

TKB-1 AED | Patrol PC® UltraRugged® Thumb Keyboard

Purpose-built for First Responders. Made in the USA.

Our patent pending, multi-function handheld device incorporates keyboard(s), speed buttons, signature recording (for e-ticketing) and other useful features into a pocket-sized device. Designed primarily for out of vehicle use, this compact keyboard solution is easy to carry and easy to use. Facilitates superior ergonomics, reduced distraction and improved scene control. An officer safety and efficiency enhancing product that is especially useful in special deployments – motor officers, traffic enforcement, undercover units, special ops and fire rescue.

- Freestanding device for wireless data entry and program launching replaces cumbersome Bluetooth keyboards and on-screen keyboards that steal image space
- Configurable on-screen keyboard can be tailored to individual user preferences
- User programmable hot keys to quickly launch critical programs
- Low power, sunlight readable screen requires minimal charging
- Customizable signature pad for e-ticketing and document signing. Records real time signature process for verification purposes and stores data until downloaded at the station
- Built-in red and white lighting for scene control and overall safety
- Features machined aluminum case, chemically strengthened glass, capacitive touchscreen, Bluetooth 5.0 low energy, HID compliant mouse/keyboard drivers (no specialized drivers required)
