior mirror is mounted on an extended mirror arm which improves rearward visibility, in case an extra-wide body is fitted. Code FS1 is for a vehicle width of 86 - 90" (2184 - 2286 mm)

FS2	Exterior mirror extended (for up to 96" box width)	Compared to Sprinter 906		
		Carry Over	Advanced	New

The standard exterior mirror is mounted on longer mirror arm and improves rearward visibility if an extra-wide body is fitted. Code FS2 is for a vehicle width of 90 - 92.9" (2190 - 2300 mm)

FU5	Exterior Mirror without Indicator	Compared to Sprinter 906		
		Carry Over	Advanced	New

With code FU5, the exterior mirrors are fitted without turn signal indicators. Due to the omission of the indicators the mirror housing is not as wide, thereby overall width of the vehicle is reduced by approx. 0.78" (20 mm) each side. Other dimensions and the geometry of the mirror glass, also in combination with code FS2, extra-long mirror bracket, remain identical with those of the serial exterior mirrors. The mirror heating, code F68 as well as F64, is not available.

FV1	Pre-Wiring Rear View Camera (Rear-View Mirror Display)	Compared to Sprinter 906		
		Carry Over	Advanced	New

For passenger, cargo and crew vans, a reversing camera with rearview mirror display is standard. This analog camera can display the area behind the vehicle, which would otherwise not be immediately visible for the driver. The camera picture is displayed in the rearview mirror when shifting to reverse gear. The reversing camera switches off automatically when the vehicle is driven forward.

For cab chassis the pre-installation, code FV1, includes the required wiring harness and the display in the rear-view mirror. This allows later installation of an analogue reversing camera (NTSC 60 Hz). The disconnecting points of the included wiring harness are located inside the driver's seat box for the cab chassis. The upfitter must supply their own analog camera.

FW1	Rear Wall Deletion - Chassis Cab	Compared to Sprinter 906		
		Carry Over	Advanced	New

The deletion of the cab rear wall allows upfitters to fit special bodies, which are accessible from the cab. The aperture is closed with a tarpaulin, which is necessary for transportation purposes.

The code FW1 is required when ordering one of the following equipment:

- Code F28, Cowl and doors
- Code F50, Cowl version
- Code SR8/SR9, Swivel base
- Code ZW4, Customer Winnebago C-Line

FW8	Deletion of passenger cab door, right	Compared to Sprinter 906		
		Carry Over	Advanced	New

This option code, FW8, deletes the passenger door on a cab chassis. The opening is covered with a tarpaulin for transportation purposes.

FW9	Deletion of driver's cab door, left	Compared to Sprinter 906		
		Carry Over	Advanced	New

This option code, FW9, deletes the driver door on a cab chassis. The opening is covered with a tarpaulin for transportation purposes.

FX4	Omit ASR-Off Function	Compared to Sprinter 906		
		Carry Over	Advanced	New

With this code the ESP function can no longer be turned off via the instrument cluster or if ordered, via the multimedia system. Not choosing this deactivation function can prevent possible damage to the rear axle (or other parts), which may be caused by improper driving.

FY1	Security Alarm w. Interior Motion Sensor	Compared to Sprinter 906		
		Carry Over	Advanced	New

The Anti-Theft Protection Package provides comprehensive protection for the vehicle and cargo. The battery-powered horn is not accessible from outside the vehicle and is independent of the on-board power supply. An inclination sensor integrated in the control unit offers tow-away protection. The anti-theft alarm system is armed automatically when the radio remote control is operated.

Alarm is triggered if:

- A door is opened
- A door is opened from the inside
- The hood is opened
- The vehicle is raised at the front or rear
- If movement is detected inside the vehicle
- If the central locking system is unlocked using the key at a door other than the driver's door

Benefits:

- Additional anti-theft protection
- Comprehensive anti-theft protection for vehicle and load
- Audible alarm: intermittent sounding of the self-powered horn for approximately 25 seconds
- Visual alarm: the turn signal indicators flash for approximately four minutes at twice the normal rate

FY7	Optional 3- Button Keys	Compared to Sprinter 906		
		Carry Over	Advanced	New

The multi-button radio remote control allows for selective locking and unlocking of the load compartment (sliding and rear doors). For cab chassis, this function is available for programming of vehicle conversions/additions. When ordering the electric sliding door the multi-button radio remote control is required. The sliding doors can then be lock and unlocked as well as opened and closed using the remote control key.

FZ9	Keys, Two Additional Masters	Compared to Sprinter 906		
		Carry Over	Advanced	New

Two extra master keys are provided in addition to the two keys supplied as standard.

Benefits:

Customer is provided with four keys (e.g., for taxi companies or large fleets).

G42	Automatic Transmission, 7G-TRONIC PLUS	Compared to Sprinter 906		
		Carry Over	Advanced	New

The Automatic Transmission 7G-TRONIC PLUS is electronically controlled with seven forward gears and one reverse gear. The gear ratios for the gear ranges are planetary gear sets. All the transmission functions and components for this transmission are combined in one assembly module. The integration of the electric controller unit in the transmission means that the interfaces to the wiring harness have been minimized. The service life can be increased, the fuel consumption reduced, the gearshift comfort improved and

maintenance intervals revised by using optimized transmission components, a new automatic transmission fluid and by reducing working pressure and implementing software modifications. The engine performance is transmitted via a torque converter with an integrated torque converter lock up clutch. The torque converter lock up clutch minimizes the performance, reducing slip of the torque converter. Depending on the rotational speed and engine load the torque converter lock up clutch is switched into all gears slip-controlled. With this system an almost deceleration-free and comfortable shifting is achieved. The 5th forward gear is designed as a direct gear. The 6th and 7th gear is conceived with longer ratio enabling potential reduction of fuel consumption through lower rotational speed.

Benefits:

- Very smooth shifting
- Long service life and high reliability
- Low maintenance costs
- Low fuel consumption

Both Automatic Transmissions come with following functions:

Kick-down

The kick-down sets in when the accelerator is pushed past the pressure point. During this mode the acceleration is at its maximum. Depending on the engine rpm, the automatic transmission shifts to a lower gear and at maximum engine rpm to the next higher gear. The engine cannot be over-revved during this process. During kick-down the gear cannot be shifted using the switch paddles.

Gear Shift

To shift, the driver can use the gear shift located on the right side behind the steering wheel or the two flat rocker switches on the back of the steering wheel. The current driving mode is shown in the display of the instrument cluster.

Technical data	
Automatic transmission	G42 722.908 / T7C700
Shift	7-speed, automatic
Number of ratios	7 + R
Gear ratio spread	6.016
Weight complete	approx. 92.4 kg
Transmission ratio	
1st gear	4.377
2nd gear	2.859
3rd gear	1.921
4th gear	1.368
5th gear	1
6th gear	0.82
7th gear	0.728
8th gear	n/a
9th gear	n/a
Reverse gear	-3.416

To put the transmission into drive (D) or reverse gear (R), the brake has to be engaged and the gear shift pushed past the first resistance – up for reverse gear, and down for drive. To put the transmission into neutral gear (N) from Drive (D) the lever is pushed up, while from reverse gear (R) the gear shift is pushed down to the first resistance setting. In order to switch from park (P) to neutral (N), the break

must be engaged and the gear shift pushed either up or down to the first resistance. When in drive (D), the driver can shift manually using the paddle switches on the steering wheel. To return to automatic, mode position (D) must be re-selected. To put the transmission into park (P), the button on the gear switch must be pushed.

R = Reverse gear
 N = Neutral
 P = Park with parking lock
 D = Drive

G43	Automatic Transmission, 9G-TRONIC	Compared to Sprinter 906		
		Carry Over	Advanced	New

The Automatic Transmission 9G-TRONIC is fully electronically controlled with nine forward gears and one reverse gear. The gear ratios for the gear ranges are realized with planetary gear sets. All transmission functions and components are combined in one assembly module. The fully integrated transmission controller unit is located in the automatic transmission. This minimizes the number of interfaces to the vehicle wiring harness.

The fully integrated transmission control has the following advantages:

- High electromagnetic compatibility (prevention of interaction between multiple electronic components)
- Fast current control as well as the compensation of on-board electrical system fluctuations, which leads to increased shift quality.
- Accurate determination of measurements relevant to shift operations and faster evaluation of the measured values

This automatic transmission excels due to the following features that increase its service life, reduce fuel consumption and increase smoothness of gear changes:

- Transmission set-up with nine gears and gear ratio spread of 9.156
- Optimized transmission components
- Low working pressure
- Transmission housing with mechanical transmission components

Both Automatic Transmissions come with following functions:

Technical data	
Automatic transmission	G43 725.018 / W9B500
Shift	9-speed, automatic
Number of ratios	9 + R
Gear ratio spread	9.156
Weight complete	approx. 95 kg
Transmission ratio	
1st gear	5.503

Kick-down

The kick-down sets in when the accelerator is pushed past the pressure point. During this mode the acceleration is at its maximum. Depending on the engine rpm, the automatic transmission shifts to a lower gear and at maximum engine rpm to the next higher gear. The engine cannot be over-revved during this process. During kick-down the gear cannot be shifted using the switch paddles.

2nd gear	3.333
3rd gear	2.315
4th gear	1.661
5th gear	1.211
6th gear	1
7th gear	0.865
8th gear	0.717
9th gear	0.601
Reverse gear	-4.932

Gear Shift

To shift the vehicle into different gears, the driver can use the gear stalk located on the right side behind the steering wheel or the two paddle shifters on the back of the steering wheel. The current driving mode is shown in the display of the instrument cluster.

To put the transmission into drive (D) or reverse gear (R), the brake has to be engaged and the gear shift pushed past the first resistance – up for reverse gear, and down for drive. To put the transmission into neutral gear (N) from Drive (D) the lever is pushed up, while from reverse gear (R) the gear shift is pushed down to the first resistance setting. In order to switch from park (P) to neutral (N), the break must be engaged and the gear shift pushed either up or down to the first resistance. When in drive (D), the driver can shift manually using the paddle switches on the steering wheel. To return to automatic, mode position (D) must be re-selected. To put the transmission into park (P), the button on the gear switch must be pushed.

R = Reverse gear
 N = Neutral
 P = Park with parking lock
 D = Drive

H00	Warm/Cool Air Duct to Rear Compartment	Compared to Sprinter 906		
		Carry Over	Advanced	New

The hot-air duct to the rear passenger compartment is installed between driver and co-driver’s seats. The hot air duct supplies the rear passengers with warm air when the air distribution control is set to ventilate the foot well.

Benefits:

- Enhanced comfort for passengers in the rear compartment
- Improves the warm/cool air supply to the passenger
- Improves passenger comfort and well-being by providing enhanced heating/cooling

H01	Heat Insulation, Rear Compartment	Compared to Sprinter 906		
		Carry Over	Advanced	New

Insulation material is fitted up to the belt rail in the sidewalls of the load/passenger compartment and in the rear doors.

Benefits:

Reduces heat loss at low ambient temperatures. The insulation reduces heat losses at low outside temperatures.

H04	Heat Insulation, Front Compartment	Compared to Sprinter 906		
		Carry Over	Advanced	New

Code H04 includes the insulation mats in the front doors and in the rear- / partition wall. The insulation reduces heat losses at low outside temperatures.

Benefits:

Reduces heat loss at low ambient temperatures. The insulation reduces heat losses at low outside temperatures.

H08	Air Conditioning Rear, Roof-Mounted	Compared to Sprinter 906		
		Carry Over	Advanced	New

The rear air conditioning system is mounted onto the rear part of the roof and partially on the inside roof of the vehicle that comfortably cools the rear compartment. Compared to MY18 the roof unit is located more towards the rear of the vehicle.

The code H08, is powered by the same compressor as the front air conditioning system, and together has a maximum cooling output of 47,800 BTU (14 kW). This system comes with two evaporator/fans and works in fresh-air and recirculated-air mode. The quality of the interior air is ensured by pollen and particle filters.

The AC unit is operated via the rocker switches to manage venting levels (seven venting levels) and the desired temperature. The temperature is controlled automatically through air blending vents. Depending on the vehicle length, the cool air can be distributed over up to 16 individually adjustable air vents in the ceiling. If required, these may be closed completely. Because of the roof canal, the interior height is reduced by 3.94" (100 mm). The evaporator is mounted underneath a hood on the top of the vehicle roof. This increases the vehicle height by about 7.48" (190 mm). The roof hood is only available in color anthracite MB 9B51 but can be painted.

Benefits:

- Optimizes interior climate in rear section
- Must-have for comfort and well-being for passengers in the rear for hot climates
- Improves interior air quality

H12	Fuel-Fired Pre-Heater/Booster (17K BTU)	Compared to Sprinter 906		
		Carry Over	Advanced	New

In addition to the heater booster, with the auxiliary hot-water heater, the departure time can be programmed in the instrument cluster using the stationary heater button in the climate control panel on the multi steering wheel.

The colors of the indicator lamps above the stationary heater button have the following meanings:

- blue: auxiliary ventilation is switched on
- red: auxiliary heating is switched on
- yellow: departure time is preselected

In ventilation mode, the climate-control unit actuates the blower motor and the indicator lamp in the stationary heater button continues to light up in blue. The maximum ventilation/heating time is 50 minutes. The auxiliary heater has a maximum heating capacity of 5.5 kW and is supplied with fuel from the fuel tank until the fuel supply drops to 15 l/1.3 gallons. The air is supplied to the interior through the existing air outlets in the instrument panel or optionally H00 and H13.

Benefits:

- Comfortably warm interior
- Aids defrosting of the windows
- Protects the engine by preheating the coolant prior to starting

This system is particularly recommended for vehicles with engines which will be used in very cold climate regions. Since these engines are extremely efficient, their thermal energy may not always be sufficient in extremely low ambient temperatures. With this option it allows for a comfortable level of warmth in the cab. The stationary heating function allows the interior to be warmed even before the engine is started, so when the driver steps into the cabin it is pleasantly warm right from the start.

H13	Rear Cabin Heater and Vents	Compared to Sprinter 906		
		Carry Over	Advanced	New

The additional heat exchanger is mounted underneath the vehicle floor on the left side behind the B-pillar. With this comes an air duct in the rear passenger/load compartment on the left side on top of the wood or plastic flooring. The heat exchanger can be activated/deactivated using the climate control panel and set to three different levels. It is connected to the water circuit of the front heating system, and is only operational when the engine is running. The code HH4, THERMOTRONIC, is only available in combination with

code H08 or code HK4, Roof-mounted air conditioning system.

Benefits:

Provides warm air flow for rear passenger compartment. Improved heating effectiveness throughout the load/passenger compartment with the engine switched on.

H15/ H16	Heated Front Passenger/Driver Seat	Compared to Sprinter 906		
		Carry Over	Advanced	New

The heated seats are equipped with heating filaments in the seat cushion and backrest which are controlled by three-stage switches in the front door panels. When stage three is turned on for rapid heating, the system will run for approx. 7 minutes then automatically switches to stage two. After approx. 10 minutes, the seat heating automatically switches to stage one. The seat heating is automatically switched off after a further 20 minutes. It can be switched off manually at any time.

Benefits:

Cold seats can be warmed up immediately, even before the vehicle heating system has had a chance to warm the interior. In cold weather, comfort is ensured right from the start of the journey.

H11	Front-to-Rear Outlet in Instrument Panel	Compared to Sprinter 906		
		Carry Over	Advanced	New

Two additional air vents are installed in the center storage compartment on the instrument panel. These vents are adjustable and distribute exclusively cooled air. Heating up is not possible in this case.

The air vents must be ordered with:

- Code E1B, Tray for smartphones incl. wireless charging
- Code F50, Cowl version

H20	Heat-Insulating Glass	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code H20 includes green-tinted laminated safety glass for the windscreen and single-layer safety glass for all other windows. This ensures less heating up in the cockpit as well as in the load or passenger compartment even when the vehicle is exposed to very intensive sunlight.

H21	Windshield with Filter Band	Compared to Sprinter 906		
		Carry Over	Advanced	New

Green-tinted laminated safety glass with a darker tinting along the upper edge of the windscreen and a mounting plate for the interior mirror. The band filter reduces dazzle when the sun is low in the sky, but without impairing the driver's view of the traffic. The mounting plate allows an easy retrofitting of the interior mirror.

Benefits:

- Reduces heating of the interior
- Prevents dazzle when the sun is low
- Enhances the look of the vehicle

The tinting reduces heating of the interior when the vehicle is exposed to direct sunlight, and thus also reduces heating of the steering wheel and dashboard. The filter band reduces dazzle when the sun is low in the sky, but without impairing the driver’s view of traffic lights.

H22	Rear Window Defroster	Compared to Sprinter 906		
		Carry Over	Advanced	New

Windows with heating filaments are fitted in the rear doors. The rear window heating function is switched on by a switch with integral indicator light. The rear window heating function can only be switched on when the engine is running. It switches off automatically after approximately 5 minutes, or can also be switched off manually

Benefits:

- Ice on the rear windows is quickly thawed
- No fogging of rear windows
- Improved rear view of traffic

Prevents fogging of the rear windows in damp weather and at low outside temperatures. Ice on the rear windows is quickly thawed. Unimpeded rearward visibility ensures safe driving and maneuvering.

H72	Roof Fan, Electric	Compared to Sprinter 906		
		Carry Over	Advanced	New

The electric roof fan is installed centrally on the roof towards the sliding door and increases the rate of air intake in the load compartment and also provides ventilation. It is operated using the button located right of the steering wheel. Pressing the upper section of the roof ventilator button actuates the roof fan motor and the air is drawn out of the vehicle’s load compartment and the lower section start the ventilation.

- Air delivery: 350 m³/h
- Max. power input: 32 W
- Roof assembly: overall height 4.92” (125 mm) increased

Benefits:

Improves air intake and ventilation in the load compartment.

