Tony Bailey, Government Manager – Tony.Bailey@ProLogicITS.com

NCSA Technology Procurement 2023-2024

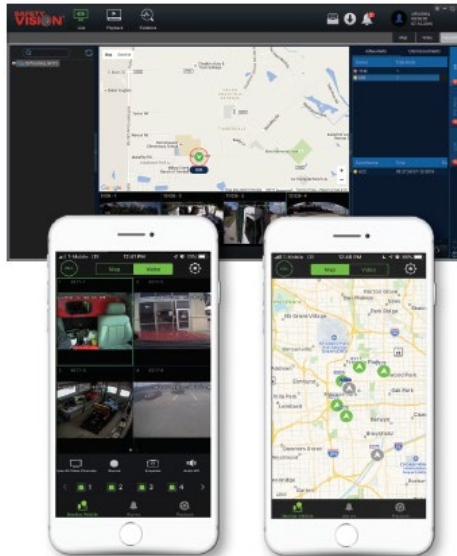

Effective March 16, 2023 – March 15, 2024

LIVE LOOK-IN / WIRELESS DOWNLOADS

Connecting a modem that has cellular and/or wi-fi capabilities to the recorder, enables two optional upgraded features:

- 1 **Live Look-In:** From anywhere in the world, you can view a vehicle in realtime from a smartphone, tablet, or computer.

Features

- Live GPS tracking of whole fleet
- Live encrypted video and audio streaming
 - Remotely playback any video stored on DVR's local storage device
 - Record live video directly to your mobile device
- Receive event and system health alerts via email

Requirements

- A cellular modem is required for each recorder.
- The customer must acquire a SIM card with a data plan from the cellular provider of choice (*billing is through the cell provider*).
- Foresight Pro backend software must be hosted on a virtual or physical server to provide secured access to live data (*the server can be hosted by Safety Vision or End-User for a small yearly fee*).

- 2 **Wireless Downloads:** This is an automated process when the vehicle pulls within range of a network connected access point, transmitting encrypted video and data from the recorder to a server.

Features

- Proactive health reports via email
- Event auto download
- Remotely schedule video downloads
- Wirelessly update entire fleets firmware and configuration settings
- Save man hours and minimize operational errors.
- Remotely review any video stored on the recorder before wirelessly downloading the desired video clip.
- Chain of custody

Requirements

- A wi-fi modem and antenna for each recorder.
- Must have network infrastructure in place such as an access point and antenna connected to a sever to transmit and store offloaded data.
- Foresight Pro backend software must be hosted on a virtual or physical server to conduct wireless downloads.

Notes

- *The Wireless Download function is not designed to offload every minute of video from each day. The function is to offload all events and requested video clips.*

WIRELESS OVERVIEW

NCSA Technology Procurement 2023-2024

Effective March 16, 2023 – March 15, 2024

HOW IT WORKS...

Cameras can be placed anywhere interior / exterior of the vehicle. An optional monitor allows the driver to see all camera views. The recorder, monitor & cameras are all powered up upon ignition. All data is continuously recorded from start of ignition until the vehicle is turned off. Once the vehicle is turned off, you can set a shutdown delay timer to record for an additional 10, 20, 30+ minutes.

FEATURES OF OBSERVER 4401-HVR, 4112-HVR RECORDERS

- **Cameras (1080p / 720p resolution)**
 - All cameras have built-in IRs to see in 100% darkness.
 - Built-in microphones to record audio.
 - Day/night sensors for automatic transition with light.
- **GPS (cellular is not required for any GPS features)**
 - Track the location of the vehicle/route history.
 - Speed of vehicle
 - Time and date of event
- **Accelerometer**
 - Measures g-forces and creates events based on acceleration, hard braking, swerves, and impact.
- **8 Custom Sensors**
 - Monitor and record sensor data from any 5-12V source activated such as brakes, turn signals, emergency flashers, locks, etc.
- **UPS (Uninterrupted Power Supply)**
 - Allows recorders to stay powered on, in the event of a complete power loss, protecting recorded video and data. Also shields against voltage spikes found in harsh mobile environments.
- **Panic Button**
 - Manually tags video to create an event (*built-in to 7" touch screen monitor*)
- **Events**
 - Flags specific happenings - i.e. panic button, overspeed, location / geo-fence, g-force, or any of the 8 custom sensors
 - Pre / post event recording

RECORDER | OPTIONS

OBSERVER™ 4401 HVR

- Hybrid Video Recorder
- 512 GB Max Storage
- 1080p Max Resolution
- 5 Cameras Supported

OBSERVER™ 4112 HVR

- Hybrid Video Recorder
- 2 TB HDD or SSD Max Storage
- 1080p Max Resolution
- 12 Cameras Supported

OBSERVER™ 4816 NVR

- Network Video Recorder
- 16 IP Cameras Supported
- 10 TB HDD or SSD Max Storage
- 1080p Max Resolution
