NCSA TECHNOLOGY PROCUREMENT BID 23-02-0222R

BEACON - RADIO FREQUENCY DEVICE

BRIEF DESCRIPTION AND CAPABILITIES

For locations with insufficient GPS coverage or for supervised individuals who spend the majority of their time at home, we recommend our in-home Beacon. Beacon is a completely self-contained, short-ranged Radio Frequency (RF) transmitting station device that communicates via RF signal to the assigned ReliAlert™XC4 device(s) which in-turn transmits the supervised individual's status and data information via cellular networks to our central host system, IntelliTrack.

Authorized Agency users can swiftly and easily create customized curfews and set schedules for each supervised individual. In addition, authorized users have the ability to quickly create overrides on set curfews to accommodate single or recurring appointments. This feature not only enables the Agency to restrict a supervised individual to a specific location such as a house but also allows the supervised individual to attend court-ordered appointments/programs as well as participate in additional work/school activities.

Discounted Catalog Daily Lease Rate Pricing for Beacon includes: Initial, ongoing and refresher training for Agency staff. Full warranty coverage on routine maintenance and standard repairs. Shipping & handling of Beacon device(s) and accessories. **Pricing is per device, per day.*