H88	Rear Heater Prep	Compared to Sprinter 906		
		Carry Over	Advanced	New

Two water lines (supply line/return line) are routed under the floor panel on the left-hand side of the vehicle, extending after the B-pillar. The ends of the two lines are connected by a hose. This allows an easier fitting of aux. heater exchanger from the accessories range. The opening in the floor (cargo/passenger van) /wooden floor for the warm air ducting and electrical parts e.g. climate control panel, wiring harness are not included.

Benefits:
Simplifies installation of the aftermarket heat exchanger in the rear passenger compartment

The pre-installation package is recommended upfitters who offer their own and not ex-factory hot-water heating systems.

H91	Deletion Air Conditioning System	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code H91 is a heating and ventilation system without integrated air conditioning, air recirculation mode and any dust filter. The system is operated via the heating control panel placed in the upper center console.

HH2	Heater, Auxiliary Electric Hot Air	Compared to Sprinter 906		
		Carry Over	Advanced	New

The heater booster consists of radiator elements (fins) that are fitted with PTC (positive temperature coefficient) resistors and are held together in a mounting frame by spring clips. When an electric voltage is applied to the heater elements, an electric current flows through the PTC resistors, which heat up. The fins absorb the heat and radiate it to the passing air. As soon as the engine is running, the electric heater booster steadily increases its power from 0 to 100% in the space of 28 seconds. The heater booster is situated in close proximity to the air outlets, to keep heat losses to a minimum. The warmed air is circulated into the interior via the vehicle heater/blower system.

Switch-on conditions:

Coolant temp. < 80 °C (176°F) and ambient temp. < 10 °C (50°F).

Switch-off conditions:

Coolant temp. > 80 °C (176°F) and ambient temp. > 13 °C (55°F).

Benefits:

- Aids quick defrosting of the windows
- Quick defogging

- Quicker warming of the interior
- Environmentally friendly, robust, long service life

The electric PTC heater booster is environmentally friendly, since no emissions are generated. Despite its lightweight and compact design it is robust, has a long service life and is highly efficient. The PTC resistor has self-regulating properties that prevent overheating. The heater booster accelerates defrosting of windows and counteracts window fogging. It provides faster heating of the interior and improves comfort on cold days.

HH4	Thermotronic automatic climate control	Compared to Sprinter 906		
		Carry Over	Advanced	New

In addition to the TEMPMATIC standard A/C, the HH4 air conditioning system THERMOTRONIC is also available. HH4 is a single-zone automatic air-conditioning, which provides a constant climate by taking into account external factors such as solar irradiation, exterior and interior temperature.

The installed sensors monitor interior temperature, air volume and air distribution when the AUTO function is activated and will regulated the conditions automatically. A filter with a special layer of activated carbon protects from unpleasant odors, dust, pollen and harmful substances. The integrated dehumidifier reliably prevents the windows from steaming up.

Note: The front-to-rear outlets on the instrument panel, Code H11, exclusively distributes cool air.

HH9	Air Condition, Front	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code HH9, air conditioning system TEMPMATIC, is standard equipment for all vehicles. The Tempmatic enables a pleasant interior climate for the passengers in different weather conditions. The Tempmatic is a semi-automatically regulated air conditioning system with a maximum cooling output of approx. 24K BTU (7 kW) and is controlled by buttons and switches integrated in the climate control. Ventilation ensures air circulation in the vehicle interior. The fresh air is cleaned by a particle filter. The user can switch select between fresh

air and air recirculation mode. The airflow can be set in seven steps and a temperature selector switch is used to set the desired temperature. Apart from the display of the control unit the air-conditioner settings can also be viewed on the optionally available multimedia system, code E3M/E4M.

Benefits:

- An pleasant interior temperature is maintained even in hot weather
- Integrated filter protects against dust and pollen
- Dehumidification prevents fogging in cold, damp weather
- The filter protects against allergic reactions by preventing pollen, dust and odors from entering the vehicle.

HK4	Rear Air Conditioner Heavy-Duty	Compared to Sprinter 906		
		Carry Over	Advanced	New

The rear air conditioning system is mounted onto the rear part of the roof and partially on the inside roof of the vehicle that comfortably cool the rear compartment.

The high-performance air-conditioning system, code HK4, has its own refrigerant compressor condenser with a maximum cooling output of 37,500 BTU (11 kW). In combination with one of the front AC units, code HH9/HH4, the total output is 62,400 BTU (18 kW). Temperature and venting levels can be activated and set for cab and the rear passenger compartment separately.

The AC unit is operated via the rocker switches to manage venting levels (seven venting levels) and the desired temperature. The temperature is generated automatically through air blending vents. Depending on the vehicle length the cooled air can be distributed over up to 16 individually adjustable air vents in the ceiling. If required, these may be closed completely. Because of the roof canal the interior height is reduced by 3.94" (100 mm). The evaporator is mounted underneath a hood on the top of the vehicle roof. This increases the vehicle height by about 7.48" (190 mm). The roof hood is only available in color anthracite MB 9B51 but can be painted.

HY1	Remote control for auxiliary heater	Compared to Sprinter 906		
		Carry Over	Advanced	New

The radio remote control allows turning the stationary heater on and off from a distance and thereby ensures pleasant temperatures in the vehicle interior already when getting in. In addition, the heated interior can ensure fog-free windows already before the start of the trip. The driver can set the departure time with the radio remote control (within 300 m of the vehicle) or in the instrument cluster. The vehicle then automatically calculates the activation time of the auxiliary heating to reach the preset interior temperature by the time of departure in dependence of the outside temperature and the weather conditions. The maximum heater operating time is 50 minutes.

HZ9	Fuel-Fired Heater Booster (18,800 BTU)	Compared to Sprinter 906		
		Carry Over	Advanced	New

The 18,800 BTU (5.5 kW) heater booster (for diesel engines only) can only be activated when the engine is running. The heater booster is a compact water heater that is connected to the engine coolant circuit. The heater booster can be activated manually with the stationary heater button in the climate control panel or automatically as required at an outside temperature of less than 32 F (0 °C). The indicator lamp in the stationary heater button continues to light up in red when the heating is switched on.

The air is supplied to the interior through the existing air outlets in the instrument panel or if optionally fitted with H00 and H13. After the heater booster has been switched off, the coolant pump and the burner blower continue running for approximately 3 minutes, then switch off automatically.

Benefits:

- Engine reaches optimal operating temperature quickly
- Faster heater response

This system is particularly recommended for vehicles with engines that will be used in very cold climate regions. Since these engines are extremely efficient, their thermal energy may not always be sufficient in extremely low ambient temperatures. This helps to guarantee a comfortable level of warmth in the cab.

J11	Speedometer, miles/km	Compared to Sprinter 906		
		Carry Over	Advanced	New

All vehicles with country code USA display mph and Fahrenheit in the instrument cluster via code J11.

Benefits:

The speed indication in the digital display can be given in km/h and mph.

J1V	Pre-installation blind spot assist	Compared to Sprinter 906		
		Carry Over	Advanced	New

Blind Spot Assist and Exit Warning is offered on cab-chassis to increase the safety and comfort of the customers.

Blind Spot Assist provides:

- Visual and acoustic warning to alert the drivers when changing lane or reversing
- If a vehicle is detected in the blind spot, red triangle appears in the corresponding side mirror
- If the respective turn signal is activated despite this warning, the triangle starts to flash quickly and acoustic warning is sounded

Exit Warning provides:

- Visual and acoustic warning to alert of an approaching vehicle when exiting the driver and/or passenger doors
- Available only when the Blind Spot Assist is active and up to three minutes after turning off the ignition.

Pre-installation of Blind Spot Sensor (J1V) package includes:

- 2 Blind spot sensors

- 2 Plastic brackets
- 2 Covers
- Wiring harness interface placed in the driver seat box

Blind spot sensor must be placed in the specified area provided by Mercedes-Benz, in the rear of the vehicle. For more information, please refer to the technical bulletin 'Installation of Blind Spot Sensor (J1V) available on www.upfitterportal.com.

J51	Fuel Gauge, Optimized for Aux. Fuel Tap	Compared to Sprinter 906		
		Carry Over	Advanced	New

In the standard specification, the fuel level display in the instrument cluster is controlled solely by the fuel consumption as calculated by the on-board computer. The level is only reconciled with the fuel level sensor in the tank and corrected when refueling is detected. With this code, the fuel level display in the instrument cluster is reprogrammed so that it is solely controlled by the fuel level sensor in the tank, and shows the approximate amount of fuel remaining in the tank.

Benefits:

- The approximate amount of fuel remaining in the tank is shown in the instrument cluster
- Protection against unexpectedly running out of fuel due to an incorrect fuel level shown in the instrument cluster
- This code is recommended for vehicles that operate auxiliary consumers via the KL1 auxiliary fuel tap

J52	Engine Oil Level Display at Cold Start	Compared to Sprinter 906		
		Carry Over	Advanced	New

When parking the vehicle for a longer period of time, the last saved oil level is displayed at the start of the engine. The notification must be acknowledged by the driver. In addition, the oil fill level can be accessed via the service menu on the instrument cluster. It also scans a too low/high oil level in order to prevent engine damage.

J55	Seat belt warning for passenger seat	Compared to Sprinter 906		
		Carry Over	Advanced	New

The seat belt warning for driver's seat, code J58, is now complemented by the seat belt reminder for passenger seat, code J55. The seat belt reminder for driver and co-driver increases the passive safety level. An optical signal in the instrument cluster reminds the driver or co-driver to buckle up when starting the vehicle. If this is ignored and the vehicle is in motion 15 mph (25 km/h) an acoustic signal sounds.

J58	Seat belt reminder, driver	Compared to Sprinter 906		
		Carry Over	Advanced	New

An optical signal in the instrument cluster reminds the driver to buckle up when starting the vehicle. If this is ignored and the vehicle is in motion 15 mph (25 km/h) an acoustic signal sounds.

Benefits:

Reminds the driver to fasten the safety belt, thereby indirectly increasing passive safety.

J65	Outside temperature gauge	Compared to Sprinter 906		
		Carry Over	Advanced	New

The temperature sensor is mounted in the front bumper and displays the current outside temperature in the instrument cluster.

Benefits:

Displays the current outside temperature. The temperature display gives the driver advance warning of icy conditions.

JA7	Blind spot assist	Compared to Sprinter 906		
		Carry Over	Advanced	New

The Blind Spot Assist monitors the rear and side areas of the vehicle using two short-range radar sensors located in the rear bumper. The detection range covers an area of 137" (3.5 m) of both sides of the vehicle and 118" (3 m) to the rear starting at the B-pillar. If a vehicle is detected in the blind spot, a red triangle appears in the corresponding side mirror. Should the driver activate the indicator to change lanes despite this optical warning, the red triangle will start to blink and an acoustic signal will sound. In addition, this assistance system can be activated or deactivated manually via the menu on the on-board computer or the multimedia system.

The Blind Spot Assist includes following functions:

Rear Cross Traffic Alert

Automatic braking to avoid collision with traffic crossing the vehicle’s path (e.g. vehicles, pedestrians) when reversing. If an object is registered, the warning symbol on the corresponding side mirror lights up in red and additionally, an acoustic warning signal sounds. In combination with the parking package, code JB6/JB7, a warning signal appears in the multimedia system in case of critical situations

Exit Warning

If an approaching vehicle is registered, the exit warning can alert the passengers when exiting the vehicle. The system is only available when the Blind Spot Assist is activated and up to three minutes after turning off the ignition. If an object with little safety distance is registered while the cabin doors are opened, an optical and acoustic warning follows. The exit warning is not issued for sliding doors and rear doors.

Benefits:

- Aids in lane changes can help to prevent blind spot-related collisions.

Notice: Blind Spot Assist is not available when driving with a trailer.

JA8	Crosswind assist	Compared to Sprinter 906		
		Carry Over	Advanced	New

The Crosswind Assist detects sudden strong wind blasts impacting laterally the vehicle and helps to avoid that the vehicle unintentionally drifts away via targeted, one-sided intervention on the brake. The Crosswind Assist works at a speed from 50 mph / 80 km/h up to maximum vehicle speed. When a wind blast is registered the wheels facing the wind side will brake according to the situation. The braking pressure depends in this case on the wind strength. The system is principally activated and can only be deactivated in very certain use cases involving very large upfits on the vehicle. Please contact your nearest authorized Mercedes-Benz dealer for more information. In case of a considerably noticeable system intervention, the driver is informed via the instrument cluster. Slight or not noticeable system intervention will not be notified. When the system recognizes a safety critical situation (for example ESP-intervention, aquaplaning) the Crosswind Assist will not intervene. The steering behavior gives information whether the driver is active and compensates itself wind blasts through steering correction. In this case the intervention of the system will diminish.

Benefits:

- Helps to keep the vehicle on course in strong crosswinds
- Corrects the course by means of automatic braking intervention
- Helps to avoid inappropriate reactions by the driver

JA9	Traffic sign assist	Compared to Sprinter 906		
		Carry Over	Advanced	New

This assistance system can detect road signs, such as speed limit, no entry and no passing zones using a multifunction camera mounted to the inside of the windshield. It can recognize signs on the side of the road, on overhead gantries and in construction sites. Their data is compared with the information of the navigation system and is displayed in the instrument cluster and in the navigation map view. The connection to the navigation system ensures that the driver receives information on the current speed limit and other important restrictions even when no road signs are present. In the case of restricted access with corresponding signage, a visual and acoustic warning is additionally output in the instrument cluster.

A visual and acoustic warning can also be issued when a speed limit is exceeded. This can be selected and configured using the head unit. The driver can select the operating modes visual warning, visual, and acoustic warning off. A maximum of two speed limits and additional signage are shown at the same time. If several speed limits are detected, the lowest speed limit is displayed.

JB4	Active lane keeping assist	Compared to Sprinter 906		
		Carry Over	Advanced	New

The lane assist detects when the vehicle crosses lane markings and is activated at speeds between 37 mph (60 km/h) and the maximum speed. The camera registers clear road markings by comparing the difference in contrasts of road surface and clear road markings. An electronic control unit processes the camera data, the driver's activity, and calculates if a lane change is intentional or not. If an un-intentional lane change is registered the assistance system sends out an acoustic, visual and, haptic warning to the driver through vibrations on the steering wheel. If the vehicle un-intentionally crosses a solid lane marking and the driver does not respond to the warning, the Active Lane Keeping Assist will correct the vehicle's course through targeted brake interventions on one side. If the driver indicates activity before or during the intervention by the brake system, the intervention is cancelled. The Assist can be activated/deactivated in the on-board computer and, if optioned with on the multimedia system. If a lane-correction brake application occurs, a display appears in the multifunction display.

If the vehicle un-intentionally crosses a solid lane marking and the driver does not respond to the warning, the Active Lane Keeping Assist will correct the vehicle's course through targeted brake interventions on one side. If the driver indicates activity before or during the intervention by the brake system, the intervention is cancelled. The Assist can be activated/deactivated in the on-board computer and, if optioned with on the multimedia system. If a lane-correction brake application occurs, a display appears in the multifunction display.

JB6	Parking package with 360 degree camera	Compared to Sprinter 906		
		Carry Over	Advanced	New

In addition to twelve distance sensors the 360° camera system has four digital cameras. One camera behind the radiator trim, one in each side mirror housings and one on the rear roof. The parking system uses picture data to generate various views of the vehicle's surroundings which are shown in real time in the multimedia display. The views can be generated either from one camera or from four cameras. Depending on the view, dynamic guide lines are displayed to assist the driver. They indicate the path which the vehicle would follow with the current steering wheel angle. The yellow guide lines are automatically adapted as the steering wheel angle changes. The outer guide lines symbolize the vehicle width including the outside mirrors.

Via a switch on the media system the reversing camera can also manually be activated when driving in forward direction at speeds of up to 18 mph (29 km/h). The camera also works with opened rear doors. The cameras cover an area of about 118 inch (3 m) in front and behind, and about 98 inch (2.5 m) to the left and right side of the vehicle.

JB6 requires F64 and is only available for vehicles below 10,000lbs.

Additional features:

Parktronic

The Parktronic is an electronic parking aid with ultrasound and uses six distance sensors in the front bumper and six distance sensors in the rear bumper to monitor the vehicle's surroundings. The Parktronic provides a visual and acoustic indication of the distance between the vehicle and an obstacle. The volume of acoustic warnings can be adapted in the multimedia system.

Rear Cross Traffic Alert (with code JA7, Blind Spot Assist)

Automatic braking to avoid collision with traffic crossing the vehicle's path (e.g. vehicles, pedestrians) when reversing. If an object is registered the warning symbol on the corresponding side mirror lights up in red and additionally, an acoustic warning signal occurs. A warning signal appears in the multimedia system in case of critical situations.

Drive Away Assist

If an obstacle is registered in the driving path, it temporarily limits the driving speed to 1.8 mph (3 km/h). In critical situations a warning symbol is displayed via the multimedia system.

JB7	Parking package	Compared to Sprinter 906		
		Carry Over	Advanced	New

The parking system is using twelve distance sensors and the reversing camera. It supports the driver during the parking procedure, when maneuvering in confined spaces and when driving out of exits.

The parking system ensures greater safety when parking and maneuvering due to:

- Visual and acoustic warnings of objects in front of and behind the vehicle as well as at the side of the vehicle
- Speed limitation when driving off if obstacles are detected in the direction of travel (Drive Away Assist)

JB7 uses one digital camera on the rear roof end (FR8). Dynamic guide lines are displayed when the reverse gear is engaged and irrespective of the current wheel angle. If the rear door is open, this is indicated in the view.

Additional features:

Parktronic

The Parktronic is an electronic parking aid with ultrasound and uses six distance sensors in the front bumper and six distance sensors in the rear bumper to monitor the vehicle’s surroundings. The Parktronic provides a visual and acoustic indication of the distance between the vehicle and an obstacle. The volume of acoustic warnings can be adapted in the multimedia system.

Rear Cross Traffic Alert (with code JA7, Blind Spot Assist)

Automatic braking to avoid collision with traffic crossing the vehicle’s path (e.g. vehicles, pedestrians) when reversing. If an object is registered the warning symbol on the corresponding side mirror lights up in red and additionally, an acoustic warning signal occurs. A warning signal appears in the multimedia system in case of critical situations.

