

Wood Flooring

Lumber is the most economical and affordable decking solution for end users, and provides a durable, yet easy-to-replace decking option, while still maintaining an entry-level price point. CM Truck Beds uses 2" pine wood flooring.

Blackwood Flooring

Blackwood decking uses an innovative rubber-infused lumber to provide improved durability, stain-resistance and traction, even in wet conditions. With the tactile surface of Blackwood, your cargo is less likely to shift in transit. The industrial-grade rubber used in Blackwood is the same material used at gun ranges to absorb bullets – so you know it's tough!

Rubber Wood Flooring

Rubber wood is environmentally friendly, stronger than other composites, and impervious to fluids, mud, oil and UV rays. Rubber boards will not crack, rot or split and they have a traction surface that increases safety. They can be cut with a saw, are easily installed, and are easy to clean.

Cargo Light

This option provides truck bed lighting so users can see their tools and equipment on the deck. When your oilfield or construction job runs long into the night, trust in CM Truck Beds.

Aluminum Underbody Toolbox

CM's durable aluminum underbody toolbox provides plenty of storage space and weather protection for equipment and tools, keeping your gear safe, organized and out of harm's way.
