A50	Front axle reinforced	Includes an increased load capacity of the front axle, where heavier bodies and equipment can be fitted. The higher capacity front axle caters to heavier cabs and heavier special equipment (e.g. for fire-fighting vehicles and ambulances).	
No Factory Code	Base Standard Factory Suspension	Description	Ride comfort due to reduced roll stabilization.
		Benefit	The Base Standard Factory suspension, has an adapted front suspension for a lower and more comfortable entry. With the removal of the rear stabilization bar it allows for an overall comfortable ride with reduced roll.
CB7	Stabilization Level I	Description	Roll Stabilization with height body damping
		Benefit	CB7 compensates for rolling behavior due to higher center of gravity of loads or bodies. Torsion bars with an increased diameter are added to the front and rear axels. Furthermore, shock absorbers with an adapted characteristic are installed.
CB8	Stabilization Level II	Description	Enhanced roll stabilization with higher body damping compared to CB7
		Benefit	Additional roll stabilization and body damping compared to CB7. Increases torsion bar diameters at the front and rear axels and provides an adapted shock absorber characteristic. Furthermore, rear axle springs with increased rigidity are installed.
CB4	Stabilization Level III	Description	Designed for vans with a intense rolling behavior due to a much heavier load and higher center of gravity. (i.e. recreational vehicles)
		Benefit	CB4 comes with larger diameter stabilizers, shock absorbers and with characteristics that are adapted for an increased rebound and compression curve. Furthermore, the leaf springs are increased in rigidity.
CB1	Suspension for comfort and load protection	Enhanced comfort due to adapted damper characteristics and the use of progressive spring characteristics.	
CT1	Rear spring vibration absorbers	Includes vibration absorbers fitted on the left and right rear spring and lowers the resonant vibrations of the rear springs, thus hindering noise development.	

Specialized Suspension Options			
Code	Title	Explanation	
CE8	Raised rear body mounts	Raised body on rear axle (35mm/1.4")	
B01	ESP for increased Center of Gravity	Description	Adjusted braking and handling characteristics for vehicles with increased center of gravity.
		Benefit	With code B01, the ESP* is optimized to reduce the vehicles tilt tendency with a total center of gravity of <u>more than 1000 mm (39.4 inches)</u> . It is essential to ensure that the vehicle is equipped with the right suspension and tires. With B01 it is required to also add CB8 or CB4.
X2R	Conversion to RV requirement	MBUX Timed Switch-off extended to 6 hours and B01 is automatically added to this code.