Drive Away Assist

If an obstacle is registered in the driving path, it temporarily limits the driving speed to 1.8 mph (3 km/h). In critical situations a warning symbol is displayed via the multimedia system.

JB8	360 degree camera	Compared to Sprinter 906		
		Carry Over	Advanced	New

In addition to twelve distance sensors the 360° camera system has four digital cameras. One camera behind the radiator trim, one in each side mirror housings and one on the rear roof. The parking system uses picture data to generate various views of the vehicle’s surroundings which are shown in real time in the multimedia display. The views can be generated either from one camera or from four cameras. Depending on the view, dynamic guide lines are displayed to assist the driver. They indicate the path which the vehicle would follow with the current steering wheel angle. The yellow guide lines are automatically adapted as the steering wheel angle changes. The outer guide lines symbolize the vehicle width including the outside mirrors.

Via a switch on the media system the reversing camera can also manually be activated when driving in forward direction at speeds of up to 18 mph (29 km/h). The camera also works with opened rear doors. The cameras cover an area of about 118 inch (3 m) in front and behind, and about 98 inch (2.5 m) to the left and right side of the vehicle.

JF1	Rain sensor	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code JF1, Rain sensor, automatically regulates the activity of the wind-screen wiper when set to interval. It is located centrally at the top behind the wind screen and registers wetness levels on the sensor surface. The rain sensor can be set to two different wiping speeds and the sensitivity of both settings can be further differentiated.

The code JF1 is required for the following equipment:

- Code FM3, Wet wiper system
- Code HH4, Thermotronic automatic climate control

JH3	Communication module (LTE) for dig. services	Compared to Sprinter 906		
		Carry Over	Advanced	New

The Communication Module (LTE) for Digital Services is standardly integrated in every U.S. vehicle. The built-in SIM card is required for connectivity services and provides a fast and reliable LTE internet connection used for the Emergency Call System, Live Traffic Information, and other Mercedes me connect services. Use of Mercedes me connect services requires the customer to register through the Mercedes me connect Portal and accept the Terms of Use in addition to an authorized dealer linking the vehicle to the customer's account, all of which can be done on the Mercedes me connect Portal.

JK5	Instrument cluster with color display	Compared to Sprinter 906		
		Carry Over	Advanced	New

JK5 has two large chrome-lined analogue displays for vehicle speed in km/h or mph, engine rpm, fuel fill level, and temperature. A centrally placed high-resolution 5.5" color display allows the driver to easily view and browse the menu using the upper left touch-control panel on the multifunctional steering wheel.

Depending on the vehicle equipment, all vehicle information can be accessed:

Navigation

- Radio
- Media
- Telephone
- Service
- Vehicle Settings
- Assistance
- Trip computer with ECO-Score and average fuel consumption

JK5 is required for the following options:

- Code E4M, MBUX Multimedia system with 10.25-inch Touchscreen
- Code ET4, Active Distance Assist DISTRONIC
- Code JA9, Traffic Sign Assist

JW0	Backup alarm	Compared to Sprinter 906		
		Carry Over	Advanced	New

When reverse gear is selected with the ignition switched on, an audible signal (~90dB) is activated. If reverse gear is engaged twice within five seconds, the volume of the reversing warning signal switches to the quieter setting. This procedure must be repeated every time a reversing operation is to be performed with reduced signal volume. The reversing warning system cannot be switched off. Switching off the ignition reactivates the default setting. The horn for the reversing warning system is normally fitted on the inside of the end cross member. A sticker stating "Engage reverse gear twice in quick succession to set the reversing beeper to the quieter nighttime setting" is enclosed with the vehicle document wallet.

Benefits:

An audible warning signal alerts passerby's that a vehicle is reversing.

JW2	Deactivation lamp monitoring failure	Compared to Sprinter 906		
		Carry Over	Advanced	New

This code allows upfitters to connect their own or additional lights to the vehicle but must take into account the maximum lamp load. The maximum lamp loads can be found in the latest Mercedes-Benz Body and Equipment guideline for Sprinters. When the bulb failure indicator is active, the signal acquisition and control module (SAM) for torn wires and short circuit monitors the exterior lighting. If a light bulb with output other than the vehicle's standard is connected, an error message is entered in the control unit log, and the driver is informed via a message displayed in the instrument cluster.

- License plate light: 1.0 A
- Backup light: 2.4 A
- Turn signal: 1.75 A -1.96 A (maximum 2.1 A)
- Fog light: N/A (tape back)
- Tail light: 1.0 A

When using LEDs, a resistor must be used to compensate for the lower amp draw. Turn signal LEDs amp draw is recommended to be between 1.75 A – 1.96 A (maximum 2.1 A) otherwise rapid flashing will occur.

Standard on cab chassis.

JW8	Attention assist	Compared to Sprinter 906		
		Carry Over	Advanced	New

The Attention Assist supports the driver during long trips by monitoring the driver's attention level. When the system recognizes signs of fatigue or decreasing attention levels, it will suggest taking a break. The assistance system generates an individual driver profile in the first 15 - 30 minutes, which is then continuously compared to their current driving style. Up to 70 parameters are taken into account, such as time of day, length of trip, speed, steering motion, use of buttons on the multifunctional display or steering wheel, etc.

Attention Assist is active at speeds between 40 mph (65 km/h) and the maximum speed. The driver can set the assistance system to 'standard', 'sensitive' or "off". When the system begins to recognize signs of fatigue, decreasing attention levels or variations from the individual driver profile, it will display a warning message "Pause!" along with a coffee-cup symbol and an acoustic signal. In addition, if the vehicle has a navigation system, it suggests nearby rest areas.

If the driver does not take a break and ATTENTION ASSIST continues to register decreasing attention levels, the system displays another warning after 15 minutes.

The high-end instrument cluster displays the assistance graphic with 5 segment bar and a picture of a coffee cup in its center. The circle shrinks with decreasing attention levels. In addition, the travel time since the last break is displayed.

Attention Assist may only partially function among other things when:

- The trip takes less than 30 minutes
- The road conditions are bad, e.g. rough roads, potholes
- There is strong crosswind
- The vehicle is driven in a racy manner, e.g. with high curve speed and rapid acceleration
- The speed is less than 40 mph (65 km/h) for most of the trip
- The clock is set incorrect

K51	Misfiling prevention for diesel	Compared to Sprinter 906		
		Carry Over	Advanced	New

The protection system is designed for diesel models and includes a locking device with two levers that is made in such a way that it can only be unlocked by a standardized diesel pump nozzle. This prevents the tank from inadvertently being filled with gas. The diameter of the standardized gas pump nozzle (0.83" (21 mm)) is smaller than the diesel analogue (0.94" (24 mm)) and therefore too small to unlock the mechanism.

Note: It is the responsibility of the customer to ensure they are filling with the appropriate fuel as there may be instances where a nozzle capable of unlocking the mechanism is utilized on a gas pump.

K52	Def fluid filler cap - lockable	Compared to Sprinter 906		
		Carry Over	Advanced	New

This code includes a blue filler cap for the DEF tank and a plastic key element for diesel engines. To lock or unlock the filler cap the dust protection must be turned to the side and the key element needs to be inserted. This makes it possible to turn and remove the DEF filler cap. After the DEF tank has been filled and closed, the key element can be removed. The key element is with the tool kit enclosed in the storage compartment on the passenger's foot well.

K56	Red diesel filler cap	Compared to Sprinter 906		
		Carry Over	Advanced	New

Instead of the standard black filler cap a red filler cap clearly labelled 'DIESEL' is mounted. The red color serves as an optical warning for the customer when refueling. This should prevent the customer from using the wrong type of fuel and having to pay for repairs.

K60	Exhaust straight to rear	Compared to Sprinter 906		
		Carry Over	Advanced	New

The vehicles come with a straight exhaust up to the rear as standard via code K60. The exhaust ends shortly before the rear of the vehicle and prevent unpleasant odors in areas of boarding and alighting.

Benefits:

- Rear-exiting exhaust
- Recommended for vehicles used in applications such as passenger transport and distribution work

KB7	24.5 gallon fuel tank	Compared to Sprinter 906		
		Carry Over	Advanced	New

Diesel engines get a 24.5 gallon (93 litres) fuel tank fitted underneath the left vehicles side. The fuel filler is integrated in the left b-pillar nearly the driver´s door.

KL1	Aux fuel sending unit w/ fuel tap	Compared to Sprinter 906		
		Carry Over	Advanced	New

The fuel gauge sensor is fitted with an additional fuel connection to facilitate retrofitting of a fuel-powered auxiliary heater and similar smaller consumers. The fuel tank can be consumed down to approximately five gallons. A "pig tail" (see picture) is located next to the fuel filler pipe and can be easily accessed from the driver side.

Benefits:
Simplified retrofitting of smaller auxiliary consumers.

KL5	Fuel filter with water separator	Compared to Sprinter 906		
		Carry Over	Advanced	New

On vehicles with diesel engines, a water separator and a sensor are fitted to the fuel filter. The water separator absorbs the water contained in diesel fuel with higher water content. A control lamp indicates that the water separator is full. For servicing and cleaning, see the latest Sprinter operator’s manual.

Benefits:
Enhanced reliability when using poor-quality fuel. Enhanced engine reliability when using diesel fuel with a high water content

L13	Fog lamp with cornering light function	Compared to Sprinter 906		
		Carry Over	Advanced	New

The halogen front fog lamps are integrated into the front bumper and support a cornering light function whereby one of the two front fog lamps switches on automatically when the driver activates a direction indicator or turns the steering wheel. The cornering light dims on at speeds up to 25 mph (40 km/h). A curve light function dims on at speeds up to 43 mph (70 km/h). The fog lamps can be switched on/off with a button at the light switch positioned on the

left of the steering wheel.

L1D	Overhead control panel w/bus interior lighting control	Compared to Sprinter 906		
		Carry Over	Advanced	New

The Overhead Control Panel with interior lighting control, Code L1D, is comparable to the Comfort overhead control panel but includes an additional button to operate a retrofitted interior lighting for buses. The interior lighting in the rear is dimmed when activated.

If one of the lights is switched on manually via a button in the overhead control panel, it switches off automatically after approx. 20 minutes.

L22	LED tail lights	Compared to Sprinter 906		
		Carry Over	Advanced	New

Apart from giving the vehicle front a high-quality look, the LED high-performance headlamps illuminate the lane evenly both with standard driving light and full beam. The LED technology produces a pleasantly soft light. Due to the quantity of light sources, the light distribution is more homogenous compared to the halogen headlamps. An additional advantage is the low direct glare for oncoming traffic and other road users. The LED lights also have a long lifespan and consume a reduced amount of electricity.

The code L22, includes the following functions in LED technology for the cargo/passenger van:

- Rear lights
- Brake lights

The remaining functions employ conventional light bulbs:

- Rear fog lamp (always on left side)
- Reverse lights
- Indicators

Note: For cab chassis, the code L22 includes all tail light functions in LED technology

L44	Flashing lights, front left	Compared to Sprinter 906		
		Carry Over	Advanced	New

The direction indicators are mounted on the left and right front fender instead of on the outside mirrors.

L49	Identification Lamps	Compared to Sprinter 906		
		Carry Over	Advanced	New

Vehicle marker and clearance lamps are required by law on all vehicles with a total width of 80" (203 cm) and above according to FMVSS standards. The five identification lamps are mounted in the area of the windshield at the vehicle roof. The two outer ones are used as clearance lamps and the three inner ones are identification lamps. The preparation clearance lights includes the wiring harness (tied in the roof) and allows an easier installation of the lights on the roof.

Note: It is the upfitter's responsibility to order these lamps to meet FMVSS guidelines.

L65	Interior lights, cargo compartment	Compared to Sprinter 906		
		Carry Over	Advanced	New

Two additional ceiling lights are fitted at the roof frame on the side wall. A door contact switch turns the lights on/off when the load compartment doors are opened/closed. The lights can also be switched on/off by the switch in the overhead control panel. In combination with code LC2, all standard ceiling lights in the load compartment come are LED.

Benefits:

Better visibility when loading/unloading the vehicle during darkness.

L71	Light/motion sensor in rear compartment	Compared to Sprinter 906		
		Carry Over	Advanced	New

A motion sensor is installed at the center of the roof cross bow towards the sliding doors. The sensor activates the load compartment lighting if motion is detected when the vehicle is stationary and the vehicle has not been locked. The lighting will switch on for approximately two minutes. If no change to the vehicle is detected over several minutes, the motion sensor will automatically switch off. This prevents the battery from discharging. In combination with code LC2 all ceiling lights in the load compartment come as LED variants.

Benefits:

Automatic load compartment illumination. As soon as the driver/co-driver moves from the cab into the rear section, the lighting is automatically activated to provide improved illumination. Prevention of battery discharging.

L72	Electrical pre-installation for load compartment lighting	Compared to Sprinter 906		
		Carry Over	Advanced	New

The electrics for body interior lighting include the wiring harness with a 3-pin connecting point in the driver’s seat frame and allows upfitters to fit load compartment lighting quickly and easily. The operation of the light can be done with a switch in the overhead control panel.

Benefits:

Simplifies retrofitting of load compartment lighting. Allows upfitters to install cargo compartment lights quickly and easily. Available for cab chassis

L76	Wire harness tail lamp w/ extended wiring	Compared to Sprinter 906		
		Carry Over	Advanced	New

The wiring harness of both tail lights are approx. 78.7” (200 cm) longer than the standard one. They are rolled up and provisionally fastened at the rear frame end and allows upfitters to fit taillights easier in a different position.

Benefits:

Makes it easy to fit the taillights in a different position. The extended tail light line serves as a pre-installation, e.g., for body manufacturers who wish to fit the taillights in a different position.

L77	Wiring for additional turn signals	Compared to Sprinter 906		
		Carry Over	Advanced	New

The wiring harness can be find at the rear frame end and allows upfitters to fit easier additional turn signal indicators e.g. at the mounted body.

Benefits:

Easier fitting of additional turn signal indicators.

L90	Tail lamp deletion, non-LED	Compared to Sprinter 906		
		Carry Over	Advanced	New

The vehicle is supplied without taillights at the rear of the vehicle but with relevant connections and wiring. This allows upfitters to fit alternative non-LED lights. The wiring harness is tied in the rear area.

Upfitters can fit aftermarket lamps:

- License plate light: 1.0 A
- Backup light: 2.4 A
- Turn signal: 1.75 A -1.96 A (maximum 2.1 A)

- Fog light: N/A (tape back)
- Tail light: 1.0 A

Please consult the Mercedes Body and Equipment guidelines for further information available via www.upfitterportal.com.

Benefits:

Pre-installation for alternative rear lights. Allows upfitters to fit alternative lights and turn signals at the rear of the vehicle.

L91	Tail lamp deletion, LED	Compared to Sprinter 906		
		Carry Over	Advanced	New

The vehicle is supplied without taillights at the rear of the vehicle but with relevant connections and wiring. This allows upfitters to fit alternative LED lights. The wiring harness is tied in the rear area.

Upfitters can fit aftermarket lamps:

- License plate light: 1.0 A
- Backup light: 2.4 A
- Turn signal: 1.75 A -1.96 A (maximum 2.1 A)
- Fog light: N/A (tape back)
- Tail light: 1.0 A

When using LEDs, a resistor must be used to compensate for the lower amp draw. Turn signal LEDs amp draw is recommended to be between 1.75 A – 1.96 A (maximum 2.1 A) otherwise rapid flashing will occur. Please consult the Mercedes Body and Equipment guidelines for further information available via www.upfitterportal.com.

Benefits:

Pre-installation for alternative rear lights. Allows upfitters to fit alternative lights and turn signals at the rear of the vehicle.

L94	Parking lights deletion	Compared to Sprinter 906		
		Carry Over	Advanced	New

The parking lights function is deactivated. These vehicles must be parked with the sidelights on instead.

LA1	High beam assist	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code LA1, High beam Assist is based on a camera on the inside of the front windscreen which monitors the traffic situation in front of the vehicle. The camera identifies other vehicles and calculates their distances. When the system calculates that the road ahead is clear, high beam is activated automatically. The High Beam Assist is available at speeds of > 18 mph (30 km/h) and over. Once it has been switched on, it operates fully automatically. The High beam

Assist is only active (so long not deactivated permanently) when the light switch is in the position "AUTO" and the high beam lever is in the position "ON". The activation of the system will be shown in the instrument cluster. This Assist can be deactivated permanently in the instrument cluster.

Components of High beam Assist:

- Camera on the inside of the windshield
- Electronic control unit
- Image-processing software

Benefits:

- Ideal illumination of the road at all times without blinding oncoming traffic
- Automatic adjustment (on/off) for enhanced comfort
- This assist can be deactivated permanently in the instrument cluster or with the optional multifunction steering wheel, code C6L

LA2	Headlight assistant	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code LA2, Headlight assistant, monitors the brightness of weather and lighting conditions during driving operation and switches the lights on or off as required. The light switch must be in the "AUTO" position for automatic on/off driving lights. In conditions of changing brightness, e.g. when driving through tunnels, the assistance system can improve driving safety by switching on the lights. The light sensor is located centrally on the windscreen. When the brightness is dropped below a defined value, the system automatically switches on the driving lights. If the measured value increases to the defined level, the driving lights switch off again.

LA3	Light sensor for vehicles with alcove	Compared to Sprinter 906		
		Carry Over	Advanced	New

LA3 is a relocated light sensor at the lower end of the windshield for vehicles with an alcove. The standard light sensor LA2 is located at the top of the windshield and could be covered by the shade

of the alcove. Please refer to the Mercedes-Benz Body and Equipment Guidelines on www.upfitterportal.com for more information and criteria.

LB5	3rd Brake Light	Compared to Sprinter 906		
		Carry Over	Advanced	New

An additional LED brake light is fitted at the rear edge of the cargo van or passenger roof. The third brake light does not affect the height of the vehicle at the rear.

