

No other system captures the quality or quantity of data that PANORAMO SI® 4K does. With its unique ability to capture every inch of the manhole, you will never miss an observation. Keep your employees safe, increase the productivity of your crews, and provide clear data that helps system owners make informed decisions. The PANORAMO SI® 4K can be used as an add-on to your existing PANORAMO® system or can be used as a portable stand-alone unit with our new KW SI cable reel. This newly designed, small cable reel can be installed in the vehicle or taken out of the vehicle and used in battery operation. This allows access to manholes that you could never reach before in a traditional inspection vehicle.
