

KANN Adapter Attachment

Collect both Commercial Rear Load & Front Load Containers with the same Truck

With the patented KANN Adapter attachment, the same front loader can load both commercial front load and rear load containers interchangeably without the need for the operator to leave the cab of the truck.

The KANN Adapter allows existing front-load trucks to collect both standard front-load and rear-load containers up to 6 cu. yd. capacities. The flexibility of the KANN Adapter to handle different containers increases the versatility and value of any front loader.

KANN Carry Can Attachment

The KANN Front Loader can accept a residential carry can as a fork mounted attachment on a commercial unit or as a trunnion mounted attachment as a fully dedicated residential front loader.

The KANN Residential Front Loader is engineered for fast, dependable and quiet operation and can be purchased in manual, semi-automated or automated loading configurations. The residential container can be added to an existing commercial front loader as a fork mount so the unit is capable of collecting both residential and commercial containers or as a dedicated trunnion mount attachment for residential collection only.

KANN Residential Front Loader with Automated Carry Can Attachment

The KANN Front Loader can accept a residential carry can attachment as a fork mounted attachment on a commercial unit or as a trunnion mounted attachment as a fully dedicated residential front loader.

The KANN Residential Front Loader is engineered for fast, dependable and quiet operation and can be purchased in manual, semi-automated or automated loading configurations. The residential container can be added to an existing commercial front loader as a fork mount so the unit is capable of collecting both residential and commercial containers or as a dedicated trunnion mount attachment for residential collection only.

KANN Multi-Compartment Residential Front Loader CoCollector with Automated Carry Can