Benefits:

Enhanced active safety. The LED-based brake light responds more quickly and is visible from afar. Particularly in bad weather, the better visibility provides enhanced safety without affecting vehicle functionality. Standard on Cargo, Crew and Passenger Vans.

LB9	Illuminated front exits	Compared to Sprinter 906		
		Carry Over	Advanced	New

The exit lights are integrated in the driver's and passenger's door and in each step trim of the sliding door. The exit lights of the step trim come as LED variants and the lights of the doors come as conventional bulbs. As the doors swing open, the exit lights illuminate the ground for safe boarding and alighting.

Benefits:

Improves safety when getting in and out of the vehicle. As the doors opens, the exit lights turn on automatically.

LC2	Led light strip in load compartment	Compared to Sprinter 906		
		Carry Over	Advanced	New

In addition to the standard interior lighting, two LED lights approximately 30" (762 mm) long (3000 K, warm white, approx. 20 Lux; luminous flux: approx. 400 Lumen) are included. These are located in the center of the entry area and on the back roof bow of the load compartment. The lights can be switched on and off either using the interior-light switch by the rear door via the door contact switch or via an overhead control panel with switch for interior lighting in the rear.

LC4	Comfort overhead control panel	Compared to Sprinter 906		
		Carry Over	Advanced	New

The comfort overhead control panel comes with an LED strip replacing the conventional halogen light. The panel allows for the driver and co-driver to manage all settings for interior lighting such as:

- Manually switching them on/off (if required).
- Switches for reading lights for driver and co-driver.
- A switch for deactivating the 'door contact' function.
- A control switch for the interior lighting in the front.
- A button for switching the interior lights in the load/passenger compartment on and off.
- A storage compartment for glasses.

It also holds the buttons for code EY6, Accident and breakdown Management and code EY5, emergency call system. When also choosing the optionally available Code FY1, the required buttons are also included in the comfort overhead control panel.

LG7	Led high performance headlamps	Compared to Sprinter 906		
		Carry Over	Advanced	New

LED High performance headlamps give the vehicle front a high-quality look, the headlamps illuminate the lane evenly both with standard driving light and full beam. The LED technology produces a pleasant soft light from the quantity of light sources, additionally the light distribution is more homogenous compared to the halogen headlamps. Another benefit is the low direct glare for oncoming traffic and other road users. The LED lights also have a long lifespan and consume little power.

LV6	Third brake light pre-wiring	Compared to Sprinter 906		
		Carry Over	Advanced	New

This pre installation includes the wiring to allow the quick and easy fitting of a 3rd brake light. The wiring is tied in the driver's seat base.

Benefits:

Easy connection of the third brake light by an upfitter.

LV7	Clearance lights pre-wiring	Compared to Sprinter 906		
		Carry Over	Advanced	New

The preparation clearance lights includes the wiring harness (tied in the roof) and allows an easier installation of the lights on the roof.

Benefits:

Allows identification and clearance lights to be retrofitted easily.

M20	Speed limitation 65 mph	Compared to Sprinter 906		
		Carry Over	Advanced	New

The top speed is limited to 65 mph (105 km/h) via the engine control unit.

Benefits:

For vehicles where speed limitation is desired or is necessary for technical reasons.

M24	Starter upgraded	Compared to Sprinter 906		
		Carry Over	Advanced	New

The reinforced starter is designed for significantly more starts of the engine, and is particularly suitable for customers driving mainly short distances, with a frequent stop, and go driving profile.

M46	Alternator 14 V / 220 A	Compared to Sprinter 906		
		Carry Over	Advanced	New

Standard high-capacity 14 V/220 A alternator. This alternator is automatically specified in conjunction with the six-cylinder engine (OM642).

Benefits:

- Improves battery charging in short-distance operation
- Enhances electrical system performance

The higher-capacity alternator enhances the performance of the electrical system in vehicles such as ambulances or fire-fighting vehicles. It meets the power requirements of high-consumption electrical auxiliaries such as tailgate lifts. It also ensures rapid battery charging in the case of frequent short distance operation and operation in cold temperatures.

M60	Alternator 14 V / 250 A	Compared to Sprinter 906		
		Carry Over	Advanced	New

A high-output alternator rated at 14 V/250 A is fitted instead of the standard alternator, and only in conjunction with code M47, alternator for fuel economy.

Benefits:

- Improves efficiency
- Increases output

- Reduces noise

The more powerful alternator increases the performance of the electrical system. It ensures that the increased power requirements of additional electrical equipment are met. It also ensures fast battery charging in vehicles frequently used on short-distance trips and at low temperatures.

MD3	Top speed limitation 75 mph	Compared to Sprinter 906		
		Carry Over	Advanced	New

The top speed is limited to 75 mph (120 km/h) via the engine control unit.

Benefits:

For vehicles for which speed limitation is desired or is mandatory for technical reasons (e.g., haulage vehicles, special-purpose vehicles).

MG3	2.0L I4 turbo diesel with 7-speed transmission	Compared to Sprinter 906		
		Carry Over	Advanced	New

Four-cylinder OM 651 diesel engine with fourth-generation common rail technology generates a rail pressure of 1800 bar (26,100 psi) in the high-pressure reservoir. The maximum ignition pressure in the cylinders is 200 bar (2,900 psi). The two-stage turbocharger comprises a high-pressure and a low-pressure exhaust gas turbocharger. The fuel is injected directly into the combustion chamber with the aid of solenoid valves. The engine comes with a rear-mounted camshaft drive and two-mass flywheel to isolate the crankshaft's vibration stimuli from the drive system. Two balancer shafts with counterweights ensure that the centers of gravity of the pistons and counterweights move in parallel to the cylinders' axes, thereby maintaining the common center of gravity in approximately the same place (Lanchester balancer). In addition, the oil injection nozzles and the water pump are activated on demand.

TECHNICAL DATA

- Configuration: DOHC
- No. of cylinders/arrangement: I4
- Valves: 4 (2 in/2 out)
- Bore/stroke: 83.0 mm/99.0 mm
- Cubic capacity: 2143 cc
- Output: 161 hp (120 kW) at 3800 rpm
- Max. torque: 266 lb.-ft. (360 Nm) at 1400-2400 rpm
- Compression ratio 16.2:1
- Injection system: Common-rail direct injection (CDI)

Benefits compared to previous generation engines:

- High flexibility
- High torque
- Powerful acceleration
- Optimized fuel consumption

- Low noise

Emission standard for diesel engines

The diesel engine follows the emissions values of the ULEV (< 10.000 lbs.) or SULEV (> 10.000 lbs.) exhaust emissions standard with active nitrogen oxide reduction which means that a SCR – system (**S**elective **C**atalytic **R**eduction) is used. Accordingly DEF (**D**iesel **E**xhaust **F**luid) is needed.

The task of the exhaust treatment is to reduce the exhaust emissions:

- Nitrous oxide (NOX) • Hydrocarbons (HC) • Carbon monoxide (CO) • Soot particle

The exhaust gases expelled from the engine are cleaned in an oxidation catalytic converter, a diesel particulate filter (DPF) and a reduction catalytic converter (**S**elective **C**atalytic **R**eduction (SCR).

The DEF (**D**iesel **E**xhaust **F**luid) reducing agent is injected upstream of the SCR catalytic converter, and is converted to ammonia (NH3) by thermal decomposition (heat-induced chemical reaction) and hydrolysis (water-induced chemical reaction). In the SCR catalytic converter, the NOX contained in the exhaust gas is converted with the NH3 to nitrogen (N2) and H2O molecules.

All vehicles with diesel engine get the DEF-Tank incl. filler with blue cap mounted on the right side in the engine compartment. The maximum filling capacity of DEF (**D**iesel **E**xhaust **F**luid) is 22 l. The current filling level is shown in the instrument cluster.

Noise, exhaust emissions and fuel consumption are optimized by multi-stage injection and a turbo-charger. Optimization of the engine control unit and the use of a diesel particulate filter with DEF (Diesel Emission Fluid) enable this engine to meet the stringent exhaust emission limits of EPA 2013 standard and is 50 states certified. High torque output already at very low rpm (1400 to 2400 rpm).

Note: Biodiesel B5 only.

MG5	3.0L V6 turbo diesel with 7-Speed Transmission	Compared to Sprinter 906	
		Carry Over	New

OM 642 six-cylinder diesel engine with common-rail direct injection (CDI) and fuel preheating.

An intake-metered high-pressure pump sends fuel to the high-pressure accumulator (fuel rail), where pressures of up to 1600 bar (23,200 psi) is developed. The electrically controlled injectors inject the fuel directly into the combustion chamber. Thanks to the very high injection pressures, this system ensures excellent mixture formation. The electronic management allows good adaptation of injection timing and quantity to operating and driving conditions.

TECHNICAL DATA

- Configuration: DOHC
- No. of cylinders/arrangement: V6 72°
- Valves: 4 (2 in/2 out)
- Bore/stroke: 83.0 mm/92.0 mm
- Cubic capacity: 2987 cc
- Output: 188 hp (140 kW) at 3800 rpm

- Max. torque: 325 lb.-ft. (440 Nm) at 1400-2400 rpm
- Compression ratio 18.0:1
- Injection system: Common-rail direct injection (CDI)

Benefits:

- High flexibility
- High torque
- Powerful acceleration
- Optimized fuel consumption
- Meets EPA 2013 emission standard
- Low noise

Emission standard for diesel engines

The diesel engine follows the emissions values of the ULEV (< 10.000 lbs.) or SULEV (> 10.000 lbs.) exhaust emissions standard with active nitrogen oxide reduction which means that a SCR – system (**S**elective **C**atalytic **R**eduction) is used. Accordingly DEF (**D**iesel **E**xhaust **F**luid) is needed.

The task of the exhaust treatment is to reduce the exhaust emissions:

- Nitrous oxide (NOX) • Hydrocarbons (HC) • Carbon monoxide (CO) • Soot particle

The exhaust gases expelled from the engine are cleaned in an oxidation catalytic converter, a diesel particulate filter (DPF) and a reduction catalytic converter (**S**elective **C**atalytic **R**eduction (SCR).

The DEF (**D**iesel **E**xhaust **F**luid) reducing agent is injected upstream of the SCR catalytic converter, and is converted to ammonia (NH3) by thermal decomposition (heat-induced chemical reaction) and hydrolysis (water-induced chemical reaction). In the SCR catalytic converter, the NOX contained in the exhaust gas is converted with the NH3 to nitrogen (N2) and H2O molecules.

All vehicles with diesel engine get the DEF-Tank incl. filler with blue cap mounted on the right side in the engine compartment. The maximum filling capacity of DEF (**D**iesel **E**xhaust **F**luid) is 22 l. The current filling level is shown in the instrument cluster.

Noise, exhaust emissions and fuel consumption are optimized by multi-stage injection and a turbo-charger. Optimization of the engine control unit and the use of a diesel particulate filter with DEF (Diesel Emission Fluid) enable this engine to meet the stringent exhaust emission limits of EPA 2013 standard and is 50 states certified. High torque output already at very low rpm (1400 to 2400 rpm).

Note: Biodiesel B5 only.

MH8	SULEV Emissions	Compared to Sprinter 906	
		Carry Over	Advanced

According to the CARB emission legislation, the Sprinter is categorized as a Medium Duty Vehicle (MDV). The future CARB LEV VIII SULEV emission standards of MDVs are to be phased in from 2018 to 2022. From 2023 onward the SULEV limits will be mandatory for all newly introduced MDV vehicles.

With this code, the Sprinter is programmed with an improved combustion, emission and OBD calibration to meet the higher requirements of LEVIII SULEV.

Standard on all Gas models and 3500XD and 4500 Diesel models.

M10	ULEV Emission	Compared to Sprinter 906		
		Carry Over	Advanced	New

According to the CARB emission legislation, the Sprinter is categorized as a Medium Duty Vehicle (MDV). ULEV is standard for all Diesel models below 10,000 lbs. (4535kg) (2500 and 3500 models).

MM3	2.0L 4-cylinder turbo gasoline with 9-Speed Transmission	Compared to Sprinter 906		
		Carry Over	Advanced	New

The engine M274 is a 4-cylinder gas engine with an aluminum alloy crank case, direct injection and fast-acting piezo-injectors for multiple injection, needs-orientated multi spark ignition, controlled oil pump, switchable water pump and high compression one-stage turbocharging. Common features are the use of state-of-the art technologies for maximum efficiency, very smooth running, high tractive power right from low revs, sustainability in terms of impending emissions standards and low weight.

TECHNICAL DATA

- Configuration: DOHC
- No. of cylinders/arrangement: 4/in-line
- Valves: 4 (2 in/2 out)
- Bore/stroke: 83.0 mm/92.0 mm
- Cubic capacity: 1991 cc
- Output: 188 hp (140 kW) at 5000 rpm
- Max. torque: 258 lb.-ft. (350 Nm) at 2500-3500 rpm
- Compression ratio 9.8:1
- Injection system: Bosch injection (200bar)

Benefits:

- High flexibility
- High torque
- Low emissions
- Optimized fuel consumption
- Powerful acceleration
- Low noise and vibration levels

Direct inject

A high-pressure pump with integrated flow control valve is used to generate the required high pressure. The fuel is conducted via a high-pressure rail to the centrally located fuel injectors to inject up to five very precise injections per cycle into the combustion chamber. The injectors operate extremely fast and can inject even the smallest amounts of fuel. Due to the high fuel pressure the outwards opening nozzle develops a stable hollow-cone beam under all operating conditions.

Emission standard for gas engines

The M274 fulfills the emissions values of the SULEV exhaust emissions standard with a direct injection homogeneous mode. In homogeneous mode a combustible fuel/air mixture is generated within the whole combustion chamber. There are no further measures required for exhaust after treatment since normal three-way catalytic converter adequately converts the pollutants.

The task of the exhaust treatment is to reduce the exhaust emissions:

- Nitrous oxide (NOX)
- Hydrocarbons (HC)
- Carbon monoxide (CO)

MS1	Cruise control	Compared to Sprinter 906		
		Carry Over	Advanced	New

The cruise control accelerates and brakes the vehicle automatically in order to maintain a previously stored speed above 15 mph (24 km/h). The cruise control is operated using the left steering wheel buttons. A limiter function is not available. If the cruise control is activated and the optimal available Traffic Sign Assist has detected a speed restriction sign, the maximum permissible speed displayed in the instrument display can be stored

and the vehicles maintains or does not exceed this speed.

Benefits:

- Constant speeds result in fuel-efficient driving
- Easier compliance with speed limits

N62	Front engine bracket for additional alternator	Compared to Sprinter 906		
		Carry Over	Advanced	New

It is possible to attach an additional auxiliary alternator on the right side of the engine next to the oil pan, but this must be done using the factory option N62 as the bracket.

Maximum weight of device on bracket: 16 lbs. (7.25 kg)

Maximum power output of alternator: max. 8.5 kW

It is the upfitters responsibility to choose the correct belt length and to ensure the correct belt layout and belt durability. Alternator is customer supplied.

Brackets will differ depending on which engine is ordered with the vehicle. For more information, please refer to the Mercedes-Benz Body and Equipment guidelines available on www.upfitterportal.com.

N63	Front engine bracket for auxiliary A/C compressor	Compared to Sprinter 906		
		Carry Over	Advanced	New

It is possible to attach an additional auxiliary alternator on the right side of the engine next to the oil pan, but this must be done using the factory option N63 as the bracket.

Maximum weight of device on bracket: 16 lbs. (7.25 kg)
Maximum power output of alternator: max. 8.5 kW

It is the upfitters responsibility to choose the correct belt length and to ensure the correct belt layout and belt durability. Alternator is customer supplied.

Brackets will differ depending on which engine is ordered with the vehicle. For more information, please refer to the Mercedes-Benz Body and Equipment guidelines available on www.upfitterportal.com.

P08	Cover for transport	Compared to Sprinter 906		
		Carry Over	Advanced	New

Cab chassis base versions (F28, F50) are supplied with a cover for transport. In case of vehicles specified with deletion of windows for bus version (code W94), code P08 includes polypropylene (PP) con-pearl plastic panels to close the resulting cutouts.

Benefits:
Weatherproof transport protection.

P47	Front mudflaps	Compared to Sprinter 906		
		Carry Over	Advanced	New

Plastic mud flaps are fitted to the wings behind the front wheels.

Benefits:
Reduces dirt accumulation on the vehicle. The mud flaps reduce spray in the wet and help to keep the body and sides clean. Standard on all Sprinters.

P48	Rear mud flaps	Compared to Sprinter 906		
		Carry Over	Advanced	New

Plastic mud flaps are fitted behind the rear wheels.

Benefits:

- Reduces dirt accumulation on the vehicle
- Improves visibility for traffic behind

The mud flaps reduce spray in the wet, thereby reducing dirt accumulation on the body and improving visibility for traffic behind. Standard on all Sprinter models.

P93	Omission of D-rings	Compared to Sprinter 906		
		Carry Over	Advanced	New

Depending on the vehicles wheelbase the lashing eyelets are installed as follows:

- 144" wheelbase: 10 lashing eyelets
- 170" wheelbase: 12 lashing eyelets
- 170"EXT wheelbase: 14 lashing eyelets

Two lashing eyelets are always at the partition wall and the rest in the load compartments floor. The lashing eyelets keep the wooden/plastic floor (if ordered) in position. Omission means that the lashing eyelets in the load compartments floor are not installed and the openings are with plastic covers closed.

Q11	Longitudinal member reinforcement	Compared to Sprinter 906		
		Carry Over	Advanced	New

Reinforcements are welded to both rear left and right longitudinal members where these inserts serve an additional base for different options, such as trailer couplings, steps and cross members.

Q18	End Cross Member Bolted	Compared to Sprinter 906		
		Carry Over	Advanced	New

The end cross member is bolted to the side members.

Benefits:

Allows easy retrofitting of bodies and attachments. Allows the end cross member to be easily removed if necessary to make room for fitting box bodies, aerial platforms, etc.

