## THE CASE FOR AEDS

### Survival increases with early intervention

Research shows that the probability of survival increases dramatically when CPR is performed and when an AED is applied before an ambulance arrives.<sup>1</sup>

### Where is the AED?

Too often, the answer is, "We don't have one." Sadly, the same research that demonstrated a nearly fivefold increase in survivability (from 5% to 24%) when an AED is used, also showed that an AED is available only 2% of the time.

# ProLogic ITS POWERHEART® G5

#### Intellisense™ Defibrillation Pads

Non-polarized pads can be placed in either location on the chest for simple, fast placement.

#### RescueCoach™

User-paced voice and text prompts guide rescuers through each critical step of the rescue, including CPR instruction.

#### USB Data Download

90 minutes of rescue data available via USB download.

#### Dual Language

Change from primary to secondary language with the push of a button, without delaying or interrupting the rescue.

#### Automatic Self-Testing

Conducts daily self-tests on pads, battery and internal circuitry to ensure your AED is always Rescue Ready®.

#### Intellisense™ CPR Feedback

Four distinct text and voice corrective CPR prompts for rate, depth and recoil.

Whether you are an experienced rescuer or a first-time responder, you will appreciate how the Powerheart G5 AED combines ease of use, reliability, and advanced technologies to help victims survive sudden cardiac arrest.

The Powerheart G5 AED with Intellisense CPR provides real-time, Guideline-driven feedback to ensure delivery of high-quality compressions. One-button duallanguage functionality and daily self-tests give rescuers the confidence to act.

## POWERHEART® G5

ZOLL®

# DESIGNED FOR UNEXPECTED HEROES™

When someone is the victim of sudden cardiac arrest, their survival depends on high-quality CPR and a rescuer with an AED.

**When there's a call for help, will you be ready?**

ZOLL®

# ARE YOU PREPARED TO HELP IN A HEARTBEAT?

It happens in a split second: A person collapses – the victim of sudden cardiac arrest – and the clock starts ticking. You call for help and medical personnel are on their way. But precious seconds are racing by. The victim's best chance for survival depends on immediate CPR and a rescuer with an automated external defibrillator (AED).

CPR plus early defibrillation can **more than double the rate of survival** from out-of-hospital cardiac arrest.  
-2015 AHA Guidelines<sup>2</sup>

## THE POWER TO HELP

The latest guidelines from resuscitation councils worldwide are clear: Successful defibrillation must be supported by high-quality CPR.

The AED's first heart analysis is critical. If it calls for no shock, only high-quality CPR can lead to a shockable rhythm on the next heart analysis. High-quality CPR provides a struggling heart with oxygenated blood needed to help restore a normal rhythm.

**“...monitoring of CPR quality is arguably one of the most significant advances in resuscitation practice in the past 20 years and should be incorporated into every resuscitation and every professional rescuer program.”**  
- American Heart Association CPR Quality Consensus Statement<sup>3</sup>

## DESIGNED FOR UNEXPECTED HEROES™

The survival rate from sudden cardiac arrest (SCA) is less than 1% worldwide.<sup>4</sup> According to the American Heart Association (AHA), high-quality CPR, along with early defibrillation, can help improve SCA survival rates.<sup>5</sup>

The Powerheart® G5 AED is the only AED to combine real-time CPR feedback with dualLanguage functionality, user-paced rescue prompting, and fast shock times.

**“I was not expecting the AED to walk me through doing compressions. I was sure thankful for that ‘press, press, press’.”**  
Mark Tucker, Rescuer  
CM Tucker Lumber in Pageland, SC

### Real-Time CPR Feedback

The Powerheart G5 AED uses Intellisense CPR (ICPR) technology to monitor CPR chest compressions, providing rescuers with four distinct corrective voice and text prompts: Press Slower, Press Faster, Press Softer, and Press Harder and Fully Release.

### Rescue Ready®

The Powerheart G5 AED performs comprehensive daily self-testing to ensure it is ready to rescue. Studies have shown that approximately 46% of AED failures are due to pad, pad connector, or battery power problems.<sup>6</sup> The Powerheart AED self-tests detect and help prevent these issues.

### User-Paced Rescue Prompts

RescueCoach® prompts guide users step-by-step through the rescue process. The AED recognizes actions taken and ensures that the rescuer completes every critical task before moving on to the next.

### Dual-Language Capabilities

With a touch of a button, CPR Instruction, ICPR corrections, and AED prompts can quickly switch from the primary language to a pre-programmed alternate language without delaying the rescue.

# MODERN MEDICAL SUPPLIES PAIRED WITH AN INNOVATIVE APP

Your officers are often the first to arrive to a medical emergency. Some emergencies, like severe bleeding and airway complications, can become fatal within a few minutes — before EMS arrives. Do your officers have the resources and knowledge to help at the scene? ZOLL® can help make sure they do.

Mobilize™ from ZOLL is a set of interactive trauma and medical emergency kits designed to empower bystanders to help victims during unexpected medical emergencies.

**Mobilize Rescue app:** Helps untrained bystanders provide high-quality medical care by following the real-time diagnostic prompts in the interactive app. The algorithm and treatment directions are based on protocols and best practices from the American Heart Association, Tactical Emergency Casualty Care (TECC), and the American College of Surgeons.

**High-quality supplies:** Mobilize trauma kits contain modern medical supplies to treat and manage a wide range of emergencies from severe bleeding and chest trauma to seizures, allergic reactions, and more.

Trauma is the number one cause of death in ages 1 to 46, accounting for **30% OF ALL LIVES LOST IN THE US<sup>1</sup>**

Blood loss must be stopped ASAP. Bleeding can become fatal in as little as **3-5 MINUTES<sup>2</sup>**

**30,000 TRAUMATIC DEATHS**

could be prevented each year with increased access to trauma care.<sup>3</sup>
