

OMJC POP-UP KNOCKDOWN

KDPTS-XL

A CRISIS RESPONSE SOLUTION

The AC powered Knockdown (KDPTS-XL) functions as an emergency replacement when a traffic pole is knocked down at a permanent intersection. The 12", ITE approved signals, can quickly be placed in positions mandated by the MUTCD at the mere push of a button. The KDPTS-XL hard-wires into the preexisting intersection infrastructure. Because the footprint is only 6' wide (the narrowest in the industry), it can fit almost anywhere. The KDPTS-XL is adjustable from 9'-25' depending on the application and situation. Optional 4 & 5 section signals with left turns in the overhead position are available.

KDPTS-XL • STANDARD FEATURES

ARM EXTENSION OPTIONS

9-25'

SIGNAL HEAD CONFIGURATIONS

Countless configurations depending on arm size including 1-3 overhead signals

3 section side of mast

12" LED, ITE compliant