Q24	Trailer Hitch, 5,000 lbs.	Compared to Sprinter 906		
		Carry Over	Advanced	New

The trailer cross-member code Q24 has a towing capacity of 5,000 lbs. (2,268 kg) and a maximum trailer load of 500 lbs. (227 kg). A trailer plug socket with 7-poles and a trailer connection unit, which also supports LED lights on a trailer, is included with the code E40. A permanent power supply is on the trailer socket pin 4 and allows a connection to accessories up to a maximum of 240 W. Do not use the power supply to charge the trailer battery. Charging the trailer battery using the power supply of the vehicle can damage the battery.

Benefits:

This trailer hitch enables a conventional trailer coupling to be fitted, and also allows the connection of a power supply for the trailer.

Note: Customers need to make sure that they do not exceed the GCWR (see operators manual or identification plate on seat base).

Q67	Tow hook rear	Compared to Sprinter 906		
		Carry Over	Advanced	New

The towing eye is permanently attached to the vehicle on the right of the rear longitudinal member and can be used to tow away vehicles. Please note: when a towing eye is used to recover a vehicle, the vehicle may be damaged in the process.

Q72	Deletion of end cross member	Compared to Sprinter 906		
		Carry Over	Advanced	New

The rear end cross member is not fitted. Four weld nuts are fitted at the mounting plate corners.

Benefits:

Easier mounting of upfits on the end of the chassis.

QA2	Trailer cross member 7,500 lbs capacity	Compared to Sprinter 906		
		Carry Over	Advanced	New

The option code QA2 offers a towing capacity of 7,500 lbs. (3402 kg) and a maximum trailer load of 750 lbs. (340 kg). Customers need to make sure that they do not exceed the GCWR (see operators manual or identification plate on seat base).

QA9	Half-sided step rear (for trailer hitch)	Compared to Sprinter 906		
		Carry Over	Advanced	New

In conjunction with a trailer hitch Q24/QA2, it is possible to order a black painted step (7.48 x 20.47" (190 x 520 mm)) consisting of a tubular steel frame with a welded anti-slip tread surface. The step is bolted onto the right side of the trailer coupling and allows an easier entry and exit at the rear.

R60	Provisional spare wheel bracket frame mounted	Compared to Sprinter 906		
		Carry Over	Advanced	New

All vehicles come with the spare wheel bracket mounted under the end of the frame which allows to carry a full-sized spare wheel (except the super single). For cab chassis where the area of the rear frame end is used for custom upfits, the spare wheel can be provisionally mounted on the frame via code R60. In this case the spare tire must subsequently be relocated to another position in or on the vehicle.

Benefits:

For transport purposes. This provisional arrangement is used exclusively for transporting vehicles to Mercedes-Benz sales outlets, dealers or body manufacturers. The spare wheel must subsequently be relocated to another position in or on the vehicle.

R65	Spare wheel bracket below frame	Compared to Sprinter 906		
		Carry Over	Advanced	New

The spare wheel bracket is mounted under the end of the frame behind the rear axle.

Benefits:

Allows a spare wheel to be carried without restricting the load compartment.

R87	Spare wheel	Compared to Sprinter 906		
		Carry Over	Advanced	New

All vehicles, except the super-single, come with an equipped full size spare wheel. Vehicles equipped with alloy wheels also have the spare tire equipped with an alloy wheel. For vehicles with super single tires: the spare wheel needs to be mounted at the rear axle and it is mandatory to fix the adapter before the use of the spare wheel. On the front axle, the spare wheel has to be mounted without the adapter. The super-single spare wheel comes in the dimension 225/75 R16 with a one-time use at the rear axle and reduced maximum allowed velocity of 34 mph (55 km/h).

Benefits:

Allows a wheel to be changed in the event of a tire puncture.

R91	Spare wheel deletion	Compared to Sprinter 906		
		Carry Over	Advanced	New

All vehicles, except the super-single, are equipped with an appropriately sized spare wheel. Optionally it's possible to delete the spare wheel via code R91.

R92	Spare tire carrier deletion	Compared to Sprinter 906		
		Carry Over	Advanced	New

All vehicles comes with the spare tire bracket mounted under the end of the frame which allows a full-sized spare tire (except the super single). Optionally it's possible to delete the spare tire bracket via code R92. For cab chassis, where the area of the rear frame end is used for custom upfits, the spare tire must subsequently be relocated to another position in or on the vehicle.

R98	Rims painted jet black	Compared to Sprinter 906		
		Carry Over	Advanced	New

The vehicle is fitted with jet black (MB 9040) painted wheels.

R9A	285/65 R 16 C Super-Single-Tires	Compared to Sprinter 906		
		Carry Over	Advanced	New

The super-single variant is available for the cargo van or cab chassis and includes steel wheel rims (8,5J x 16) at the rear axle with 285/65 R16 C tires. Steel wheel rims (6,5J x 16) and 225/75 R16 C tires come for the front axle and the spare tire. All wheels are mounted with spherical seat bolts. As a standard, these are all-season tires and optionally winter tires are available. The super-single variant for the cargo van offers an increased load width between the wheel housing of up to approx. 48,35" (122.8 cm) (dual tires approx. 38,19" (97 cm)). The vehicle height raises approx. 1" (2.54 cm). The cab chassis comes with more available space between the wheel housing for custom bodies.

RD9	Unspecified tire brand	Compared to Sprinter 906		
		Carry Over	Advanced	New

With RD9, any available tire brand will be added to the order. If a specific brand is required, please add RM9 and the wished brand. For possible combinations and availability, please see the tire section of the DOG.

RF1	Tire brand Continental	Compared to Sprinter 906		
		Carry Over	Advanced	New

Please see the tire section in the DOG for an overview of the tire options.

RF8	Tire brand Michelin	Compared to Sprinter 906		
		Carry Over	Advanced	New

Please see the tire section in the DOG for an overview of the tire options.

RH0	Tire brand Kumho	Compared to Sprinter 906		
		Carry Over	Advanced	New

Please see the tire section in the DOG for an overview of the tire options.

RH7	Tires LT 215/85 R16	Compared to Sprinter 906		
		Carry Over	Advanced	New

Vehicles are equipped with tire size 215/85 R16, which can be selected with different tire options as below:

- Continental Tire (Code RF1)
- Michelin Tire (Code RF8)
- All Season Tire (Code RM0)

- Mud+Snow (Code RM1)
- Unspecified brand (Code RD9) which is standard on all models.

Please see the tire section of the DOG for the available combinations.

RH8	Tires LT 245/75 R16	Compared to Sprinter 906		
		Carry Over	Advanced	New

Vehicles are equipped with tire size 245/75 R16 which can be selected with different tire options as below:

- Continental Tire (Code RF1)
- Michelin Tire (Code RF8)
- Kumho Tire (Code RH0)
- Mud+Snow Tire (Code RM1)
- Unspecified brand (Code RD9) which is standard on all models

Please see the tire section in the DOG for available combinations.

RL5	Light alloy wheels 6.5 J x 16	Compared to Sprinter 906		
		Carry Over	Advanced	New

Installation of four 6.5 J x 16 light-alloy wheels with longer wheel bolts (73 mm) for 235/65 R 16 C tires.

Benefits:

Enhances the look of the vehicle. The light-alloy wheels enhance the appearance of the vehicle.

RM0	All-Season tires	Compared to Sprinter 906		
		Carry Over	Advanced	New

The compound used in the all-season tires ensures that they do not harden too much in low temperatures and at the same time retain their stiffness in summer temperatures.

Benefits:

No change in tires needed due to seasonal weather. All-season tires are standard equipment. For Winter Tire see RM1.

RM1	M+S Winter tires	Compared to Sprinter 906		
		Carry Over	Advanced	New

The Mud and Snow tires feature a compound and tread design, which ensures good traction and lateral stability in the cold, snow and slush, as well as in similar adverse road conditions.

Benefits:

- Safer driving and better traction on wintry roads
- Improves climbing ability since more grip

RM2	Rims painted Arctic White	Compared to Sprinter 906		
		Carry Over	Advanced	New

The vehicle is equipped with steel wheels painted arctic white (MB 9147).

Benefits:
Requirement from various fleet customers.

RM9	Specially requested tires	Compared to Sprinter 906		
		Carry Over	Advanced	New

RM9 must be added when choosing any specific tire brand.

RS3	6.5 J x 16 Steel Wheels	Compared to Sprinter 906		
		Carry Over	Advanced	New

Please see the tire section in the DOG for an overview of the tire options.

RS5	Steel Wheels: 8.5Jx16 Rr; 6.5Jx16 Fr	Compared to Sprinter 906		
		Carry Over	Advanced	New

Please see the tire section in the DOG for an overview of the tire options.

RS6	5.5 J x 16 Steel Wheels	Compared to Sprinter 906		
		Carry Over	Advanced	New

Please see the tire section in the DOG for an overview of the tire options.

RY2	Tire pressure monitoring lamp	Compared to Sprinter 906		
		Carry Over	Advanced	New

With the help of sensors on the inside of the tires it can monitor pressure and report if the pressure is low on one or more tires. The tire pressure will be displayed after few minutes of driving in the multifunction display. If there is a substantial loss of tire pressure, a warning is issued via a display message and a warning lamp in the instrument cluster. New tire pressure sensors, e.g. in winter tires, are automatically taught-in first time they are driven. For vehicles with RY2 the spare wheel is also equipped with a pressure sensor. The spare wheel sensing is activated after replacing with the damaged wheel.

Benefits:

- Enhances safety
- Lower fuel consumption
- Reduces tire wear

If the pressure is too low in one or more tires, a visual warning appears in the instrument cluster if the discrepancy is more than 14%. Early detection of pressure losses extends tire life and reduces running costs. Correct inflation pressures also optimize steering and braking performance.

S02/ S04	Standard front driver/passenger seat	Compared to Sprinter 906		
		Carry Over	Advanced	New

The standard seats come with the method to be adjust manually:

- Seat fore-and-aft adjustment of 10.24" (260 mm)
- Seat backrest inclination of 69°
- Seat height adjustment of 2.36" (60 mm)
- 2-way head restraint

Benefits:

Extended adjustment possibilities allow seat position to be adapted to suit individual requirements.

S20	Passenger seat foldable incl front airbags (SA6 + SH2)	Compared to Sprinter 906		
		Carry Over	Advanced	New

The foldable co-driver seat and its head restraint are directly attached to the partition with sliding door. This seat makes it easier for the driver to enter or exit the vehicle on the passenger’s side and provides easier access from the passenger door into the load department. The upholstery is always fabric maturin black without any sales code. For folding the seat cushion up or down the red button needs to be pushed first.

Benefits:

Eases the driver’s workload, particularly in the distribution sector. This seat offers advantages when the driver is only occasionally accompanied, for example in the distribution sector (e.g., when training a new driver).

S22	Armrest for driver's seat	Compared to Sprinter 906		
		Carry Over	Advanced	New

A tilt-adjustable armrest is fitted to the inboard side of the driver’s backrest. Retrofitting this armrest entails swapping the entire backrest.

Benefits:

More relaxed driving, particularly on long journeys. Allows the arm to be supported during continuous driving.

S23	Twin front passenger seat	Compared to Sprinter 906		
		Carry Over	Advanced	New

With code S23, a twin seat is installed on the passenger’s side instead of a single seat, allowing an additional seat for a third person. Both seats are equipped with three-point seat belts and head restraints. The seat cushion can be completely folded forward and therefore it’s possible to use the seat frame as a storage compartment.

Benefits:

- A third person can be seated in the cab
- Seat base frame can be used as a storage compartment
- Three-point belts on both co-driver’s seats

S25	Armrest for front passenger seat	Compared to Sprinter 906		
		Carry Over	Advanced	New

A tilt-adjustable armrest is fitted to the inboard side of the co-driver's backrest. Retrofitting this armrest entails swapping the entire backrest.

Benefits:

More relaxed driving, particularly on long journeys. Allows the arm to be supported during continuous driving.

S28	Armrest, driver's and passenger door	Compared to Sprinter 906		
		Carry Over	Advanced	New

The cushioned armrests on the driver's and co-driver's door, code S28, are optionally available. The faux-leather armrests offer an increased level of comfort and are mounted behind the door switch and handle.

S31	Convenience head restraints for pass. comp.	Compared to Sprinter 906		
		Carry Over	Advanced	New

The height and angle of the luxury head restraints for the passengers can be adapted to the individual requirements. They thereby facilitate a comfortable and relaxed seating position particularly on longer routes.

S62	Seat belts orange, driver and front passenger	Compared to Sprinter 906		
		Carry Over	Advanced	New

Orange safety belts replace the standard black safety belts for the driver and passenger (not with S23, twin passenger seat).

Benefits:

Makes it easier to see whether occupants are wearing their safety belts. The demand for orange safety belts comes from various fleet customers. Since these belts contrast significantly better with clothing than the standard black safety belts, it is much easier to tell from the outside whether the person(s) is/are buckled up.

S87	Driver's seat frame, low	Compared to Sprinter 906		
		Carry Over	Advanced	New

The reinforced seat base includes additional reinforcing sheets on and inside the seat box. The standard driver's seat base frame (height approximately 12 inch (305 mm)) is replaced by a version 3.34inch (85 cm) lower (height approximately 8.7 inch (221 mm))

Benefits:

Allows a custom driver's seat to be fitted. Basis for installation of a suspension seat or a swiveling seat ex-factory (e.g., SR8 + SB1) or by an upfitter (with or without SR8).

S88	Passenger seat frame, low	Compared to Sprinter 906		
		Carry Over	Advanced	New

The reinforced seat base includes additional reinforcing sheets on and inside the seat box. The standard driver's seat base frame (height approximately 12 inch (305 mm)) is replaced by a version 3.34inch (85 cm) lower (height approximately 8.7 inch (221 mm))

Benefits:

Allows a custom driver's seat to be fitted. Basis for installation of a suspension seat or a swiveling seat ex-factory (e.g., SR9 + SB2) or by an upfitter (with or without SR9).

S91	Passenger seat discontinued	Compared to Sprinter 906		
		Carry Over	Advanced	New

With code S91 the complete passenger's seat can be deleted. If requested, the seat frame can also be deleted via code S99. This equipment is only available for all vehicles >10.000 lbs. and provides unimpeded access from the passenger's door to the load compartment.

S99	Passenger seat pedestal - deletion	Compared to Sprinter 906		
		Carry Over	Advanced	New

The vehicle is supplied without a passenger seat base frame.

Benefits:

Provides unimpeded access from the passenger door to the load compartment. For custom vehicles such as buses or parcel delivery vehicles, where unimpeded access through the passenger door to the passenger/load compartment is required.

SA5	Airbag, driver front	Compared to Sprinter 906		
		Carry Over	Advanced	New

The driver airbag unit is integrated in the impact absorber of the steering wheel. In an accident it is inflated within milliseconds by a gas generator, reducing the risk of the driver's head or chest impacting the steering wheel during a frontal collision. The airbag acts in concert with the belt tensioner, which minimizes the slack in the safety belt. To ensure that the restraining force of the safety belt does not cause injury to the driver during a collision, a belt force limiter is integrated into the restraint system.

Benefits:

Reduces the risk and severity of head/chest injuries in a frontal collision. The risk and severity of a head and chest impact on the steering wheel are reduced in conjunction with a safety belt.

SA6	Front airbag, passenger	Compared to Sprinter 906		
		Carry Over	Advanced	New

The passenger airbag unit is located in the right side of the instrument. The passenger airbag is available for an individual seat, for a bench seat (S23) and only as a twin passenger airbag version. In an accident it is inflated within milliseconds by a gas generator, reducing the risk of the seat occupant's head or chest impacting the steering wheel during a frontal collision. The airbag acts in concert with the belt tensioner, which minimizes the slack in the safety belt. To ensure that the restraining force of the safety belt does not cause injury to the occupant(s) during a collision, a belt force limiter is integrated into the restraint system.

Benefits:

Reduces the risk and severity of head/chest injuries in a frontal collision. The risk and severity of a head and chest impact on the dashboard are reduced in conjunction with a safety belt.

SB1	Comfort driver's seat	Compared to Sprinter 906		
		Carry Over	Advanced	New

The comfort seats are characterized by their wide range of manually adjustment options:

- Seat fore-and-aft adjustment of 10.24" (260 mm)
- Seat backrest inclination of 69°
- Seat height adjustment of 2.36" (60 mm)
- Seat cushion inclination of 5.5°
- Seat cushion length of 2.36" (60 mm)
- 2-Way head restraint

The multitude of individual seat adjustments allows for a higher level of comfort e.g. by relieving strain on the back muscles and thus makes for comfortable driving.

Benefits:

- More precise adjustment of the seat to suit individual requirements
- Relaxed driving, particularly on long journeys

SB2	Comfort passenger seat	Compared to Sprinter 906		
		Carry Over	Advanced	New

The comfort seats are characterized by their wide range of manually adjustment options:

- Seat fore-and-aft adjustment of 10,24" (260 mm)
- Seat backrest inclination of 69°
- Seat height adjustment of 2,36" (60 mm)
- Seat cushion inclination of 5,5°
- Seat cushion length of 2,36" (60 mm)
- 2-Way head restraint

The multitude of individual seat adjustments allows for a higher level of comfort e.g. by relieving strain on the back muscles and thus makes for comfortable driving.

Benefits:

- More precise adjustment of the seat to suit individual requirements
- Relaxed driving, particularly on long journeys

SB3	Driver Suspension Seat, Comfort Version	Compared to Sprinter 906		
		Carry Over	Advanced	New

These suspension seats are based on the comfort seats code SB1/SB2 and have the same manually adjustable options. Additionally it´s possible to set the seat suspension and a vibration limiting. The body weight of 88 lbs. (40 kg) to 264 lbs. (120 kg) can be set with a hand wheel so that the seat suspension works optimally. With a higher weight, the seat suspension will become firmer and the seat will then not vibrates as much. If the seat vibrates often and significantly, it´s possible to engage vibration limiting in the lower area.

