**March 2023**

# EP's Safety & Wellness module

## OVERVIEW

EP Safety & Wellness allows leaders to automatically track critical incidents, injuries and exposures while also enabling support resources like a peer assist team or your Health & Safety administrator. *EP Wellness* includes:

### Incident Reporting

This powerful tool empowers employees and supervisors to log exposures, injuries and **critical incidents**

### Wellness Resource Library

Customizable resource library capable of posting videos, documents or other files related to Safety & Wellness

### Data Reporting

The data reporting page allows analysis to determine trends, root causes and identify employees at risk. Compare injuries month-over-month or year-over-year to determine if your action-plans/training made a difference.

### Safety & Wellness Point of Contacts

Ensure your employees know who their support personnel are. List contact info and profiles of your Peer Support team, Chaplain, Physical Fitness instructors, etc...

### Case Management

Sitting on a encrypted server and managed with strict permissions, we enable your organization to track injuries and exposures. Managing light-duty cases and occupational health matters is now streamlined.