Benefits:

Enhances seat comfort, particularly on poor roads. Road shocks are absorbed by a combination of mechanical and hydraulic suspension, thereby reducing strain on the driver's back. This seat is recommended particularly for vehicles, which are regularly used in areas with poor roads condition.

SB4	Passenger suspension seat, comfort version	Compared to Sprinter 906		
		Carry Over	Advanced	New

These suspension seats are based on the comfort seats code SB1/SB2 and have the same manually adjustable options. Additionally it's possible to set the seat suspension and a vibration limiting. The body weight of 88 lbs. (40 kg) to 264 lbs. (120 kg) can be set with a hand wheel so that the seat suspension works optimally. With a higher weight, the seat suspension will become firmer and the seat will then not vibrate as much. If the seat vibrates often and significantly, it's possible to engage vibration limiting in the lower area.

Benefits:

Enhanced seat comfort, particularly on poor roads. Road shocks are absorbed by a combination of mechanical and hydraulic suspension, thereby reducing strain on the driver's back. This seat is recommended particularly for vehicles that are regularly used in areas with poor roads condition.

SB9	Driver's seat plus	Compared to Sprinter 906		
		Carry Over	Advanced	New

The driver's seat plus has a foam-filled cushion in the center section of the seat cover. The flatter seat cushion makes standing up easier for the driver and also getting in and out of the vehicle. The driver's seat features fore/aft, backrest and height adjustment. The fabric cover is the same as on the standard driver's seat.

- Seat fore-and-aft adjustment of 10.24" (260 mm)
- Seat backrest inclination of 69°
- Seat height adjustment of 2.36" (60 mm)
- 2-Way head restraint

Benefits:

- Makes standing up easier
- Easier to get in and out of the vehicle
- Recommended for delivery drivers with frequent stops

SE4/ SE5	Lumbar support, driver + passenger seat	Compared to Sprinter 906		
		Carry Over	Advanced	New

The lumbar support in the backrest of the driver's seat enables the seat to be adjusted to suit the driver's ergonomic comfort requirements. Both air bladders are adjusted pneumatically. The height of the bladders and the extent of the curvature can be controlled with a 4-way switch at the outside of the driver's seat. This optional feature is available for 3 seat variants. Seats fitted with lumbar support meet the criteria of the German AGR campaign for healthy spines.

SF1	Driver's seat electrically adjustable	Compared to Sprinter 906		
		Carry Over	Advanced	New

This electrical driver seat is based on the driver's comfort seat code SB1 and has the same adjustment options. The main difference is the head restraint height and seat cushion length. All adjustments can be made electrically using the switches on the control unit located on the driver's door.

The integrated memory function on the driver's side can save up to three different seat adjustment settings. When switching drivers, the required seat adjustments can quickly be made with the push of a button making it convenient for frequent driver changes. The electrically adjustable seats come standard with lumbar support, code SE5, and seat heating, code H16. The electrical seat heater with three settings allows for an individual adjustment of the seat temperature and can be operated using the button on the driver's door. The memory function does not save the individual mirror settings. The seat position is not saved on any vehicle key.

The optional 4-way lumbar support system supports the vertebral of the lower back and relieves the back muscles. The backrest contains two air cushions that can be inflated or deflated via two control valves, supporting an ergonomic posture. In addition, their position within the backrest is vertically adjustable. This setting is performed via the lumbar support adjustment switch on the door side of the seat cushion.

SF2	Passenger seat electrically adjustable	Compared to Sprinter 906		
		Carry Over	Advanced	New

This electrical passenger seat is based on the driver's comfort seat code SB2 and has the same adjustment options. The main difference is the head restraint height and seat cushion length. All adjustments can be made electrically using the switches on the control unit located on the co-driver's door.

The integrated memory function on the co-driver's side can save up to three different seat adjustment settings. When switching drivers, the required seat adjustments can quickly be made with the push of a button making it convenient for frequent driver changes. The electrically adjustable seats come standard with lumbar support, code SE4, and seat heating, code H15. The electrical seat heater with three settings allows for an individual adjustment of the seat temperature and can be operated using the button on the driver's door. The memory function does not save the individual mirror settings. The seat position is not saved on any vehicle key.

The optional 4-way lumbar support system supports the vertebral of the lower back and relieves the back muscles. The back rest contains two air cushions that can be inflated or deflated via two control valves, supporting an ergonomic posture. In addition, their position within the back rest is vertically adjustable.

SH1	Thorax-pelvis sidebag, driver	Compared to Sprinter 906		
		Carry Over	Advanced	New

The thorax-pelvis sidebags are complete integrated in the back rest of the driver's and co-driver's seat. A tag located at the back rest's outside shows the installation of the sidebags. In a side impact, the side airbags can help to protect the torso and pelvis of the driver and co-driver. In addition they can stabilize the whole body to reduce the risk of serious injury in case of an accident.

SH2	Thorax-pelvis sidebag, passenger	Compared to Sprinter 906		
		Carry Over	Advanced	New

The thorax-pelvis sidebags are complete integrated in the back rest of the driver's and co-driver's seat. A tag located at the back rest's outside shows the installation of the sidebags. In a side impact, the side airbags can help to protect the torso and pelvis of the driver and co-driver. In addition they can stabilize the whole body to reduce the risk of serious injury in case of an accident.

SH9	Airbag, driver/passenger window	Compared to Sprinter 906		
		Carry Over	Advanced	New

The window bags, fitted in the roof trim over the driver's and passenger doors, deploy in an accident with severe lateral acceleration/deceleration (e.g., a side impact). Within fractions of a second, the window bag fills with gas and positions itself like a curtain between the side window and the driver's/passenger's head.

Benefits:

Reduces the risk and severity of head and facial injuries in the event of a severe side impact. Window airbags reduce the risk of the driver/passenger on the collision side sustaining head and facial injuries in the event of a severe side impact. In conjunction with correctly fastened safety belts, they provide increased protection in the event of a severe side impact.

SJ3	Omission of windowbag, co-driver	Compared to Sprinter 906		
		Carry Over	Advanced	New

The window airbag units are installed along with the associated filling pipe at the inside of the respective roof frame behind the A-pillar paneling. The window airbags can protect the head area of the front passengers on the affected side in the event of a side impact. The code SJ3 deletes the co-driver's window airbag. In this case only the driver's window airbag is installed. This allows special-purpose vehicles with modified passenger section.

SK0/ SK1	Comfort head restraint, front driver/passenger	Compared to Sprinter 906		
		Carry Over	Advanced	New

The standard 2-way head restraints of the front seats can be replaced with the comfort variant. The comfort variants are characterized by manually adjustment options:

- Raise upwards
- Lower downwards
- Move forwards
- Move backwards

SK2	Seat occupancy sensor driver seat	Compared to Sprinter 906		
		Carry Over	Advanced	New

The driver's seat occupied recognition detects whether the driver's seat is occupied. Only the status "seat occupied" or "seat not occupied" can be detected. This feature is needed for the HOLD-function, Electrical parking brake, and DISTRONIC.

SR8/ SR9	Swivel base for driver's + passenger seat	Compared to Sprinter 906		
		Carry Over	Advanced	New

A swiveling base is fitted on the driver/ passenger seat base.

Benefits:

Allows a custom driver/passenger seat to be fitted. Can be turned around by about 180 degrees to face the rear. Basis for installation of a swiveling seat ex-factory works (e.g., SB1) or installation of a custom seat by an upfitter. Recommended for vehicles, which are to be equipped as an RV.

SW1	Seat belt deletion, passenger	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code SW1 is available for all vehicles >10,000 lbs. and includes the deletion of the passenger's height-adjustable three-point seat belt.

Benefits:

For custom vehicles (e.g., buses) that are not fitted with a passenger seat and seat base since the passenger's door is used as an entrance

SZ7	Storage net, driver's seat backrest	Compared to Sprinter 906		
		Carry Over	Advanced	New

Storage net installation on the back of the driver's seat backrest.

Benefits:

The installation of this equipment provides a further storage possibility, for instance, for newspapers.

SZ8	Storage net, passenger seat backrest	Compared to Sprinter 906		
		Carry Over	Advanced	New

Storage net installation on the back of the passenger seat backrest.

Benefits:

The installation of this equipment provides a further storage possibility, for instance, for newspapers.

T12	Sliding door two stage opening	Compared to Sprinter 906		
		Carry Over	Advanced	New

An intermediate stop that allows the sliding load-compartment door to stop at approximately 30.7" (780mm). The intermediate detent, lock the sliding door(s) in place around halfway when opening and closing. This occurs due to different sliding rail(s) and travel limiter(s) and allows that the door does not have to be opened fully when getting into or out of the vehicle. The door can still be opened all the way.

Benefits:

Additional stop point for sliding load-compartment door(s). Allows rear passengers to board and alight quickly, since the sliding load-compartment door does not need to be opened as far as the end position.

T16	Sliding door, passenger side	Compared to Sprinter 906		
		Carry Over	Advanced	New

Sliding load-compartment door on the right-hand side of the vehicle. The size of the door depends on wheelbase and roof height.

Width and height of door opening (W x H):

- Low Roof: 51.2" x 59.8" (1300 x 1520 mm) with 144 WB
- High Roof (D03): 51.2" x 71.2" (1300 x 1810 mm) with 170 WB

Benefits:

Access to passenger/load compartment

T19	Sliding door, driver's side	Compared to Sprinter 906		
		Carry Over	Advanced	New

Sliding load-compartment door on the left-hand side of the vehicle. The size of the door depends on the wheelbase and roof height.

Width and height of door opening (W x H):

- Low Roof: 51.2" x 59.8" (1300 x 1520 mm) with 144 WB
- High Roof (D03): 51.2" x 71.2" (1300 x 1810 mm) with 170 WB

Benefits:

Access to passenger/load compartment

T50	Electric closing assist right sliding door (soft close)	Compared to Sprinter 906		
		Carry Over	Advanced	New

To overcome the closing forces at the end of closing procedure, an electrically driven closing assist is used in the corresponding sliding door. A sliding door closing assist motor is located in the center of the C-pillar and move the striker in the corresponding door a defined distance to ensure that the sliding door can be closed without noise, free of vibration and without increased force. On vehicles with high roof, code D03, an electrically driven auxiliary lock is additionally installed in the corresponding sliding door.

T51	Electric closing assist left sliding door (soft close)	Compared to Sprinter 906		
		Carry Over	Advanced	New

To overcome the closing forces at the end of closing procedure, an electrically driven closing assist is used in the corresponding sliding door. A sliding door closing assist motor is located in the center of the C-pillar and move the striker in the corresponding door a defined distance to ensure that the sliding door can be closed without noise, free of vibration and without increased force. On vehicles with High

roof, code D03, an electrically driven auxiliary lock is additionally installed in the corresponding sliding door.

T55	Electrical sliding door right	Compared to Sprinter 906		
		Carry Over	Advanced	New

The Electrical operation of the right sliding door, enables the sliding door to be opened and closed electrically via a button on the center console, on the B-pillar or via the key. The sliding door can also be stopped and held in any position. The electric sliding door is provided with an obstacle detection function for improved protection of persons using the door. If the obstacle detection function detects any resistance during closing the sliding door, the closing process is interrupted and the door opens again.

The electrical operation function is deactivated during driving. An audible warning occurs when the sliding door is opened or closed. The closing assist is included without any sales code. If there has been a malfunction or if the battery has been disconnected, the sliding door can be disconnect from the electric motor using the release catch. Then the sliding door can be opened manually.

T57	Electric sliding step	Compared to Sprinter 906		
		Carry Over	Advanced	New

The electric step automatically extends when the sliding door opens, and retracts after the sliding door closes. This operation is possible without a use of the ignition key. The electric step is 47.24" (1200 mm) width and 11.42" (290 mm) depth. The maximum permissible capacity is 330 lbs. (150 kg). The aluminum step with a hot-dip galvanized cassette has a self-weight of 92 lbs. (42 kg).

The electric step includes an obstacle detection sensor at the front, so in the case of a collision, e.g. with the curb, it stops immediately. In this situation, a warning signal occurs and a visual warning signal will be shown on the display. To reactivate the electric step into the normal model, it is necessary to close the load compartment sliding door again. With this action, the electric step moves in and switch over into normal mode.

The access height for the step is 8.66" (220 mm).

Note: The ground clearance is reduced by approx. 3,94" (100 mm).

T60	Opening limiter, electrically operated sliding door	Compared to Sprinter 906		
		Carry Over	Advanced	New

The opening limiter is a fixed stop of the sliding door at an opening of 30.7” (780 mm). This allows passengers a faster step in and out of the vehicle.

Notice: Other than the manual operated sliding door with a two-stage opening T60 has a limited door opening. Hence the door can never be opened further than 30.7” (780 mm).

T74	Assist handle, B-pillar	Compared to Sprinter 906		
		Carry Over	Advanced	New

This grab handle(s) is installed vertically on each B-pillar if the vehicle is equipped with sliding door(s) and allows an easier entry to the load/passenger compartment through the sliding door(s).

Benefits:

Easy entry to passenger compartment. Easier entry for passengers.

T75	Door-mounted assist handles, driver & passenger	Compared to Sprinter 906		
		Carry Over	Advanced	New

The grab handle is installed vertically on the driver and passenger door of the vehicle, and facilitates getting into the vehicle providing another option to hold on the way.

The grab handles are automatically added with the following equipment:

- Code ZG3, All-wheel-drive, engage able, with low range

T77	Assist handle w/ partition	Compared to Sprinter 906		
		Carry Over	Advanced	New

Installation of a vertical grab handle on the partition.

Benefits:

Easy entry to load compartment.

T85	Assist handle, left rear door	Compared to Sprinter 906		
		Carry Over	Advanced	New

This grab handle(s) is installed vertically on the left D-pillar and allows an easier entry to the load compartment through the rear door.

T86	Assist handles, right rear door	Compared to Sprinter 906		
		Carry Over	Advanced	New

This grab handle(s) is installed vertically on the right D-pillar and allows an easier entry to the load compartment through the rear door.

T93	Sliding door right side deletion	Compared to Sprinter 906		
		Carry Over	Advanced	New

Via code T93, it is possible to delete the right-hand side sliding door and its entrance step.

Benefits:

Special interior fittings can be installed. Allows interior fittings to be mounted on both sidewalls.

U1A	14+1 seater version	Compared to Sprinter 906		
		Carry Over	Advanced	New

The 14+1 seater version, with four rows of seat benches, is for the passenger van (BM907.745) with weight variant of 9,480lbs (4,300kg). All benches include three-point seat belts and can be upgraded with available comfort packages and options.

U3S	Three-seater bench in passenger compartment, third row (narrow)	Compared to Sprinter 906		
		Carry Over	Advanced	New

A three-seater bench (narrow) is fitted in the **third** row of the passenger compartment on 14+1 passenger vans. All three seats are fitted with a three-point seat belt, and can be upgraded with available comfort packages and options.

U3Y	Three-seater comfort bench in passenger compartment third row (narrow)	Compared to Sprinter 906		
		Carry Over	Advanced	New

A three-seater comfort bench is fitted in the **third** row of the 14+1 passenger compartment and can be optionally selected. All three seats are fitted with a three-point seat belt and have additional seat bolter padding, allowing for enhanced seating comfort. Each row is individually reclinable as well as an individual recliner setting on each seat.

U62	Three seater bench in passenger compartment, first row (narrow)	Compared to Sprinter 906		
		Carry Over	Advanced	New

Three-seater bench in passenger compartment, **first** row, on left-hand side (in the direction of travel). All three seats are fitted with a three-point inertia-reel safety belts. ISOFIX child seat attachment points are on the two outer seats.

U74	Wall-side arm rest	Compared to Sprinter 906		
		Carry Over	Advanced	New

An angle-adjustable armrest is fitted to the outboard side (wall side) of the backrest of the passenger compartment bench seat.

Benefits:

Enhanced seating comfort. Armrest allows a more relaxed seating posture to be adopted.

U75	Aisle-side arm rest	Compared to Sprinter 906		
		Carry Over	Advanced	New

An arm rest is fitted to the aisle side of the backrest of the passenger bench seat, allowing for enhanced seating comfort.

UC3	Three-seater bench in passenger compartment, second row (narrow)	Compared to Sprinter 906		
		Carry Over	Advanced	New

A three-seater bench is fitted in the **second** row of the passenger compartment. All three seats are fitted with three-point inertia-reel seat belts. ISOFIX child seat attachment points are on the two outer seats.

UD6	Four-seater bench in passenger compartment, third row	Compared to Sprinter 906		
		Carry Over	Advanced	New

A four-seater bench is installed in the passenger compartment, **third** row. All four seats are fitted with three-point inertia-reel seat belts.

UD7	Four-seater bench in passenger compartment, fourth row	Compared to Sprinter 906		
		Carry Over	Advanced	New

A four-seater bench is fitted in the **fourth** row of the 14+1 passenger compartment. All four seats are fitted with a three-point seat belt and can be upgraded with available packages and options ordered as a comfort variant. (UY6)

UY1	Three-seater comfort bench in passenger compartment, first row (narrow)	Compared to Sprinter 906		
		Carry Over	Advanced	New

A three-seater comfort bench is fitted in the **first** row of the 14+1 passenger compartment. All three seats are fitted with a three-point seat belt and have additional seat bolster padding, allowing for enhanced seating comfort. This comfort variant can be equipped on Crew and Passenger Sprinters. Each row is individually reclinable as well as an individual recliner setting on each seat.

UY2	Three-seater comfort bench in passenger compartment, second row (narrow)	Compared to Sprinter 906		
		Carry Over	Advanced	New

A three-seater comfort bench is fitted in the **second** row of the passenger compartment. All three seats are fitted with a three-point seat belt and have additional seat bolster padding, allowing for enhanced seating comfort. Each row is individually reclinable as well as an individual recliner setting on each seat.

UY3	Four-seater comfort bench in passenger compartment, third row	Compared to Sprinter 906		
		Carry Over	Advanced	New

A four-seater comfort bench is fitted in the **third** row of the passenger compartment. All four seats are fitted with a three-point seat belt and have additional seat bolster padding, allowing for enhanced seating comfort.

UY6	Four-seater comfort bench in passenger compartment, fourth row	Compared to Sprinter 906		
		Carry Over	Advanced	New

A four-seater comfort bench is fitted in the **fourth** row of the 14+1 passenger compartment. All three seats are fitted with a three-point seat belt and have additional seat bolster padding, allowing for enhanced seating comfort.

V07	Cab rear wall liner	Compared to Sprinter 906		
		Carry Over	Advanced	New

Functional and visually appealing addition: The rear wall of the cab on the Sprinter cab chassis and with the Sprinter cargo, the inside of the partition wall to the load compartment, is fitted with additional paneling made of pressed fiber fleece. It provides sound insulation of the cargo compartment from the driver's cockpit. The rear wall paneling is required when ordering the following equipment:

- Code H04, Heat insulation

V21	Luxury interior trim	Compared to Sprinter 906		
		Carry Over	Advanced	New

The luxury interior paneling, code V21, in dark grey fabric gives the passenger compartment a representative look, and also improves the noise and heat insulation. The paneling is made of wood-dust filled polypropylene boards and a 0.12" (3.05 mm) thick layer of polyurethane foam, all lined with fabric. This paneling includes 5V USB-C charging ports with a smart phone holder for each row installed on the left side of the vehicle.

Benefits:

- Luxurious interior appearance
- Good sound and heat insulation
- Charging capabilities

USB-Port Overview

*Smartphone Integration (Apple Car Play/Android Auto)

V24	Pallet support in sliding door step	Compared to Sprinter 906		
		Carry Over	Advanced	New

A pallet support is available for the standard step in the load compartment (sliding door). The two plastic inserts are latched onto the step and close the gap between the closed sliding door and the floor of the load compartment.

Allows for the entire space between the sliding door and opposite wall to be used e.g. for heavy pallets. The pallet support is only available in combination with wood flooring (V43) and a partition (D50/D51). The pallet support has a cavity which can be used to store the optionally available straps (YK3 / YK4).

V25	Half height load compartment trim	Compared to Sprinter 906		
		Carry Over	Advanced	New

The side walls and doors of the passenger/load compartment are covered with 0.08" (2.03 mm) thick black wood-dust filled polypropylene boards from floor up to the height of the window sill girder, code V25. The wood-dust filled polypropylene boards are hydrophobic, washable, robust and 100 % recyclable.

Benefits:

- Protects metal surfaces from damage. The interior paneling provides enhanced protection for the metal surfaces of the load compartment against damage from the inside.

V31	Window pillar trim	Compared to Sprinter 906		
		Carry Over	Advanced	New

The standard painted window pillars can be lined, between the roof trim and the side trim, with matt black washable plastic paneling.

Benefits:

Enhances the look of the interior. Standard on passenger vans and optional on cargo vans.

V35	Wheel house covering	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code V35 includes black rubber covers for the wheel housings, protects them from damage, and provides additional noise insulation.

Benefits:

- Protects the wheel arches against damage
- Additional noise insulation

V36	Roof trim	Compared to Sprinter 906		
		Carry Over	Advanced	New

The roof can be covered with anthracite non-woven fabric, which improves the heat and sound insulation in the load/passenger compartment. Additionally the D-pillars are lined with matt black washable plastic paneling. There can be up to four interior lights installed and can be turned on/off via the front overhead panel or the first row interior light.

Benefits:

- Enhances the look of the interior
- Good sound and heat insulation

V39	Weight optimized plastic floor	Compared to Sprinter 906		
		Carry Over	Advanced	New

The load compartment floor consists of a three-dimensional center layer with bubble structure on which a TPO film (thermoplastic polyolefin) is laminated. The TPO film is durable, stain-resistant, slip-resistant and has low wear. The bubble structure of the center layer ensures a low weight while offering strong rigidity and good damping properties. Below that is an insulating foam layer. Support bars connect it to the vehicle floor. The plastic floor has a thickness of

0.31" (8 mm) and builds as tall as the wood floor (code V43).

Benefits:

- Durable, stain-resistant, slip-resistant and has low wear
- Protection against damage to the bare load compartment floor
- Additional heat and noise insulation
- Pleasant stepping surface for passengers
- Added payload over wood floor of about 66 lbs.

V40	Floor anchors for rear seat bench	Compared to Sprinter 906		
		Carry Over	Advanced	New

The V40 floor allows installing bench seats up to the fourth seat row of the passenger compartment (depending on the vehicle). To this end, the passenger compartment is already fitted with the appropriate mounting points and reinforcements in the body shop. For cargo vans ordered with this floor and without any seating in the rear compartment, there is no direct access to the mounting points. V40 is standard for passenger vans.

Benefits:
Bench seats can be retrofitted.

V42	Lashing rails, waist-level	Compared to Sprinter 906		
		Carry Over	Advanced	New

The sidewall tie-down rails on the hip rail/roof frame and the load securing rail system allow cargo to be safely secured to the sidewalls. The holes in the lashing rails are spaced at about 1" (25 mm) intervals where the four supplied anchoring lugs (studs) can be attached. The maximum tensile loading of the lashing points on the tie-down rail on the hip rail is 450 lb.ft/200 daN. Tie-down rails are not installed on the load compartment sliding door, but are available as part of the accessories range.

Load Rating is 2,500 N (562 ft-lbs.).

Benefits:
Provides a load restraint for bulky cargo. The lashing rails are used in conjunction with load-securing straps to prevent cargo such as windows from sliding around or falling over.

V43	Wood floor with 6 D-rings	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code V43, wood flooring, includes a plywood floor installed in the load compartment. The top of the wooden floor is coated with a grey, hardwearing and non-slip melamine resin film. The bolted lashing points fix the wooden floor down. The number of anchoring lugs utilized varies according to the length of vehicle.

- For vehicle length
- 144" WB: 8 lugs
 - 170" WB: 10 lugs
 - 170" WB EXT: 12 lugs
 - D-Ring load rating is 5,000 N (1,124 ft-lbs.)

Benefits:

- Easier loading/unloading and easier cleaning of the load compartment
- Additional heat and noise insulation
- Protects the underlying floor of the load compartment from damage. Facilitates cleaning and loading – particularly of heavy objects such as pallets – since the wood floor is level-surfaced. Provides additional heat and noise insulation.

V4A	Full paneling, right sliding door	Compared to Sprinter 906		
		Carry Over	Advanced	New

The matte black washable plastic paneling is available for the right-hand sliding door and for the hinged rear doors. This paneling completely covers all metal parts; therefore, improving a visual upgrade of the passenger compartment. In addition, it improves the sound and heat insulation.

V52	Loadable wheel arch	Compared to Sprinter 906		
		Carry Over	Advanced	New

The square shaped wheel arch covering provides protection for the wheel arches and increased storage space in the load compartment due to their flat top. Similar to the wood floor (V43), the wheel arch covers are made of 0.31" (8 mm) thick wood, and can carry a load of up to 440 lbs. (200 kg). The edges and corners are protected by aluminum strips and steel caps. The width of the load compartment is slightly reduced.

The wheel arch covers are fastened to both floor and side wall. They are only available in combination with the wood floor (V43). V52 reduces the payload by approximately 22lbs (10kg).

Note: V52 is only available for single tire models (1500/2500).

V85	Cigarette lighter + ash cup, front	Compared to Sprinter 906		
		Carry Over	Advanced	New

The smoker package, includes a cigarette lighter in the center console and an ashtray located in the upper part of the dashboard. The cigarette lighter is supplied with voltage via the terminal 15.

Benefits:

Helps keep the driver's section clean and tidy. Also serves as a small waste receptacle.

V94	Cable duct - side wall	Compared to Sprinter 906		
		Carry Over	Advanced	New

The ducts are standard for the cargo van and include the installation of cable ducts on the side wall

V95	Cable duct - rear portal	Compared to Sprinter 906		
		Carry Over	Advanced	New

The ducts are standard for the cargo van and includes the installation of cable ducts on the rear portal

VA1	Side wall paneling waist height pvc	Compared to Sprinter 906		
		Carry Over	Advanced	New

When ordering code VA1, the sidewalls and doors of the load compartment are covered with 0.08” (2.4 mm) thick black wood-dust filled polypropylene boards as well as a 0.12” (3.0 mm) thick layer of polyurethane foam from floor up to the height of the window sill girder.

Benefits:

Enhances the appearance of the load compartment. Protects the metal surfaces of the load compartment against damage from the inside and creates a high-class appearance.

VA3	Side wall paneling full hardboard	Compared to Sprinter 906		
		Carry Over	Advanced	New

The cargo compartment sidewalls, the sliding door(s) and the rear doors are lined with 0.189” (4.8 mm) thick gray polypropylene (PP) Con-Pearl plastic panels. The trim extends as far as the roof frame. The plastic panels are food-safe, moisture-resistant, washable, abrasion-resistant and recyclable.

Vans with a high roof (D03) without a window have a three-piece paneling on the side walls, sliding door(s) and rear-end doors, from the floor up to the belt rail as well as two pieces from the belt rail to the roof. Vans with a high roof (D03) with a window: two-piece paneling of the side walls, sliding door(s) and rear-end doors, from the floor up to the belt rail as well from above the window to below the roof

Benefits:

- Washable
- Food-safe
- Abrasion-resistant
- Recyclable
- Protects the interior sidewalls
- The floor-to-roof trim protects the metal surfaces inside the cargo compartment from shifting cargo.

VA5	Full paneling, hinged rear doors	Compared to Sprinter 906		
		Carry Over	Advanced	New

The matte black washable plastic paneling is available for the right-hand sliding door and for the hinged rear doors. This paneling completely covers all metal parts; therefore, improving a visual upgrade of the passenger compartment. In addition, it improves the sound and heat insulation.

VA7	Storage compart. W/ net in rear doors	Compared to Sprinter 906		
		Carry Over	Advanced	New

An additional storage compartment with nets is integrated into the door panels of the rear doors. This creates storage facilities for various items, such as Straps or work gloves, directly on the inside of both rear doors.

Benefits:
Additional storage

VC4	Cargo lashing rails, head height	Compared to Sprinter 906		
		Carry Over	Advanced	New

Bonded lashing rails are fitted along the side walls of the vehicle at hip height at approximately 28.5" (724 mm) and also the roof frame at approximately 64.4" (1636mm) with a distance between the two of approximately 38.9" (988 mm) below the roof frame. The holes in the lashing rails are spaced at approximately 1" (25 mm) intervals. Straps are not included in the specification, but are available as accessories. Load rating is 1,500 N (335 ft-lbs.).

Benefits:
Provides load restraint for tall bulky objects. The lashing rails are used in conjunction with load-securing straps to prevent tall bulky objects such as doors from sliding around or falling over.

VC5	Door Sill - protective edge	Compared to Sprinter 906		
		Carry Over	Advanced	New

When ordering this code an aluminum strip is mounted to the wooden floor in the entrance area of the right load compartment sliding door. In order to make the strip fit perfectly that part of the wooden floor is milled out and the aluminum strip inserted into the recess. The strip serves to protect the edge of the floor from damage when entering and exiting, or loading and unloading.

Benefits:

Protects the edge of the wood floor. The aluminum strip protects the edge of the wood floor from damage during loading.

Note: The lashing eyes in the sliding door entrance area are not level with the floor.

VF4	Fabric caluma black	Compared to Sprinter 906		
		Carry Over	Advanced	New

Seat cushion and back rest are decorated with a white striped pattern, while seat bolsters, head rest and back of the seat remain solid black

VF6	Artico man-made leather, black	Compared to Sprinter 906		
		Carry Over	Advanced	New

Seat cushion, back rest, seat bolsters, head rest and the back of the seat are covered in artificial leather. However, the seat bolsters (seat cushion only) of the driver's seat are covered in real leather. The low-wear artificial leather is easy to clean using water and a suitable soap-based detergent.

Note: For vehicles without partition wall, the back of the seat is covered in artificial leather, while for vehicles with partition wall the back of the seat will be covered in black fabric.

VF7	Fabric maturin black	Compared to Sprinter 906		
		Carry Over	Advanced	New

This Fabric Maturin Black, code VF7, is the standard upholstery material offered, and can optionally be replaced by either Fabric Caluma black, code VF4, or Artico Man-Made Leather Black, code VF6.

The following areas are covered in the Fabric Maturin black:

- Seat cushion
- Back rest
- Seat bolsters
- Head rest
- Back of the seat

VK8	Floor covering, plastic	Compared to Sprinter 906		
		Carry Over	Advanced	New

The weight-optimized plastic floor consists of a cap profile middle layer with plastic sheets laminated onto each side. The cap profile in the middle provides very good stability and sound insulation while at the same time being light-weight. A layer of foam backing underneath the plastic floor creates additional sound insulation. Supporting strips complete the vehicle floor. Depending on vehicle length, six to twelve lashing eyelets are mounted. These plastic sheets are slightly thicker while the middle layer is lower in height. That way, the covering is more robust while retaining the same overall height. In addition to the improved structure a TPO-layer (TPO = thermoplastic polyolefin) is applied to the top surface to make it water-proof, low-wear and slip resistant.

VV2	Lashing rails, floor-level (plus 4 anchors)	Compared to Sprinter 906		
		Carry Over	Advanced	New

The load securing rail system includes two rails that are attached to the floor in the load compartment. Each load securing rail is configured for a maximum tensile loading of 1124 lb.ft/500 daN. Straps are not included in the specification, but are available as accessory.

Benefits:

Allows loads to be firmly secured. The lashing rails are used in conjunction with load-restraining straps to provide quick, individually adaptable restraint for objects of varying sizes.

VV4	Additional ground weld studs	Compared to Sprinter 906		
		Carry Over	Advanced	New

An additional set of 4x ground studs will be added on to the vehicle to allow for appropriate grounding locations across the whole vehicle. These studs are in the following locations:

- Passenger seat box - 5/16" (M8)
- Driver seat box - 1/4" (M6)
- Center cross member on the underbody - 1/4" (M6)
- Rear right frame member - 1/4" (M6)

For more information, please refer to www.upfitterportal.com for 3D CAD data outlining the positions of these ground studs on the vehicle.

Note: these locations will vary slightly depending on the model and wheelbase of the vehicle

W02	Panel Van w/Windows All Round	Compared to Sprinter 906		
		Carry Over	Advanced	New

The panel van is fitted with windows all-around.

Benefits:

- Better visibility when driving and maneuvering
- Lets daylight into the cargo compartment

W16	2nd row, fixed window, driver side	Compared to Sprinter 906		
		Carry Over	Advanced	New

The single-pane safety glass window installed in the front of the left sidewall or in the sliding door lets more daylight into the vehicle interior and improves the situational awareness when driving and maneuvering.

Benefits:

- Allows more light into the load compartment
- Provides better visibility when driving

W17	2nd row, fixed window, passenger side	Compared to Sprinter 906		
		Carry Over	Advanced	New

The single-pane safety glass window installed in the front of the right side wall or in the sliding door lets more daylight into the vehicle interior and also improves the situational awareness when driving and maneuvering.

Benefits:

- Allows more light into the load compartment
- Provides better visibility when driving

W22	Fixed window, center left	Compared to Sprinter 906		
		Carry Over	Advanced	New

The fixed window at the center of the left side lets more daylight into the load or passenger compartment. It is made of heat-insulating single-pane safety glass.

Benefits:

- Allows more light into the load compartment

- Provides better visibility when driving

W23	Fixed window, center right	Compared to Sprinter 906		
		Carry Over	Advanced	New

The fixed window at the center of the right side lets more daylight into the load or passenger compartment. It is made of heat-insulating single-pane safety glass.

Benefits:

- Allows more light into the load compartment
- Provides better visibility when driving

W27	Fixed window, rear left	Compared to Sprinter 906		
		Carry Over	Advanced	New

The fixed window at the rear of the left side lets more daylight into the load or passenger compartment. The interior heats up less thanks to heat-insulating single-pane glass.

Benefits:

- Allows more light into the load compartment
- Provides better visibility when driving

W28	Fixed window, rear right	Compared to Sprinter 906		
		Carry Over	Advanced	New

The fixed window at the rear of the right side lets more daylight into the load or passenger compartment. The interior heats up less thanks to heat-insulating single-pane glass.

Benefits:

- Allows more light into the load compartment
- Provides better visibility when driving

W33	FMVSS 217 Emergency Exit	Compared to Sprinter 906		
		Carry Over	Advanced	New

In passenger vans, an emergency exit with two lift handles is installed. That allows for a quick exit during an emergency. The emergency window complies with FMVSS 217 regulatory requirements.

Benefits:

Offers an escape route in the event of a roll-over crash event

W54	Rear doors, opening to side wall	Compared to Sprinter 906		
		Carry Over	Advanced	New

With W54, hinges are installed that allow the rear doors to be opened to the side wall of the vehicle. The new hinges hold the doors in place on its own without the need of rubber, magnetic bumpers on the door/side wall. This makes loading much easier in confined spaces, for example on ramps. The newly developed door hinges engage automatically at 90° and in the maximum opening position.

Benefits:

Easier loading and unloading, particularly in confined spaces. Allows easy reversing with opened rear doors (e.g., at loading ramps), with a view to the rear in the exterior mirrors.

Note: For 170EXT models W54 is standard.

W5F	90 degree fixation point- rear doors	Compared to Sprinter 906		
		Carry Over	Advanced	New

When loading and unloading on an incline or, for example, in strong winds: with the optionally available additional blocks, the open rear doors of your Sprinter are mechanically fixed at an angle of 90°. This facilitates access to the load compartment and ensures that the rear doors do not close unintended.

Only available in conjunction with rear doors, opening to sidewall (W54)

W61	Windows in rear doors	Compared to Sprinter 906		
		Carry Over	Advanced	New

The rear doors are fitted with windows.

Benefits:

- Better rearward visibility
- Allows more light into the cargo compartment

W70	Black tinting (90%) for rear windows	Compared to Sprinter 906		
		Carry Over	Advanced	New

The rear windows, and all side windows in the rear section, are dark gray-tinted (approximately 90% tinting). The windshield and the windows in the driver's and co-driver's doors are green-tinted.

Heating due to solar irradiation of the interior through the rear windows is reduced by approximately 90% compared with non-tinted windows and by approximately 85% compared with green-tinted windows. Ninety-nine percent of ultraviolet radiation is blocked. If a rear air conditioning system is fitted, its effectiveness is increased. The tinted glass also conceals the passenger/load compartment from view. At the same time the tinting also enhances the look of the vehicle.

Benefits:

- Reduces heating of the interior
- Provides visual privacy in the rear section
- Enhances the look of the vehicle

W73	Bumper step, rear, grey	Compared to Sprinter 906		
		Carry Over	Advanced	New

A slip-resistant step is fitted at the rear of the vehicle, extending across the full width of the doors

W75	Step, wide, at rear end	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code W75 includes a hot-dip-galvanized steel step fitted at the rear of the vehicle. The step measures 63 x 11,81" (1,600 x 300 mm) (width x depth). Solid rubber mouldings on the outer corners provide protection when manoeuvring.

Benefits:

Facilitates loading and unloading at the rear of the vehicle.

W76	Bumper step, rear, spring-loaded	Compared to Sprinter 906		
		Carry Over	Advanced	New

A hot-dip-galvanized steel step is fitted at the rear of the vehicle, with fore/aft springing provided by four leaf springs. The leaf springs allow free fore/aft movement of the rear step in a forward direction (in the direction of travel). The step measures approximately 68.89" x 8.66" (1750 X 220 mm) (L x W). The spring-mounted rear step allows for an easy entry and exit. It can prevent or mitigate damage to the vehicle in the event of a collision with an obstacle such as a loading ramp if the vehicle is reversed without due care (the protective effect depends on the speed and angle of the impact).

Benefits:

- Impact protection
- Safe and easy access to load compartment

W78	Heated rear window(s) w/washers & wipers	Compared to Sprinter 906		
		Carry Over	Advanced	New

Water is supplied from the central washer fluid reservoir through flexible hoses to spray nozzles mounted in the wiper blades. The windows in the rear-end door provide a clear rear view, thanks to the wiper and washer system. If the front windscreen wipers are turned on, the rear window wipers are automatically switched on in addition when reverse gear is engaged or selected. The position of the wipers has changed from horizontal to vertical.

Benefits:

- Cleaning rear door windows
- Better rearward visibility
- Allows more light into the load compartment

W93	Side window openings w/o glass	Compared to Sprinter 906		
		Carry Over	Advanced	New

On request, the vehicle can be delivered without the side windows in the passenger compartment. When this deletion is requested, the hinged rear doors are equipped with two dark gray (approximately 90% coloration) tinted (code W70) and heated (code H22) windows. For vehicle transfer, the side openings are sealed with a white, protective shipping film.

Benefits:

- Retrofitting of other windows is made possible
- Sidewall only windows are missing for easy retrofit

W94	Window openings w/o glass	Compared to Sprinter 906		
		Carry Over	Advanced	New

No passenger compartment windows are fitted, including windows in the rear doors. For transport purposes, con-pearl plastic panels (code P08) close the apertures.

Benefits:

Allows easy fitting of different windows.

X90	Deletion of sprinter badge, left rear door	Compared to Sprinter 906		
		Carry Over	Advanced	New

The "Sprinter" badge on the left-hand rear door of cargo and passenger van is deleted.

Benefits:

- More room for promotional/company stickers or decals
- Easy wrapping

X93	Deletion of model badge, right rear door	Compared to Sprinter 906		
		Carry Over	Advanced	New

Deletion of the model identification on the right side hinged rear door.

Benefits:

More room for promotional/company stickers or decals.

XC8	VIN visible from outside	Compared to Sprinter 906		
		Carry Over	Advanced	New

The code XC8 includes a VIN-plate (Vehicle Identification Number) affixed on the left side of the dashboard underneath the windshield what is visible from the outside.

XM4	Acoustic package	Compared to Sprinter 906		
		Carry Over	Advanced	New

XM4 gets added in combination with the head units E3M or E4M. Since you can also control them via voice some additional noise isolation (in the areas marked blue) is installed in the vehicle to reduce road noise.

Cargo, Crew and Cab Chassis

Passenger Van

XO5	Digital owner's manual	Compared to Sprinter 906		
		Carry Over	Advanced	New

The digital owner's manual provides the customer with vehicle information via the multimedia system with 7" touch screen with navigation or satellite radio or the multimedia system with 10.25" touch screen that exceeds the standard paper format. The search function makes finding information easier and faster. Navigation through the document is self-explanatory, the digital owner's manual is furnished with high-resolution animations, and interactive pictures, which help, make the complex vehicle functions easier to understand. A multitude of animations can be streamed online. The customer can also bookmark content for easier access, e.g. the instructions for hooking up smartphones. The Owner's Manual is also available in the Mercedes-Benz Guides App, which can be obtained from common phone app-stores.

XW6	Front license plate deletion	Compared to Sprinter 906		
		Carry Over	Advanced	New

This option code XW6 deletes the front license plate.

Y10	First-Aid Kit	Compared to Sprinter 906		
		Carry Over	Advanced	New

The First aid kit will be stored in a plastic case in the co-driver's door panel and can be used to provide initial care for injured persons.

Benefits:

- Allows initial care to be provided for injured persons
- Conveniently located for quick access
- Takes up little space

Y26	Wheel chocks	Compared to Sprinter 906		
		Carry Over	Advanced	New

Cargo and passenger van models have a chock holder mounted on the D-pillar at the rear right of the cab. Cab chassis models have a chock holder mounted on the left at the frame end.

Benefits:

- Secures the vehicle against rolling on gradients
- Safe storage of the chock
- Additional security when parking the vehicle on an incline

Y43	Jack, Hydraulic	Compared to Sprinter 906		
		Carry Over	Advanced	New

The hydraulic jack facilitates jacking up the vehicle to change a tire. It is located in a bracket in the entrance area on the passenger's side and is easy to remove.

Benefits:

Easy tire changing.

Y45	Emergency flashlight	Compared to Sprinter 906		
		Carry Over	Advanced	New

The warning lamp increases the road safety in case of an accident or breakdown, because the flashing light provides timely warning for drivers of following vehicles. The lamp can be set to steady white light or on orange flashing light. The white light can be helpful when making minor repairs in the dark.

Y68	Paint preservative	Compared to Sprinter 906		
		Carry Over	Advanced	New

A white protective film is applied on the roof and bonnet of the finished vehicle that protects the paint from the environment.

Y69	Surface protection for stock vehicle	Compared to Sprinter 906		
		Carry Over	Advanced	New

Vehicles which exceed a storage period of 21 days after completion are covered with white protective foil. This adhesive foil is applied to the front, sides, rear and roof. The protective foil must be removed and the vehicle washed before delivery.

Y90	Jack deleted	Compared to Sprinter 906		
		Carry Over	Advanced	New

Deletion of hydraulic jack.

YK3	Cargo straps, D-rings	Compared to Sprinter 906		
		Carry Over	Advanced	New

Two tensioning straps with lever brace and lashing hook with an overall length of 137.79" / 3.5 m is be provided via code YK3. The maximum rated loads are for the draw out is 1461 lb.ft/650 daN and for the strapping 2922 lb.ft/1.300 daN.

Benefits:

- Load-restraining function
- Improves safety since the load cannot shift out of place easily

YK4	Cargo straps, lashing rails	Compared to Sprinter 906		
		Carry Over	Advanced	New

The package code YK4 includes four lashing eyes/double-studs (with-out straps) with maximum rated load of 800 daN, and two lashing straps with two double-studs (length 118.0" (3 m)) and maximum rated load with draw out of 1124 lb.ft/500 daN.

Benefits:

Enables the load to be restrained and prevents shifting.

Z5U	Vehicle class, incomplete vehicle (49 CFR, 571.3)	Compared to Sprinter 906		
		Carry Over	Advanced	New

Vehicles with code Z5U are classified as incomplete vehicle, which need to be completed by a body-builder. An Incomplete Vehicle Document (IVD) will be delivered with the vehicle. If any of the packages (F02/F03/F07) are ordered, the vehicle will become an "incomplete vehicle"! In this case, an upfitter will become the final stage manufacturer.

Please note that the involvement of an upfitter is required to register the vehicle. We recommend working with one of our ExpertSolutions Partners

For questions or further assistance, please reach out to vaninfo@mbusa.com

ZE6	Shelving prep	Compared to Sprinter 906		
		Carry Over	Advanced	New

Brackets welded to the roof bows and to the floor and allow shelves to be retrofitted easily. Avoids the need for drilling and welding to the frame.

Benefits:

Shelves can be retrofitted more easily. The pre-installed mounting points allow shelves to be retrofitted more quickly. No further drilling or welding of the frame and roof spars is required.

ZG3	4x4 - high range t-case w/ low gear	Compared to Sprinter 906		
		Carry Over	Advanced	New

Vehicles specified with all-wheel drive have flange-mounted the transfer case directly onto the main gearbox for the power transmission to the front axle, while the front-axle-drive has been kept very compact. The all-wheel drive can be engaged when the engine is running either when the vehicle is stationary and shifting lever is in position N.

By using a switch on the instrument panel, an electric motor engages a pair of spur gears in the transfer case. An indicator lamp in the switch informs the driver that the all-wheel drive is engaged and the instrument cluster shows the message “Four-wheel drive active”.

When all-wheel drive is engaged, the drive power of the Sprinter 4x4 is split 35:65 between the front and rear axles. The planetary gear unit acts as an inter-axle differential and balances the differences in rotational speed between the front and rear axle. The drive power will be shared over the front differential to the front wheels.. All the components of the standard-fit adaptive ESP remain operational even when all-wheel drive is selected and the acceleration skid control (ASR) is activated. Selecting the all-wheel drive improves the Sprinter’s traction, lateral stability and pulling power whereby the vehicle handling improves mainly on difficult surfaces (e.g. snow, ice, gravel).

The Sprinter 4x4 model’s all-wheel-drive system works with the electronic traction system 4ETS instead of mechanical differential locks. If one or more of the wheels lose traction on a slippery ground, 4ETS brakes the spinning wheels automatically with short pulses and increases the drive torque at the wheels that is offering a good traction. To do this, 4ETS uses the ABS wheel sensors. Automatic brake application 4ETS has the same effect as up to three differential locks: the inter-axle lock, the rear axle lock and the front axle lock.

Additionally a “Low Range” reduction gear is available for off-road use whereby the ratio is shorted by a factor about of 40 percent. The maximum vehicle speeds obtainable in the individual gears are reduced while traction is increased. The reduction gear is recommended where there is a high percentage of driving in mountainous regions, and also in cases where the vehicle is often used with a full payload, or for towing a trailer in off-road situations.

The “Low Range” can be engaged at the push of a switch on the instrument panel with the vehicle stationary, engine running, and the all-wheel drive is activated. An indicator lamp in the instrument cluster informs the driver that the “Low Range” is engaged. The reduction gear is straight-cut, making it extremely robust to maximize mechanical load ability.

With the 4x4, the body of the 2500 (BM907.x4x) is raised approx. 3.94” (100 mm) at the front and approx. 2.95” (75 mm) at the rear. For the 3500XD (BM907.x5x) it is raised approx. 3.94” (100 mm) at the front and approx. 1.77” (45 mm) at the rear. This allows for a proper approach-and break over angle and the wading depth increased. 4x4 vehicles with a permissible maximum weight up to < 10.000 lbs. get a front under ride protection and a front bumper with an integrated front spoiler.

Benefits:

- Expands operations in difficult terrain
- Allows particularly slow and sensitive driving

ZH4	Downhill speed regulation for 4x4	Compared to Sprinter 906	
		Carry Over	Advanced

The code ZH4, Off-road operation, includes a Downhill Speed Regulation (DSR). DSR supports the driver with the Low Range transmission ratio when the vehicle is driving downhill, off-road and on construction sites. DSR maintains a preset speed on downhill gradients by applying the brakes as required. The speed can be set between about 2.5 mph (4 km/h) and 11 mph (18 km/h) using the brake and accelerator pedals or the cruise control lever. When the vehicle is faster than 11 mph (18 km/h) off-road, DSR switches to standby mode. DSR remains activated but does not brake automatically. If the vehicle is slower than 11 mph (18 km/h), DSR sets the speed to the previously set speed. DSR switches off automatically when the speed is exceeding 28 mph (45 km/h). The Low Range transmission ratio is engaged, the indicator lamp in the instrument cluster lights up and the vehicle is stationary or not faster than 18 km/h.

1. Activates DSR and stores the current higher speed
2. Activates DSR and stores the current speed
3. Activates DSR and stores the current lower speed
4. Deactivates DSR

ZZ4	Brand content Mercedes-Benz, North America	Compared to Sprinter 906		
		Carry Over	Advanced	New

The Mercedes-Benz Sprinter is available in both US and Canada.

The main differences between the two brands:

Mercedes Me Connect Breakdown

Service	Hermes (JH3)	Other mandatory optional equipment	Further information

1	Mercedes me connect	Mercedes me connect is available for the Contiguous US, Hawaii, and Alaska with the new Sprinter (as of MY 19) and the Metris (as of September 2019 production, MY 20) with a connectivity module. Contact an authorized Mercedes-Benz dealership for more information.
3	Mercedes me connect App	In order to prevent distracted driving, the use of the Mercedes me connect App is not permitted while operating a motor vehicle in order to prevent distracted driving. If used while operating a motor vehicle, there is an increased risk of endangering oneself and others. Please follow your local laws and restrictions.
4	Communication Module for Digital Services	The availability of services in addition to the integrated Communication Module for Digital Services (LTE) depends on the network coverage of the mobile network provider. The Communication Module for Digital Services (LTE) is not available in the US Virgin Islands or Puerto Rico.
5	Communication Module for Digital Services	The Communication Module for Digital Services (LTE) is standardly equipped in the Sprinter (as of MY 19) and optionally equipped in the Metris (as of September 2019 production, MY 20).
7	Maintenance & Repair Management	In order for us to offer customer this service, data is transferred from the vehicle to the preferred Dealership. This data includes the vehicle identification number, mileage, service code (A or B), as well as remaining time and mileage until the next service is due and information on the brake system and coolant.
8	Accident and Breakdown Management	When customer requests the service, the vehicle data and location are automatically transferred to the CAC. Accident and Breakdown Management is only available in conjunction with the Emergency Call System. The Communication Module for Digital Services (LTE) and the emergency call button are required to use the Accident and Breakdown Management service.
9	Emergency Call System	When the Emergency Call System is triggered, the following data are automatically transmitted: vehicle identification number, GPS position, travel direction, time of the emergency call, language setting, and number of occupants in the vehicle. The Emergency Call System is activated from the moment the vehicle is delivered to the customer following a sale. No separate terms of use have to be accepted. The Communication Module for Digital Services (LTE) and the emergency call button are necessary for use of the Emergency Call System service.
10	Software Updates	Update times, content, and installation times can vary. These are activated when the vehicle is delivered. Updates to the Communication Module for Digital Services (LTE) are automatic, as otherwise certain applications might no longer work. You can access the current status of the software versions in your vehicle via the Mercedes me connect.
16	Internet in the Car	The wireless Internet in the Car is provided by T-Mobile and created via built-in SIM card. A contract must be made with T-mobile in order to access data services, and this contract can be made via the provider's system or infotainment system. In addition to a data contract with T-Mobile, either an MBUX multimedia system with 17.8 cm (7-inch) touchscreen and navigation or satellite radio or the MBUX multimedia system with 26 cm (10.25-inch) touchscreen is required for the Internet in the Car service. Additional costs may apply depending on the amount of data used.
17	Live Traffic Information	The information from this service is shown on the touchscreen of the multimedia system. Live Traffic Information can only be used in conjunction with the multimedia systems MBUX multimedia system with 17.8 cm (7-inch) touchscreen and navigation or the MBUX multimedia system with 26 cm (10.25-inch) touchscreen.

18	Car-to-X Communication	A valid subscription to Live Traffic Information is necessary to use Car-to-X Communication. Car-to-X Communication can only be used in conjunction with the MBUX multimedia system with 17.8 cm (7-inch) touchscreen and navigation or MBUX multimedia system with 26 cm (10.25-inch) touchscreen. Only the data of vehicles directly affected by the event and equipped with Car-to-X Communication are processed, therefore you may not always receive a timely warning of hazards through this system.
19	Online Map Update	The Online Map Update service is only available in conjunction with the MBUX multimedia system with 17.8 cm (7-inch) touchscreen and navigation or MBUX multimedia system with 26 cm (10.25-inch) touchscreen. The service must first be activated and the region for the map update selected in the Mercedes me connect Portal.
20	Navigation Functions	You can only use the Navigation Functions service in conjunction with the MBUX multimedia system with 17.8 cm (7-inch) touchscreen and navigation or the MBUX multimedia system with 26 cm (10.25-inch) touchscreen. Before use, some of the applications must first be activated via the Mercedes me connect.
21	Multimedia Functions	You can only use the Multimedia Functions service in conjunction with the MBUX multimedia system with 17.8 cm (7-inch) touchscreen and navigation or the satellite radio or with the MBUX multimedia system with 26 cm (10.25-inch) touchscreen. Before use, some of the applications must first be activated via the Mercedes me connect. For various functions (Internet Radio and Browser), additional data volume is necessary which can be purchased via the Internet in the Car service.
22	Internet Radio	For Internet Radio to work a contract must be made with T-Mobile in order to access data services, and this contract can be made via the infotainment system in conjunction with the service Internet in the Car.
23	Remote Door Lock/Unlock	The Remote Control function via the Mercedes me connect App makes it possible for you to view the status of the doors and windows. The driver is also able to unlock the vehicle via the Mercedes me connect App.
